Interaction Reporter

Introduction

Interaction Reporter, an add-on module for IC Business Manager, allows you to generate pre-defined reports. Depending on the report, Interaction Reporter uses the ActiveReports 6 or Crystal Reports reporting runtime. Using a report Filter, simply configure the report parameters and run the report. Report Filters can be saved to be used again, and a filter can also be exported to a file.

Depending on the report, when viewing a report, you can use the Report Viewer Toolbar to annotate a report, print a report, and export a report for distribution. You can also customize your Interaction Reporter Workspace to display multiple Views.

Reports are organized in the Navigation Pane by category. The report categories are:

- Analyzer Reports
- Dialer Reports
- Interaction Optimizer
- Line Reports
- Queue Reports
- Interaction Quality Manager Reports
- Tracker Reports
- User Reports
- Wrap-Up Codes
- Account Code - Supervisor
- Agent Queue Activation
- Call - Supervisor
- Director
- DNIS
- General Administrative
- Interaction Feedback
- IVR
- Queue / Wrap-up
- Legacy Historical Reports

Note By default, **Legacy Historical Reports** category is not visible. To display this category, from **Interaction Administrator**, in the **Report Management** node, select **Report Configuration**. On the **Report Configuration** page, in the **Categories** list, select **Legacy Historical Reports**, and click the icon **Edit the selected Category**. In the Edit Category dialog, select **Visible**.

- Legacy Reports

Note The **Legacy Reports** category contains reports that are generated using ActiveReports. The reports in the Legacy Reports category have been replaced in Interaction Reporter in IC Business Manager with new versions built on Crystal Reports. The new Crystal reports can be found in Interaction Reporter under their respective categories. For example, the new Crystal User reports can be found under the User Reports category, and the new Crystal Queue reports can be found under the Queue Reports category.

To learn more about Interaction Reporter, see [About the Interface](#).

Report Management

Report Management, in Interaction Administrator, allows you to configure reports that were created using ActiveReports and Crystal Reports. The reports configured in Report Management are run in Interaction Reporter in IC Business Manager. The Report Management Report Configuration page allows you to edit and manage metadata related to a report.

For more information on Report Management, see the [Interaction Administrator Help](#) and the [PureConnect Reporting Technical Reference](#).

PureConnect Data Dictionary

The [PureConnect Data Dictionary Technical Reference](#) provides a concise and detailed description of the database tables IC uses to store and generate reports on historical data. This includes information stored for interactions, queue statistics, agent and user activity, line and line groups, administrative changes, and other Interaction Administrator configuration information. This document assists you in understanding the structure and contents of IC tables.

For more information, see the [PureConnect Data Dictionary Technical Reference](#) located in the PureConnect Documentation Library. From Technical Reference documents, in the **Product Filter**, select **Customer Interaction Center**, and in the **Feature area Filter**, select **Data**. To open the data dictionary, select **PureConnect**

Technical Reference documents

Technical Reference Documents contains (or contain) a broad range of installation and reference documents covering various PureConnect features and components. If you cannot find a document elsewhere in the PureConnect Documentation Library, look for it here. Using the following table you can sort each column by clicking the heading. You can also use the list boxes to select filters and see only those documents matching the filters from each column.

Click the names below to display summary information that describes each document.

Title	Product	Feature area	Format
> Account Codes Technical Reference	Customer Interaction Center	Data	PDF
> Active Directory Accounts with SQL in CIC Technical Reference	Customer Interaction Center	Data	PDF
> CIC Database Configuration and Maintenance for Oracle Technical Reference	Customer Interaction Center	Data	PDF
> CIC Database Configuration and Maintenance for SQL Server Technical Reference	Customer Interaction Center	Data	PDF
> CSV List Import Technical Reference	Customer Interaction Center	Data	PDF
> Data Backup Technical Reference	Customer Interaction Center	Data	PDF
> Interaction Attributes Technical Reference	Customer Interaction Center	Data	PDF
> PureConnect Data Dictionary Technical Reference	Customer Interaction Center	Data	PDF

About Interaction Reporter

Interaction Reporter, an add-on module for IC Business Manager, allows you to generate pre-defined reports. Depending on the report, Interaction Reporter uses the ActiveReports 6 or Crystal Reports reporting runtime. Using a report Filter, simply configure the report parameters and run the report. Report Filters can be saved to be used again, and a filter can also be exported to a file.

Depending on the report, when viewing a report, you can use the Report Viewer Toolbar to annotate a report, print a report, and export a report for distribution. You can also customize your Interaction Reporter Workspace to display multiple Views.

Reports are organized in the Navigation Pane by category. The report categories are:

- Analyzer Reports
- Dialer Reports
- Interaction Optimizer
- Line Reports
- Queue Reports
- Interaction Quality Manager Reports
- Tracker Reports
- User Reports
- Wrap-Up Codes
- Account Code - Supervisor
- Agent Queue Activation
- Call - Supervisor
- Director
- DNIS
- General Administrative
- Interaction Feedback
- IVR
- Queue / Wrap-up
- Legacy Historical Reports

Note By default, **Legacy Historical Reports** category is not visible. To display this category, from **Interaction Administrator**, in the **Report Management** node, select **Report Configuration**. On the **Report Configuration** page, in the **Categories** list, select **Legacy Historical Reports**, and click the icon **Edit the selected Category**. In the Edit Category dialog, select **Visible**.

- Legacy Reports

Note The **Legacy Reports** category contains reports that are generated using ActiveReports. The reports in the Legacy Reports category have been replaced in Interaction Reporter in IC Business

Manager with new versions built on Crystal Reports. The new Crystal reports can be found in Interaction Reporter under their respective categories. For example, the new Crystal User reports can be found under the User Reports category, and the new Crystal Queue reports can be found under the Queue Reports category.

To learn more about Interaction Reporter, see [About the Interface](#).

Report Management

Report Management, in Interaction Administrator, allows you to configure reports that were created using ActiveReports and Crystal Reports. The reports configured in Report Management are run in Interaction Reporter in IC Business Manager. The Report Management Report Configuration page allows you to edit and manage metadata related to a report.

For more information on Report Management, see the Interaction Administrator Help and the *PureConnect Reporting Technical Reference*. The latest versions of documents can be accessed from the PureConnect Documentation Library on the Genesys Web site at: help.genesys.com.

PureConnect Data Dictionary

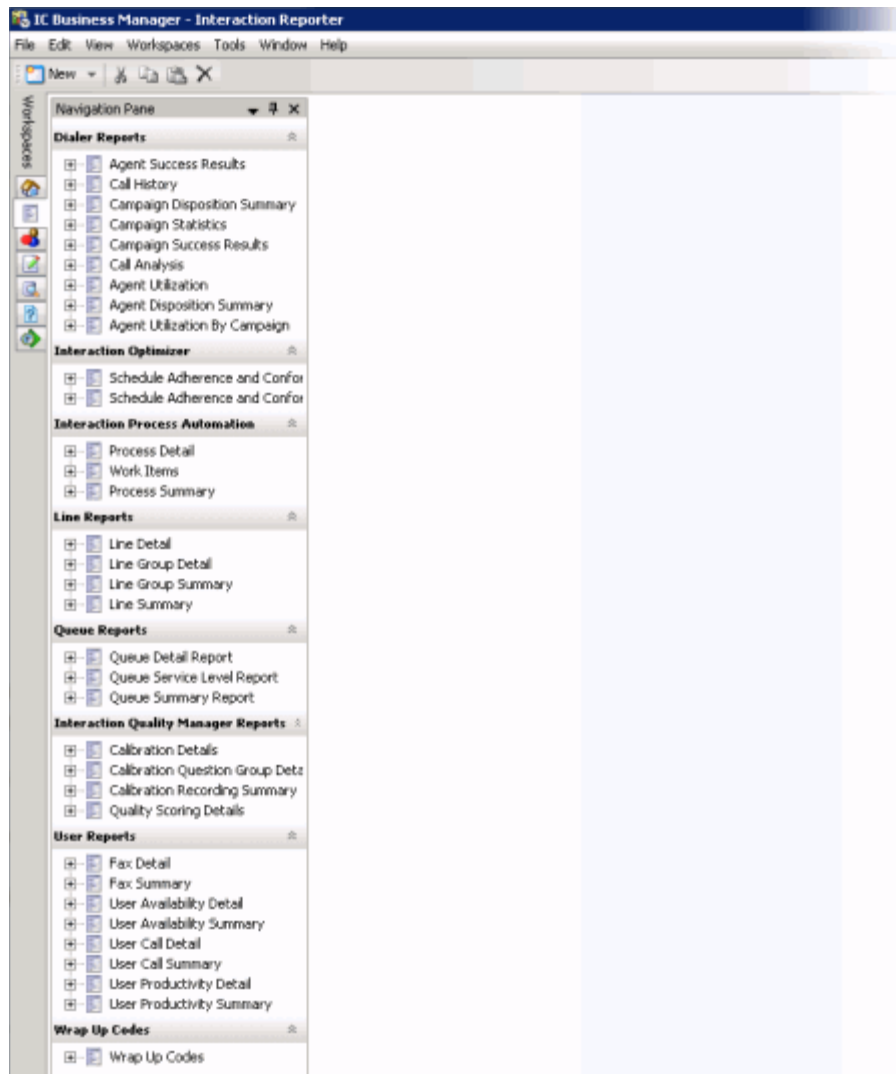

The *PureConnect Data Dictionary Technical Reference* provides a concise and detailed description of the database tables IC uses to store and generate reports on historical data. This includes information stored for interactions, queue statistics, agent and user activity, line and line groups, administrative changes, and other Interaction Administrator configuration information. This document assists you in understanding the structure and contents of IC tables.

For more information, see the *PureConnect Data Dictionary Technical Reference* located in the PureConnect Documentation Library on the Genesys Web site at: help.genesys.com.

About the User Interface

Interaction Reporter uses the IC Business Manager user interface, which makes it easier to navigate your options when generating and viewing reports. The interface includes menus, toolbars, navigation panes, and a workspace. For basic information on using the IC Business Manger interface, see **Getting Started** on the Help menu.

To learn more about the Interaction Reporter user interface features, pause the mouse pointer over the menu bar, toolbar, navigation pane, or the Workspace on the graphic below, and click to display more information.

[Customizing Interaction Reporter Workspace Views](#)

Run a Report

Run a Report

Available reports are listed, by category, in the Interaction Reporter Navigation Pane. You can run a report by configuring its parameters in a Filter View in the Workspace, or you can run a report from a *Filter* you have created.

To learn more, see [Running a Report](#).

Running a Report

Interaction Reporter reports are accessed in the Navigation pane. Reports are listed as the following categories:

- Analyzer Reports
- Dialer Reports
- Interaction Optimizer
- Interaction Process Automation
- Line Reports
- Queue Reports
- Interaction Quality Manager Reports
- Tracker Reports
- User Reports
- Wrap-up Codes
- Account Code - Supervisor
- Agent Queue Activation
- Call - Supervisor
- Director
- DNIS
- General Administrative
- Interaction Feedback
- IVR
- Queue / Wrap-up
- Legacy Historical Reports
- Legacy Reports

You can run a report by configuring a report filter, or you can run a report from a saved filter.

Run a report

To run a report, configure its parameters in the Filter View.

1. In the Navigation Pane, under a report category, double-click a report. The report Filter View is displayed in the Workspace with the required report parameters.
2. Under **Required Parameters**, configure the required report parameters.

Note Crystal Reports uses the operating system (OS) localization setting instead of the ICBM language setting to interpret decimal values in a parameter. If the regional format in Windows indicates Spanish (Spain), the report uses a comma (,) as a decimal. If the regional format in Windows indicates English, the report uses a period (.) as a decimal. When configuring your

report parameters, enter a value that is formatted according to the OS locale of your client machine. For example, if your locale is Spanish and you need to provide a decimal, type "16,3" instead of "16.3".

3. Add **Additional Parameters** to the filter. To add an additional parameter, under **Additional Parameters** select a parameter from the list.
4. If the report filter contains **Formatting Parameters** or **Group By and Summary Parameters**, configure the optional parameters for the filter.

Note For detailed information on Report Parameters, see the online Help for each report filter. To access this Help, in the Filter View click on a parameter field and press **F1**.

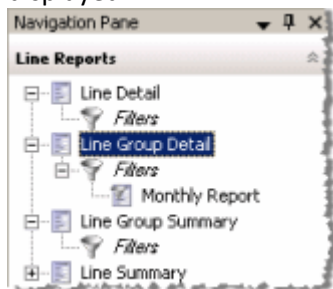

5. When you are configuring report parameters, you can view the number of records that will be used to generate your report by clicking **Show Count** on the toolbar.
6. When the parameters for your report have been configured, click **Run Report** on the toolbar. The generated report is displayed in a report viewer in the Workspace.

For more information about the report viewer, see [Viewing a Report](#).

Running a report from a saved filter

Report filters are saved under each report in the Navigation Pane. For information on saving a report filter, see [Using Report Filters](#). Here are the steps to run a report from a filter.

1. In the Navigation Pane, expand the report, and then expand Filters. The saved Filters are displayed.

2. Under **Filters**, double-click a saved filter. The generated report is displayed in the report viewer in the Workspace.

Related Topics

[Using Report Filters](#)

[Viewing a Report](#)

Using Report Filters

Report filters are displayed in the Workspace and used to configure report parameters and run reports. Report filters are accessed in the Navigation Pane under each report. After running a report, you can save a Report Filter to be used again, and a filter can also be exported to a file. The filter of the most recently run report is saved in the *Last Used* filter in the Navigation Pane under each report name.

Filter View

In the Filter view you can configure required report parameters, add additional report parameters, import or export a report filter file, load a filter or save a filter to the IC Server, show the count for the number of records in the report, and run the report.

Creating a report filter

Create a report filter by configuring report parameters.

1. From the Navigation Pane, double-click a report name. The report filter is displayed in the Filter View in the Workspace.
2. Configure the required report parameters that are displayed in the Workspace.
3. Add additional report parameters to the filter.

To add a parameter, Click **Add Parameter** . A new parameter is added to the filter.

Note To add multiple instances of the same parameter with the **And** property, see the Help topic **Adding the AND property to a parameter**.

Note For information on report parameters, see the Help for each report filter. In the Filter View, click in a parameter field, and press **F1**. When the Help topic is displayed, scroll down to the table for a description of Report Parameters.

