

## New Features for:

**Release:**Latitude 23.1

**Built on:**04-May-2023

## New features included in release 23.1

The table below summarizes the new features added in this release

SCR	Description/Details
-----	---------------------

### Component: Enhanced Dashboard - Dashboard

<b>LAT-11889</b>	<p><b>Update in Dashboard to use System Queries</b></p> <p>Updated Dashboard to only show system queries when setting up a Saved Query as a Datasource. Any user queries associated with existing dashboards have been migrated as system queries and also created copies as user queries.</p>
------------------	--

### Component: Latitude

<b>LAT-11917</b>	<p><b>Web Access and Dashboard will have capability to perform SSO authentication.</b></p> <p>User can login to Web Access and Dashboard leveraging the SSO configuration.</p>
<b>LAT-11903</b>	<p><b>Change the misc extra data condition type to add title as part of the misc extra join.</b></p> <p>Created a new condition type that includes title in inner join for misc extra data condition type.</p>
<b>LAT-11900</b>	<p><b>The existing permission for System Configuration will allow user to configure setting for SAML/SSO Configuration</b></p> <p>User with System Configuration permission enabled can setup or modify SAML/SSO Configuration.</p>
<b>LAT-11857</b>	<p><b>When Tokenizer is configured against the same database from multiple servers, the pruning and the renewing process will corrupt the tokens</b></p> <p>Tokenizer can no longer be configured for a same database from multiple instances. If an instance of Tokenizer is running and if another instance of Tokenizer tries to connect to the same DB, the application will prevent it from happening and throw an exception</p>
<b>LAT-11819</b>	<p><b>Added "Purge Process" feature to physically delete all references of account from database</b></p> <p>Added "Purge Process" feature to physically delete all references of account from database. It contains database and application changes</p>

### Component: Payment Vendor Gateway

<b>LAT-11827</b>	<p><b>Updated Repay plugin to add Customer Key to LAT token string</b></p> <p>Updated Repay plugin's code to parse the Customer Key from the token string instead of getting it from auxiliary info. This change will impact new tokens only , existing tokens will work as they did before.</p>
------------------	--

### Component: Work Flow

<b>LAT-11871</b>	<p><b>Add Email Attachment option in Send Correspondence Workflow Action</b></p> <p>Add a new option in the Send Correspondence workflow action using which a user can do the following:</p> <ol style="list-style-type: none"> <li>1. Select a document type. If a document of this type is attached to the account, it will be attached to the email sent out for the account</li> <li>2. Select if a standard letter should be attached. If this option is checked, PDF of a standard letter template for the selected letter type will be attached to the email sent out for the account</li> </ol>
------------------	---
