Abstract

This document describes how to create a Contact tab in the CIC client based on customer data stored in a SQL database or similar repository. It includes data definitions for the Contacts table, SpeedDialList table, and SpeedDial table. It also provides Contact Schema installation scripts for SQL Server and Oracle.

For the latest version of this document, see the PureConnect Documentation Library at: http://help.genesys.com/cic.

Introduction to Custom ODBC Contact Directories

This document describes how to create a Contact tab in the CIC client based on customer data stored in a SQL database or similar repository.

CIC clients

Customer Interaction Center (CIC) supports two interaction management client applications. This documentation uses the term CIC client to refer to either Interaction Connect or Interaction Desktop.

DataManager

DataManager is the CIC subsystem that services contact and speed dial requests from the CIC client. Besides the SQL Server contact database that CIC ships with, DataManager can use contact data from multiple sources, including Outlook contacts, Exchange address books, and any ODBC-compliant data source that contains a contact schema equivalent to the base CIC contact schema (often accomplished by views).

You must configure each contact data source for DataManager in Interaction Administrator, both as a generic CIC data source, and as a DataManager data source. In addition, each ODBC-based data source must also be configured in the ODBC setup panel.

Contact Data

The DataManager contact system architecture has limited extensibility. Arrange your contact data table to look almost exactly like the CIC Contacts table. Specifically, give the columns the same names, and compatible types and lengths.

You could set up a view to achieve compatibility. However, a view is not always possible, depending on the schema and data formatting differences. In cases where a view is not possible, you can create another table that you periodically update.

Data Types and Lengths

The data types in your table/view do not have to match the data types in the CIC Contacts table exactly; however, they must be similar types. For example, the data type of the BusinessCity field in the Contacts table is nvarchar. Your BusinessCity field could be varchar, char, or nchar (or any other string type supported by your data provider).

Similarly, the data lengths don't have to match exactly. For example, the declared data length of the BusinessCity field in the Contacts table is 30 characters (that is, nvarchar(30)). Your BusinessCity field could safely have a declared length greater than or equal to 30. It might also be able to have a declared length less than 30, but you run the risk of data truncation errors, since the CIC GUIs will not know that shorter limits are in effect.

Configuration

Configure a CIC Data Source for your data provider and source. See IC Data Source Configuration in Interaction Administrator help in the PureConnect Documentation Library.

You also need to configure a Data Manager Contact List Source. Configure it exactly like the IC Public Contacts source (or CIC Private Contacts if you are adding a private directory) except:

- Configure it to use your CIC Data Source.
- Set TABLE=yourTableOrViewName entry in the Additional Information field (unless your table/view name is also Contacts, and you are relying on the qualifier to distinguish your table/view from the CIC table).

Speed Dials

Since speed dial entries can come from multiple data sources, there is little need to have your own SpeedDial and/or SpeedDialList tables. In other words, use CIC tables in most cases. In the rare case where you want to take over the speed dial tables, the data source to use for them can be configured in the main DataManager Configuration page (only one speed dial source is permitted).
# Data Definitions

The following is a description of the CIC tables used to store contact data.

## Contacts table

<table>
<thead>
<tr>
<th>Column Name</th>
<th>Type</th>
<th>Length</th>
<th>NULLABLE</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ID</td>
<td>nvarchar</td>
<td>25</td>
<td>NOT NULL</td>
<td>This is the unique ID for the row. DataManager uses an algorithm that incorporates a timestamp, a server instance id (usually zero), and an auto-incremented value to generate the ID:</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td>`{CString DATAMANAGER_DLL DMGetUniqueID(int instanceId)</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td></td>
<td>{static long s_nCounter;</td>
</tr>

<tr>
<td></td>
<td></td>
<td></td>
<td>&quot;P&quot; = Pager</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>&quot;A&quot; = Assistant Phone</td>
<td></td>
</tr>
<tr>
<td>Notes</td>
<td>nvarchar</td>
<td>2000</td>
<td>Free-form, multi-lined, comment field.</td>
<td></td>
</tr>
<tr>
<td>Password</td>
<td>nvarchar</td>
<td>12</td>
<td>The Web Services password; no longer used in IC 2.3+ with Tracker licensed.</td>
<td></td>
</tr>
</tbody>
</table>

¹ All phone numbers should be in the Standardized Format (e.g. +13178723000) if Reverse White Page (RWP) lookups will be performed against this source.