Importing or Exporting a report filter

You can import and export a report filter file.

Import report filter

To import a report filter from a file:

1. In the **Navigation Pane**, open the report filter for the file you are importing. For example, to import a Line Detail report filter, under **Line Reports**, double-click **Line Detail**. The default filter is displayed in the Workspace.

2. Click **Import** . The Import dialog is displayed.
3. Select the **Name** of the filter file to be imported. The name is displayed in the **File name** box.
4. Click **Open**. The report filter is displayed in the Workspace.

Export report filter

To export a report filter to a file:

1. Click **Export** . The Export dialog is displayed.
2. Type a descriptive name for the filter file in the **File name** box.
3. Click **Save**. The report is saved and the dialog box is closed.

Loading or Saving a report filter

You can save a report filter to the IC Server and load it from there.

Load report filter

To load a saved report filter from the IC Server:

1. From the **Reports** toolbar, click **Load Filter** . The Load Filter dialog is displayed.
2. Select a filter name, and click **OK**. The report filter is displayed in the Workspace.

Save report filter

To save a report filter to the IC Server:

1. From the **Reports** toolbar, click **Save Filter** . The Save Filter dialog is displayed.
2. Type a descriptive name for the report filter in the lower box, and click **OK**. The filter name is displayed under the report name in the Navigation Pane. You can run the report from the Navigation Pane by double-clicking the saved filter.

Resetting filter parameters

You can reset a filter to its default view.

To reset filter parameters, from the **Reports** toolbar, click **Reset** . The filter default parameters are displayed.

[Running a Report](#)

[View a Report](#)

[View a Report](#)

After running a report from the **Navigation Pane**, the generated report is displayed in the Report View in the Workspace. When viewing a report, you can press F1 for Help.

To learn more, see [Viewing a Report](#).

Viewing a Report

After running a report, the generated report is displayed in a report viewer in the Workspace. Interaction Reporter includes a Report Viewer toolbar with features to assist you while viewing a report.

ActiveReports viewer toolbar

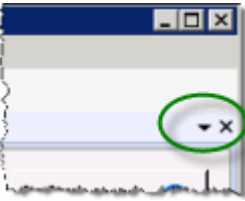

The ActiveReports report viewer displays the following toolbar. To learn more about the Interaction Reporter Toolbar features, on the following graphic pause the mouse pointer over an icon, and click to display more information.

To switch between displayed reports, click the **Active Files** button . A list is displayed with the names of all the reports opened in the Workspace. Click the name of the report you want to set the focus to.

Toolbar button descriptions

Here are the descriptions for the toolbar buttons.

Toolbar Button	Description
	<p>The Report tab displays the name of the Report in the Workspace. When the report parameters are displayed in the Workspace, if you place the mouse over the Report tab the name of the Report is displayed. After you run a report, when you place the mouse over the Report tab, the filter information used to generate the report is displayed. If multiple reports are displayed in the Workspace, click the Report tab to view the report page.</p> <p>Right-click on a Report tab for more options. A short-cut menu is displayed, including an option Close All But This. When you have several reports open, use this option to close all Reports <i>except</i> the one you have clicked and has focus.</p>
	<p>Click this button to display the Table of Contents. The Table of Contents contains two tabs at the bottom of the pane: Table Of Contents and Thumbnail View.</p>
	<p>To Print the displayed report, click this button.</p>
	<p>Use this button to Copy the data in a report from the current page to the clipboard.</p>

	Use the Find button to search for text in a report. When you click the button, the Find dialog is displayed.
	Click this button to display a Single Page View of the report.
	To display multiple pages of your report in the Workspace, click the Multiple Page View button. A drop-down menu is displayed. Select the layout to display report pages in the Workspace. You can select up to six pages to display at a time.
	The Continuous Scroll button allows you to scroll through your report one page at a time.
	Use these buttons to Zoom Out to see more of a report page or Zoom In to get a close-up view of the report page displayed in the Workspace. You can also enter a particular Zoom Value by typing a percentage or choosing a setting from the drop-down list.
	Use the Previous Page and Next Page buttons to view pages of your report in consecutive order. You can also enter a specific page number in the Page Index field.
	Use these buttons to move Backward and Forward through the history of viewed report pages.
	Use the Annotations button to add text and graphics to a report displayed in the Workspace. For details, see <i>Annotating a Report</i> .
	To reload the report, click Refresh .
	To switch between displayed reports, click the Active Files button  . A list is displayed with the names of all the reports opened in the Workspace. Click the name of the report you want to set the focus to. To close the report that has focus, click the Close button  .

Crystal Reports viewer Toolbar

The Crystal Reports report viewer displays the following toolbar.

Report View Toolbar

When viewing a Crystal Report in the Workspace, several options are available from the Report View Toolbar. To learn more about these options, on the graphic below pause the mouse pointer over a button to display its function, and click to display more information.

Customizing the Workspace View

You can customize the Workspace Views for the Filter View and the Report View. This might be helpful to compare filter parameters for reports or to compare the results of multiple reports. For more information, see [Customizing Interaction Reporter Workspace Views](#).

Related Topics

[Customizing Interaction Reporter Workspace Views](#)

[Viewing a Sample Report](#)

Customizing Interaction Reporter Workspace Views

You can customize the Workspace for the Report Views and Filter Views. This might be helpful to compare filter parameters for reports or to compare the results of multiple reports. The Workspace can be split horizontally and vertically, and you can move a View to another Tab Group.

Note For detailed information on working with views, see **Create horizontal, vertical, or tabbed group views** in the IC Business Manager Getting Started Help.

Splitting your Workspace View

To split your Workspace into a new Tab Group, right-click on the Tab of a Report View or Filter View and select **New Horizontal Tab Group** or **New Vertical Tab Group**.

When you select **New Horizontal Tab Group**, the View is split horizontally and the Report or Filter is displayed in the new horizontal view.

When you select **New Vertical Tab Group**, the View is split vertically and the Report or Filter is displayed in the new vertical view.

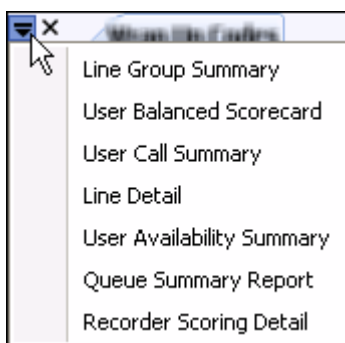

Moving a View to a another Tab Group

You can move a Report View or Filter View to a different Tab Group. To move a View to another Tab Group, right-click on the Tab and in the shortcut menu click **Move to Next Tab Group** or **Move to Previous Tab Group**.

Displaying a list of Report Views and Filter Views in a Tab Group

When a Tab Group contains more Report Views or Filter Views than can be displayed at one time, use **Active Files** drop-down arrow to display a list of all the Views in a Tab Group.

[Viewing a Sample Report](#)

Viewing a Sample Report

Sample reports are examples of actual reports that have been generated by Interaction Reporter. The sample reports illustrate the report designs and the content of each report type.

You can view examples of Interaction Reporter reports in the online Help.

To view a sample report:

1. From the Table of Contents, in the **Interaction Reporter reports** book, expand a report category, for example, **Line Reports**
2. Click on a report name, such as **Line Detail Report**
3. Information is displayed about the report. To view an example of the report, under the heading, **Sample Report**, click on the report image.

The screenshot shows a 'Sample Report' header with the Genesys logo. Below the header is a table with the following columns: Group, Description, Available Per Line, Max Used Capacity, Utilization (Average, %), Total Calls, Calls Per Line, Avg Call Duration, Min Call Duration, % of Total Minutes, and % of Total Minutes. The table contains several rows of data, including a 'Group' row and multiple rows for 'Description'.

A sample of the report is displayed.

Note For detailed information on individual reports, see the **Interaction Reporter reports** book in the Help Table of Contents. To view information for a specific report, on the **Contents** tab expand this book, click on a report category, and then click on the name of a report. A Help topic with all the details of the report is displayed.

Export Report Data

Export Report Data

Report data can be exported when viewing a report in the Workspace.

Crystal reports can be exported, in a standard readable format or as unformatted data, using the Export Button on the report viewer, or clicking the Export button on the main toolbar.

ActiveReports can be exported, in a standard readable format or as unformatted data, by clicking the Export button on the main toolbar.

To learn more about exporting a report, see [Exporting Report Data](#).

Exporting Report Data

You can export report data from a report that is displayed in the Workspace. Data can be exported in a formatted readable format or in an unformatted data format.

Crystal reports data

Crystal reports can be exported, in a standard readable format or as unformatted data, using the **Export** button on the main toolbar, or using the Export Button in the report viewer.

Crystal report Export button on main toolbar

Crystal reports **Formatted** data can be exported to the following formats:

- Excel 97-2003
- HTML
- PDF
- Text
- Tab-Separated Text
- Crystal RPT

Crystal reports **Unformatted** data can be exported to the following format:

- CSV format

The following **Additional Crystal Formats** can be used to export Crystal reports data:

- Crystal Reports (*.rpt)
- PDF (*.pdf)
- Character Separated Values (CSV) (*.csv)
- Microsoft Excel (97-2003) (*.xls)
- Microsoft Excel (97-2003) Data-Only (*.xls)
- Microsoft Excel Workbook Data-Only (*.xlsx)
- Microsoft Word (97-2003) (*.doc)
- Microsoft word (97-2003) - Editable (*.rtf)
- Rich Text Format (RTF) (*.rtf)
- XML (*.xml)

Crystal report Export button in report viewer

The following Crystal formats can be used to export Crystal reports data from the report viewer.

- Crystal Reports (*.rpt)
- PDF (*.pdf)
- Character Separated Values (CSV) (*.csv)
- Microsoft Excel (97-2003) (*.xls)
- Microsoft Excel (97-2003) Data-Only (*.xls)
- Microsoft Excel Workbook Data-Only (*.xlsx)
- Microsoft Word (97-2003) (*.doc)
- Microsoft word (97-2003) - Editable (*.rtf)
- Rich Text Format (RTF) (*.rtf)
- XML (*.xml)

ActiveReports data

Using the **Export** button on the main toolbar, ActiveReports formatted data can be exported to the following formats:

- Excel
- HTML
- PDF
- Text

ActiveReports unformatted data can be exported to the following format:

- CSV format

For more information, see [Exporting Formatted Data](#) and [Exporting Unformatted Data](#).

Exporting Formatted Data

You can export formatted data from a report that is displayed in the Workspace.

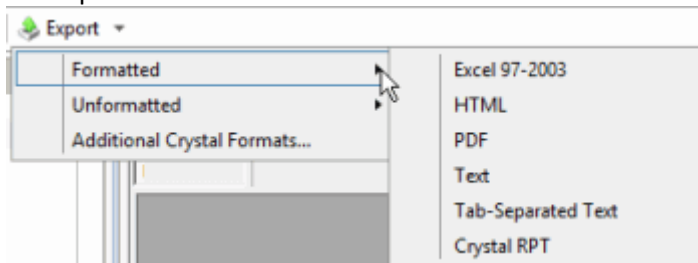

Exporting Crystal reports data

You can export a Crystal report using the main toolbar or the Report Viewer toolbar.

Main toolbar

To export your Crystal report to one of the supported formatted data formats:

1. From the Interaction Reporter main toolbar, click **Export**
2. On the Export menu point to **Formatted**, and then select the file format that you want to export the report to.

3. On the Save As dialog, name and save the file. A progress indicator displays the status of the exported file.

Report viewer toolbar

To export your Crystal report to one of the supported formatted data formats:

1. When your report is displayed in the workspace, click the **Export Report** button on the report viewer toolbar.

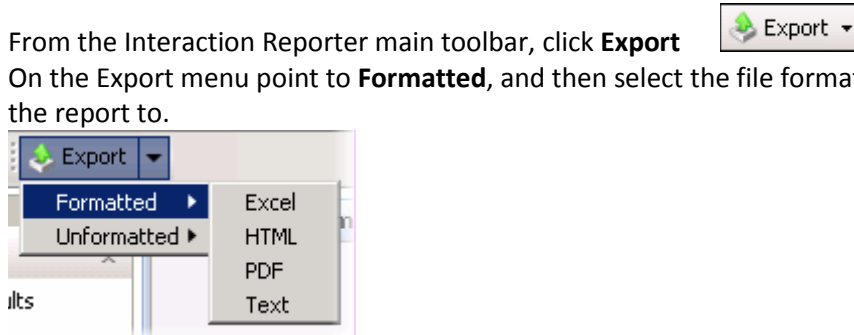

2. On the Export Report dialog, select an export report format from the **Save as type** drop-down list.

Exporting ActiveReports data

Export ActiveReports using the main toolbar. To export your ActiveReport to one of the supported formatted data formats:

1. From the Interaction Reporter main toolbar, click **Export**
2. On the Export menu point to **Formatted**, and then select the file format that you want to export the report to.

3. On the Save As dialog, name and save the file. A progress indicator displays the status of the exported file.

Related Topics

[Exporting Unformatted Data](#)

Exporting Unformatted Data

You can export report data in an unformatted data format from a report that is displayed in the Workspace.

Unformatted report data can be exported to:

- CSV format

To export your report data to a CSV data format:

1. From the Interaction Reporter toolbar, click **Export**
2. On the Export menu point to **Unformatted** and then click CSV.

3. On the Save As dialog, name and save the file. A progress indicator displays the status of the exported file.

Analyzer Reports

Analyzer Reports

The Analyzer Reports provide information on contact center management for agent and customer interactions.

Analyzer Scoring Detail Report

The Analyzer Scoring Detail Report provides Analyzer scoring data on agent and customer cumulative scores for contact center management. This report displays positive and negative scores for keywords from both the agent and customer conversation legs. The report displays data from all workgroups by interval. It also breaks down scores by workgroup, with the name of the recorded agent and the scoring details of the recorded interaction.

The information in the Scoring Detail report is displayed by interval and workgroup and includes:

- The sum of positive customer scores for the interaction
- The sum of negative customer scores for the interaction
- The sum of positive agent scores for the interaction
- The sum of negative customer scores for the interaction
- The total sum of customer scores for the interaction
- The total sum of agent scores for the interaction
- The total sum of customer and agent scores for the interaction

Parameters

The following parameters can be specified for the Scoring Detail:

- Recording Date/Time
- Agent
- Workgroup
- Site ID
- Top N Results
- Bottom N Results
- Group Order
- Interval

Keyword Hit Report

The Keyword Hit report displays detail and summary views of keyword hits that were identified by Analyzer keyword categories, over a specified period of time. A bar chart reporting on the percentage of recordings containing hits from Keyword categories and a chart showing the count and percent of recordings that contain keyword hits by category are displayed. The report has hyperlinks to drill down to a Keyword Detail view and an Interaction Detail View for additional information on keyword hits within each call.

The information in the Keyword Hit report is displayed by Workgroup, Keyword Set Category, and Keyword Set name and includes:

- Keyword
- Date
- Number of recordings
- Number of hits

Parameters

The following parameters can be specified for the Keyword Hit report:

- **Recording Data/Time** Required parameter

- **Display Chart** Boolean parameter set to True by default, which controls the visibility of the chart on the first page of the report
- **Keyword Set Category**
- **Keyword Set Name**
- **Chart Top N Results** Numeric parameter set to Top 10 categories, by default, that controls how many categories display on the chart
- **Workgroup Queue** Parameter set by default to use the Secured Workgroup search, which can be configured by an administrator to use a textbox search
- **Interval** Numeric parameter set by default to group data Daily=1, other values are: Day of week=0; Week=2; Month=3

Dialer Reports

Dialer Reports

The Dialer Reports display detailed information on Agent success on Dialer calls and Dialing algorithm statistics. For more information on specific Dialer Reports, click on a report name under **Dialer Reports**.

Agent Success Results Report

The Agent Success Results report displays detailed information about an Agent's success on Dialer calls that were routed to the agent. The details are displayed by the Site ID and Campaign name, by agent, for the specified date and period of time for a connected call.

The information in this report is displayed by Agent and includes:

- Difference From Average (DFA) for the number of Dialer Calls
- Percentage of Right party Contacts (RPC) related to total dialed calls
- Percentage of successes related to number of Right Party Contacts
- Total Results per Right Party Contacts
- Total results per successes

Parameters

The following parameters can be specified for the Agent Success Results report:

- Date Time
- Campaign
- Site ID
- Wrap-up Category
- Display Legends

Sample report

Click on the image below to view a sample of this report.

The screenshot shows a 'Sample Report' from GENESYS. It contains a table with the following columns: Group, Site ID, Campaign, Successes, Failures, % Success, and % Total Results. The data is organized into rows for different groups and site IDs, showing performance metrics for each.

Group	Site ID	Campaign	Successes	Failures	% Success	% Total Results
Group 1	Site ID 1	Campaign 1	100	100	50%	50%
Group 2	Site ID 2	Campaign 2	200	200	50%	50%
Group 3	Site ID 3	Campaign 3	300	300	50%	50%
Group 4	Site ID 4	Campaign 4	400	400	50%	50%
Group 5	Site ID 5	Campaign 5	500	500	50%	50%

Report Element Descriptions

Report Element	Database Column or Computation
Agent	IceLib GetDisplayName function based on corresponding icuserid, firstname, lastname from the Individual table.
Dialer calls #	DistinctCount(CallHistory.CallIDKey)

Call History Report

The Call History report displays detailed information for all dialing results from call history. The report includes many parameters for specific reporting results.

The information in this report includes:

- Campaign name
- Phone number
- Call Date
- Remote Answer time
- Message Play time
- Connected Agent time
- Agent name
- Call disconnected time
- Call duration
- Abandon OR Contacted
- Category
- Wrap-up code

Parameters

The following parameters can be specified for the Call History report:

- Date Time
- Abandoned
- Agent ID
- Campaign
- Contacted
- Connected to Agent
- Duration
- Phone Number
- Site ID
- Wrap-up Category
- Show Legend

Sample report

Click on the image below to view a sample of this report.

The screenshot shows a 'Sample Report' from Genesys. It includes a table with columns for Campaign, Agent, Call Date, Remote Answer, Msg Play, Conn Agent, Agent, and Call disc. The table contains data for various campaigns and agents, with columns for Call Placed, Call Answered, Call Connected, Call Disconnected, and Call Duration. The data is presented in a grid format with alternating row colors.

Report Element Descriptions

Report Element	Database Column or Computation
Campaign	Campaignname
Phone No	phonenummer
Call Date	CallPlacedTimeUTC
Remote Answer	callansweredtimeUTC
Msg Play	messageplaytimeUTC
Conn Agent	callconnectedtimeUTC
Agent	Agent
Call disc	calldisconnectedtimeUTC

Duration	length
Abd/Con	IsAbandon OR IsContact
Category*	Wrapupcategory
Code*	Wrapupcode

* Admin Access rights are required for the Wrapup category and Wrapup code to be displayed in the report. If you do not have the appropriate rights, the ID (GUID) of the category or code is displayed in the report column.

Campaign Disposition Summary Report

The Campaign Disposition Summary Report is an analysis of call dispositions, by Agent-assigned dispositions and Dialer-assigned dispositions, with wrap-up category and wrap-up code breakdown.

The detailed statistics for disposition by Category and Wrap-up Code are:

Category

- Category
- Number of calls
- Calls percentage of total
- Call Length Total
- Call Length Average
- Call length percentage of total

Wrap-up Code

- Category

- Wrap-up code
- Number of calls
- Calls percentage of total
- Calls percentage of category
- Call Length total
- Call length average
- Call length percentage of total
- Call length percentage of category

Parameters

The following parameters can be specified for the Campaign Disposition Summary report:

- Date Time
- Campaign
- Side ID
- Wrap-up Category

Sample report

Click on the image below to view a sample of this report.

Agency	Category	Agent	Calls	Call Length	% of Total Calls	% of Total Call Length
Agency A	Category X	Agent 1	100	120	10%	12%
Agency A	Category X	Agent 2	200	150	20%	15%
Agency A	Category X	Agent 3	300	180	30%	18%
Agency A	Category X	Agent 4	400	200	40%	20%
Agency A	Category X	Agent 5	500	220	50%	22%

Campaign Statistics Report

The Campaign Statistics Report displays detailed Dialing algorithm statistics. The statistics are reported to the interval level of detail, including record and agent counts, pace, and Campaign events.

The detailed statistics include:

- Date and Time range
- Count of numbers to dial after filters have been applied
- Count of numbers to redial after a recycle operation
- Total number of Agents for the time interval
- Number of agents idle for the time interval
- Percentage of agents idle for the time interval
- Number of Non-Dialer agents
- Percentage of Non-Dialer agents
- Pace Dialer is placing calls. A negative number means Dialer is placing fewer calls than expected, in order to keep agents busy.
- Base number of calls per agent (CPA)
- Adjusted number of calls per agent
- Number of Dialed calls in time interval
- Penetration rate based on filter size--dialed calls divided by filter size
- Percentage of Contacts dialed
- Percentage of Right Party Contacts
- Percentage of Abandoned Dials
- Percentage of Abandons related to detections--call analysis detected a live party, or not
- Percentage of Abandoned Contacts

Parameters

The following parameters can be specified for the Campaign Statistics report:

- Date Time
- Campaign
- Site ID
- Period Type

- Display Legends

Sample report

Campaign Success Results Report

The Campaign Success Results Report displays a campaign analysis by interval, including: Agent, Dials, Contacts, Successes, Right Party Contacts (RPC), and actual results.

The detailed statistics include:

- Site ID
- Campaign
- Day
- Time
- Agents
- Number of dials
- Number of contacts

- Contacts percentage of dials
- Number of Right Party Contacts (RPC)
- RPC percentage of dials
- RPC percentage of Contacts
- Number of successes
- Successes percentage of dials
- Successes percentage of Right Party Contacts (RPC)
- Number of results
- Results per RPC
- Results per agent
- Number of Abandons
- Abandons percentage of dials
- Abandons percentage of detects
- Abandons percentage of contacts

Parameters

The following parameters can be specified for the Campaign Success Results report:

- Date Time
- Campaign
- Site ID
- Wrap-up Category
- Period Type
- Display Legends

Sample report

Click on the image below to view a sample of this report.

The screenshot shows a 'Sample Report' from Genesys. The report title is 'Sample Report' and it includes the Genesys logo. Below the title, there is a table with columns: Campaign, Site ID, Successes, Results, Abandons, and % Success. The table contains several rows of data, including a summary row for 'All Campaigns' and individual rows for different campaigns and sites. The data is presented in a clear, tabular format with alternating row colors for readability.

Report Element Descriptions

Report Element	Database Column or Computation
Site ID	Siteld
Campaign	Campaignname

Day	Local (Date part of callplacedtimeUTC)
Time	Interval based on Local (Time part of callplacedtimeUTC)
Agents	Distinct Count (CallHistory.AgentId)
#Dials	Distinct Count of records (grouped by SiteId, Campaign, Day, Time)
# Contacts	Sum(CallHistory.IsContact)
Contacts %Dials	#Contacts / #Dials
#RPC	Sum(CallHistory.IsRPC)
RPC %Dials	# RPC / #Dials
RPC %Cnts	# RPC / #Contacts
# Successes	Sum(CallHistory.IsSuccess)
Successes %Dials	#Successes / #Dials
Successes %RPC	#Successes / #RPC
# Results	Sum(CallHistory.SuccessResult)
Results per RPC	#Results / #RPC
Results Per Agt	#Results / Agents
# Abandons	Sum(CallHistory.IsAbandoned)
%Dials Abandons	#Abandons / #Dials
%Dets Abandons	#Abandons / Sum(CallHistory.IsDetect)
%Cnts Abandons	#Abandons / #Contacts

Report Legends

Symbol	Description
--------	-------------

Agents	The individual who conducted the call
#Dials	Number of dialed calls
%Dials	Percentage relative to dials, depending on the column it is the number of contacts or abandons divided by the number of dials
%Cnts	Depending on the column, it is the percentage of right party contacts or abandons related to the number of contacts
%RPC	Total results per right party contacts
%Dets	Percentage of abandons related to detections: call analysis detected a live party or not

Call Analysis Report

The Call Analysis report displays a breakdown of call analysis results in summary, by hour of day, and by detailed result.

The information in this report includes:

- Call Analysis result
- Number of dials
- Hour
- Dials
- Live Voice count
- Live voice percentage
- Answering machine count
- Answering machine percentage

- Fax count
- Fax percentage
- SIT (Special Information Tones) count
- SIT percentage
- Failure count
- Failure percentage
- Unknown count
- Unknown percentage
- Percentage of total dials

Parameters

The following parameters can be specified for the Call Analysis report:

- Date Time
- Campaign
- Site ID
- Wrap-up Category

Agent Disposition Summary Report

The Agent Disposition Summary report displays detailed information about agent-assigned call dispositions, with an analysis of call counts and call lengths by disposition.

The information in this report is displayed by Agent and includes:

- Campaign name
- Dialer site
- Category
- Category code
- Number of calls
- Percentage of total calls
- Percentage of calls in category
- Total call length
- Average call length
- Percentage of total call length
- Percentage of call length in category

Parameters

The following parameters can be specified for the Agent Disposition Summary report:

- Date Time
- Campaign
- Site ID
- Agent
- Wrap-up Category

Agent Utilization by Campaign Report

The Agent Utilization by Campaign report displays time usage information for agents, by campaign, on Dialer-related tasks. The report includes statistics on tasks such as: logged-in time, connected/talk time, and wrap-up time.

The information in this report is displayed by Campaign and Agent, and includes:

- Campaign name
- Agent
- Logged-in time
- Number of calls
- Average Connected/Talk time
- Total Connected/Talk time
- Percentage Connected/Talk time
- Average Wrap-up time
- Total Wrap-up time
- Percentage Wrap-up time
- Average Preview time
- Total Preview time
- Percentage Preview time

Parameters

The following parameters can be specified for the Agent Utilization by Campaign Report:

- Date Time
- Campaign
- Site ID

Best Time to Call Analysis Report

The Best Time to Call analysis Report provides analysis by Contacts, Right Party Contacts (RPC), and success rates of best hours to call for one (1) or many campaigns. The line chart uses the calculations of the tabular data, specifically charting the values of contacts Per dial, RPC per Dial, and Success per Dial for each hour.

The information in the Best time to Call Analysis report is displayed by Time and includes:

- Number of Dials
- Number of Contacts per Dial
- Percent of contacts per Dial
- Number of RPC per Dial
- Percent of RPC per Dial
- Percent of RPC per Contact
- Number of Success per Dial
- Percent of Success per Dial
- Percent of Success per Contact
- Percent of Success per RPC

Parameters

The following parameters can be specified for the Best time to Call Analysis report:

- **Start Data/Time** Required parameter
- **End Date/Time** Required parameter
- **Campaign**
- **Site ID**
- **Campaign Group**

Sample report

Click on the image below to view a sample of this report.

The screenshot shows a 'Sample Report' from GENESYS. It contains a table with the following columns: Activity, Program, Start Date, End Date, Max Profit, Min Profit, Max Loss, Min Loss, Max Gain, Min Gain, Max Loss, Min Loss, Max Gain, Min Gain, Max Loss, Min Loss, Max Gain, Min Gain, Max Loss, Min Loss, Max Gain, Min Gain. The table lists several activities including 'Development', 'Market', and 'Market' with various dates and numerical values.

Report Element Descriptions

Within a DateTime range, the stored procedures provides summarized data per Dialer siteID, Campaign name, Campaign Group, Date(UTC), Hour(UTC). All rows are grouped and summarized by the Client local Hour.

Report Element	Database Column or Computation
Time	Local Hour of CallPlacedHourUTC
Dials	Sum(TotalCalls)
Contacts #	Sum(TotallsContact)
Contacts Per Dial	$(\text{Sum (TotallsContact)/Sum (TotalCalls)}) * 100$
RPC #	Sum(TotallsRPC)
RPC Per Dial	$(\text{Sum (TotallsRPC)/Sum (TotalCalls)}) * 100$
RPC Per Contact	$(\text{Sum (TotallsRPC)/Sum (TotallsContact)}) * 100$
Success #	Sum(TotallsSuccess)
Success Per Dial	$(\text{Sum (TotallsSucess)/Sum (TotalCalls)}) * 100$
Success Per Contact	$(\text{Sum (TotallsSucess)/Sum (TotallsContact)}) * 100$
Success Per RPC	$(\text{Sum (TotallsSucess)/Sum (TotallsRPC)}) * 100$

Call Answer Distribution Report

The Call Answer Distribution report displays summary data and a graph with analysis on the seconds to answer a call. This report provides guidance on where to set the no-answer timeout. The line chart uses the calculations of the tabular data, and it charts the number of answered calls per seconds to answer.

The information in the Call answer Distribution Report includes:

- Number of calls
- Number of calls answered within seconds
- Percent of calls answered within seconds
- A Running Total of the percent of calls answered within seconds

Parameters

The following parameters can be specified for the Call Answer Distribution report:

- Start Date/Time
- End Date/Time
- Campaign
- Site ID
- Campaign Group
- Show detail

Sample report

Click on the image below to view a sample of this report.

The screenshot shows a 'Sample Report' from Genesys. The report title is 'Sample Report' and it includes the Genesys logo. Below the title, there is a table with columns for 'Group', 'Start/End Time', 'Calls', 'Answered', 'Answered %', 'Calls %', 'Calls Answered', 'Calls Answered %', 'Calls Answered %', and 'Calls Answered %'. The table contains several rows of data, including a summary row for 'Total' and several rows for 'Calls' and 'Answered' counts.

Report Element Descriptions

Report Element	Database Column or Computation
Calls	sprpt_DialerCallDistribution.TotCalls
Answered within seconds	sprpt_DialerCallDistribution.SecondsToAnswer
Calls %	(sprpt_DialerCallDistribution.TotCalls / Sum(sprpt_DialerCallDistribution.TotCalls, Rule GroupID))*100
Running total %	(Running Total on sprpt_DialerCallDistribution.TotCalls /

Sum(sprpt_DialerCallDistribution.TotCalls, Rule GroupID))*100

Interaction Optimizer

Interaction Optimizer Reports

Interaction Optimizer Reports present information on agents' and workgroups' schedule adherence and conformance. For more information on specific reports, click on a report name under **Interaction Optimizer**.

Schedule Adherence and Conformance Detail Report

The Schedule Adherence and Conformance Detail report displays detailed information on an agent's adherence and conformance by date.

The report details are grouped by Workgroups and Agents. The report details include:

- Date
- Adherence percentage by date
- Conformance percentage by date
- Agent name
- Adherence percentage by agent
- Conformance percentage by agent
- Scheduled time
- Scheduled duration
- Scheduled activity
- Actual time
- Actual duration
- Actual activity*
- Exceptions

* The **Actual Activity** could contain multiple values if multiple status changes for the same activity type happened with the period of start time and end time slot.

Parameters

Use the following parameters to include or exclude data on the report. For example, if you do not specify an Exception Filter parameter, all Exceptions are included in the report. If you specify an Exception Filter, only the Exceptions that match the one you specified are included in the report. Parameters are displayed in the header section of the report. Required parameters are included in the header. The remaining parameters are included in the report header only if you specified them when you ran the report.

The following parameters can be specified for the Schedule Adherence and Conformance Detail report:

- Date Range (required)
- Time Zone (required)
- Group By (required)
- Exception Filter
- Order By
- Scheduling Unit (required)

Sample Report

Click on the image below to view a sample of this report.

The screenshot shows a 'Sample Report' header with the GENESYS logo. Below the header is a table with the following columns: SiteID, Agent, Appointment, Max Avail, Max Avail, Utilization, Agent Util, Call Time, Agent Util, Max Avail, % Util, % Util. The table contains several rows of data, including a summary row for 'All Agents' and individual rows for agents like 'Agent A', 'Agent B', and 'Agent C'.

Schedule Adherence and Conformance Summary Report

The Schedule Adherence and Conformance Summary report displays a summary chart on agents' adherence and conformance by date.

The report summary includes:

- Agent's name
- Adherence percentage by date
- Conformance percentage by date

Parameters

Use the following parameters to include or exclude data on the report. For example, if you do not specify an Exception Filter parameter, all Exceptions are included in the report. If you specify an Exception Filter, only the Exceptions that match the one you specified are included in the report. Parameters are displayed in the header section of the report. Required parameters are included in the header. The remaining parameters are included in the report header only if you specified them when you ran the report.

The following parameters can be specified for the Schedule Adherence and Conformance Summary report:

- Date Range (required)
- Time Zone (required)
- Interval (required)
- Group By
- Order By
- Exception Filter
- Target
- Show Charts
- Scheduling Unit (required)

Sample Report

Click on the image below to view a sample of this report.

The screenshot shows a 'Sample Report' from Genesys. The report title is '2024-03-01 10:00:00' and it is for 'SiteID: 123456789'. The report contains a table with columns for 'Agent', 'Status', 'Program Available', 'Priority Per Line', 'Max Agent Duration', 'Abandonment %', 'Wait Time', 'Call Time', 'Agent Duration', 'Max Agent Duration', 'Min Agent Duration', and 'Total Minutes'. The table lists various agent statuses and their corresponding metrics.

Individual Schedule Detail Report

The Individual Schedule Detail report is an Interaction Optimizer scheduling report. It shows the work activities of the Interaction Optimizer published schedule for an individual. Use this report to view planned activities for an individual's work load based on an Interaction Optimizer schedule generated for anticipated workload. This report shows start and stop times for each activity, and includes Total and Paid hours.

Parameters

Specify a Schedule Name and a start and end range to include in a report. You can also specify a Published Date and user names to include in a report.

Individual Schedule Summary Report

The Individual Schedule Summary report is an Interaction Optimizer scheduling report. It shows the totals for scheduled activities for an individual based on an Interaction Optimizer published schedule. Use this report to view a summary of planned activities for an individual's projected workload. This report summarizes the total amount of time for each activity per day, and it includes Total and Paid hours.

Parameters

Specify a Schedule Name and a start and end range to include in a report. You can also specify a Published Date and user names to include in a report.

Schedule (Text Based) Report

The Schedule (text based) is a report based on the published employee schedules generated by Interaction Optimizer. This report displays a text-based graph of individuals' start and end times--in 15 minute intervals--of planned work shift activities, for a specified date and time range. Use this report to view a summary of planned work shift activities for a group of individuals in a text-based graph format. This graph can be printed in color or black and white.

Parameters

Specify a Schedule Name and a start and end range to include in a report. You can also specify a Published Date, user names, and the beginning and ending date and time to include in a report.

Request Date		Date agent requested time off
Agent	Agents	Agent name
Request Type	RequestType	Lists the type of time-off request, such as Full Day
Request State	RequestState	State that the request is in, such as Approved
Time Off Duration	TimeOffDurationTimeFormat	Listed in hh:mm:ss
Paid Time Off	PaidTimeOffFlag	Indicates Yes/No value

Record Selection Criteria for this report includes:

{IO_TimeOffRequest.StartDateTimeUTC} in {?StartDate_GMT} to {?EndDate_GMT} and

{IO_SchedulingUnit.SchedulingUnitName} in {?SchedulingUnit}

and {IO_TimeOffRequest.RequestState} in {?RequestState}

and {IO_TimeOffRequest.RequestType} in {?RequestType}

and {IO_Agent.UserName} in {?Agents}

Interaction Process Automation

Interaction Process Automation Reports

Interaction Process Automation Reports present information on your organization's business processes, compiling and displaying information on those tasks that flow through your defined business processes. For more information on specific reports, click on a report name under **Interaction Process Automation**.

Process Detail Report

The Process Detail report displays detailed information on the States of specific business processes. The details are grouped by Process and Process ID, and displayed by process State, for the specified period of time.

The report details for the process include:

- Process name
- Process ID
- Dynamic Details associated with the process
- Total work time on all agent tasks for the process
- States associated with the process
- Date and time the state started
- Date and time the state ended
- Duration of time the process was in the state
- Due date and time assigned to user to complete the task
- User or queue assigned to the task
- Pick up date and time the task was accepted by the agent
- Length of time agent worked on the task
- Notes related to the instance of the process
- Interactions related to the instance of the process

Parameters

Use the following parameters to include or exclude data on the report. For example, if you do not specify a Process Status, all Process Statuses are included in the report. If you specify a Process Status, only the Process Status that matches the one you specified is included in the report. Some parameters allow for multiple selections. Parameters are displayed in the header section of the report. Date Range is included in the header because it is a required parameter. The remaining parameters are included in the report header only if you specified them when you ran the report.

The following parameters can be specified for the Process Detail report:

- Date Range (required)
- Process Status
- Process ID

- Process Version
- User
- Process

Work Items Report

The Work Items report displays detailed information on Work Items performed for a process. The information is grouped by user and then by Work Item, and includes Dynamic Details related to Work Items.

The detailed information in the report includes:

- Process name
- Total Duration of time for all Work Items for the process
- Total Work Time agents spent on all Work Items
- Dynamic Details associated with the Work Item
- Process ID
- Date and time the Work Item started

- Date and time the Work Item ended
- Duration of time for the instance of the Work Item
- Date and Time the instance of the Work Item was picked up by the agent
- Length of time an agent spent working on the instance of the Work Item
- Agent or queue assigned to complete a Work Item
- Work Item name
- Average amount of time the user or queue users spent working on the picked-up tasks associated with the Work Item
- Average duration of all the tasks associated with the Work Item

Parameters

Use the following parameters to include or exclude data on the report. For example, if you do not specify a Process Version, all Process Versions are included in the report. If you specify a Process Version, only the Process Version that matches the one you specified is included in the report. Some parameters allow for multiple selections. Parameters are displayed in the header section of the report. Date Range is included in the header because it is a required parameter. The remaining parameters are included in the report header only if you specified them when you ran the report.

The following parameters can be specified for the Process Detail report:

- Date Range (required)
- User
- Process Version
- Process

Process Summary Report

The Process Summary report displays information on your business processes sorted by Date/Time and Status. The statistics are displayed by Process name and are summarized by Process ID for each instance.

The summarized statistics include:

- Dynamic Details associated with the process
- Duration of time the instance of the process ran
- Status of the instance of the process and reason for the status, if available
- Date and Time the instance of the process began
- Date and Time the instance of the process ended
- Agent or process that launched the instance of the process
- Version of the instance of the process

Parameters

Use the following parameters to include or exclude data on the report. For example, if you do not specify a Process Status, all Process Statuses are included in the report. If you specify a Process Status, only the Process Status that matches the one you specified is included in the report. Some parameters allow for multiple selections. Parameters are displayed in the header section of the report. Date Range is included in the header because it is a required parameter. The remaining parameters are included in the report header only if you specified them when you ran the report.

The following parameters can be specified for the Process Detail report:

- Date Range (required)
- Process ID
- Process Status
- Process Version
- User
- Process

Line Reports

Line Reports

Line Reports display details on line statistics and line groups. For more information on specific Line Reports, click on a report name under **Line Reports**.

(Graph) Calls Entered Line Group by Hour Report

This graph shows the number of inbound and outbound calls attempted on each line group for every hour of a specified day.

This graph can be used to evaluate calling volumes throughout the day on each line group. Each line group's call volume is plotted for each hour to allow system administrators to see line traffic at a glance. Call attempts are evaluated versus actual connected calls to give a true picture of line group activity.

Important note for SIP users

The Line Group reports were *not* designed to report on a SIP Line configuration. As a result, the information calculated for the Line Group reports might not be accurate for SIP lines.

Parameters

You specify the range of dates and times, site IDs, and line groups as parameters. The line groups are defined in Interaction Administrator on the IC server. You can specify all or part of a day in the time range. Each line in the data represents one interval, or in our case thirty minutes (1800 seconds) by default.

Graph Elements

Report Field or Value

Field or Value Description

Line Group

LineGroupID

The line group names specified in the range. Each line group ID is shown in the key at the right. The line group IDs match the names of the line groups as they are configured in Interaction Administrator.

Hour

dIntervalStart

This column displays the starting hour of the interval.

Number Entered (1)

nEntered

The number of calls that entered or appeared on the lines in the line group.

Number Outbound (2)

nEnteredOutbound

The number of call that entered the line group for outbound use.

Number Outbound Blocked (3)

nOutboundBlocked

The number of calls that tried to enter the line group for outbound use, but were blocked because all the lines in the line group were busy.

% All Busy (4)

$(tAllBusy / tActiveLines) * 100$

The percentage of time that **ALL** the lines in the line group were busy.

% Busy (5)

$(tSeized / tActiveLines) * 100$

The percentage of time that the lines in the line group were busy.

Number Inbound (6)

$nEntered - nOutboundEntered$
(6)

The number of calls that entered the line group for inbound use.

Hourly intervals (horizontal)

InitiatedTime

The activity intervals for recording call data, shown under the bottom of the graph.

Number of calls (vertical)	Count of LineActivity.InitiatedDate entries	A sum of the number of inbound and outbound calls attempted on each line.
----------------------------	---	---

Record Selection Criteria:

{!LineGroupStats.GroupId} in {?StartLineGroup} to {?EndLineGroup} and
 {!LineGroupStats.dIntervalStart} in {?StartDateTime} to {?EndDateTime} and
 {!LineGroupStats.SiteId} in {?StartSiteID} to {?EndSiteId}

Note
 The information you display is based on the parameters you enter at runtime. You should view this chart in full color. The chart will not be useful in gray scale or black and white.

(Graph) Calls Inbound Entered Line Group by Hour Report

This graph shows the number of inbound call attempts per hour for each line group during an interval you specify. This includes all inbound calls that reached a Connected state (that is, connected to the IC server, not necessarily Client_Connected where an agent answered a call).

Important note for SIP users
 The Line Group reports were *not* designed to report on a SIP Line configuration. As a result, the information calculated for the Line Group reports might not be accurate for SIP lines.

Parameters

You specify the range of dates and times, site IDs, shift times, and line groups as parameters. The line groups are defined in Interaction Administrator on the IC server. You can specify all or part of a day in the time range. You can specify if you want to see detail or summary and if want to print the graph.

Each line in the data represents one interval, or in our case a half an hour. In order to report by hour, you need to add the 12:00 analog information to the 12:30 analog information $85/7200 = 1.18$. The formula IC uses is the $(\text{Sum}(tAllBusy)/\text{Sum}(tActiveLines))*100$ to calculate the percentage all busy by hour.

Graph Elements

Report Field or Value

Field or Value Description

Line Group

LineGroupID

The line group names specified in the range. Each line group ID is shown in the key at the right. The line group IDs match the names of the line groups as they are configured in Interaction