**SpeedDialList table**
<table>
<thead>
<tr>
<th>Column Name</th>
<th>Type</th>
<th>Length</th>
<th>NULLABLE</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ID</td>
<td>nvarchar</td>
<td>25</td>
<td>NOT NULL</td>
<td>Unique ID for the row (refer to the ID column of the Contacts table for format information).</td>
</tr>
<tr>
<td>Owner</td>
<td>nvarchar</td>
<td>25</td>
<td>NULL</td>
<td>Creator/owner of the row; must be a valid CIC user ID (e.g. &quot;TomH&quot;).</td>
</tr>
<tr>
<td>Access</td>
<td>int</td>
<td>NULL</td>
<td>NULL</td>
<td>(AccessFlags for Oracle) - The access flags bit mask value (refer to the Access column of the Contacts table for legal values).</td>
</tr>
<tr>
<td>ListName</td>
<td>nvarchar</td>
<td>80</td>
<td>NULL</td>
<td>Name of the speed dial list.</td>
</tr>
</tbody>
</table>

**SpeedDial table**

<table>
<thead>
<tr>
<th>Column Name</th>
<th>Type</th>
<th>Length</th>
<th>NULLABLE</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ID</td>
<td>nvarchar</td>
<td>25</td>
<td>NOT NULL</td>
<td>Unique ID for the row (refer to the ID column of the Contacts table for format information).</td>
</tr>
<tr>
<td>ListID</td>
<td>nvarchar</td>
<td>25</td>
<td>NOT NULL</td>
<td>ID field of the SpeedDialList entry (refer to the ID column of the Contacts table for format information).</td>
</tr>
<tr>
<td>ContactSource</td>
<td>nvarchar</td>
<td>64</td>
<td>NOT NULL</td>
<td>DataManager Contact List Source name to be used when looking up the contact.</td>
</tr>
<tr>
<td>ContactID</td>
<td>nvarchar</td>
<td>255</td>
<td>NOT NULL</td>
<td>ID to use when looking up the contact; Since speed dial contacts can come from various data sources (e.g. MAPI, LDAP, etc.), there is no fixed format for this field - it is specific to the source.</td>
</tr>
<tr>
<td>SpeedDialNumber</td>
<td>nvarchar</td>
<td>2</td>
<td>NULL</td>
<td>A one or two-letter code indicating which number to use when dialing the contact: &quot;B&quot; = Business Phone, &quot;B2&quot; = Business Phone 2, &quot;H&quot; = Home Phone, &quot;H2&quot; = Home Phone 2, &quot;M&quot; = Mobile Phone, &quot;F&quot; = Fax, &quot;P&quot; = Pager, &quot;A&quot; = Assistant Phone</td>
</tr>
<tr>
<td>AdditionalData</td>
<td>nvarchar</td>
<td>128</td>
<td>NULL</td>
<td>Currently not used.</td>
</tr>
</tbody>
</table>

## Change Log

The following table lists the changes to this document since Customer Interaction Center version 4.0 product availability.

<table>
<thead>
<tr>
<th>Date</th>
<th>Change</th>
</tr>
</thead>
<tbody>
<tr>
<td>01-August-2014</td>
<td>Updated documentation to reflect changes required in the transition from version 4.0 SU# to CIC 2015 R1, such as updates to product version numbers, system requirements, installation procedures, references to Product Information site URLs, and copyright and trademark information.</td>
</tr>
<tr>
<td>01-July-2015</td>
<td>Updated cover page with new logo.</td>
</tr>
<tr>
<td>01-April-2017</td>
<td>Updated documentation to reflect the removal of Interaction Client Web Edition.</td>
</tr>
<tr>
<td>23-March-2018</td>
<td>Rebranded to Genesys.</td>
</tr>
<tr>
<td>23-May-2019</td>
<td>Reorganized the content only, which included combining some topics and deleting others. For more details, see <a href="#">CICDOC-192</a>.</td>
</tr>
</tbody>
</table>
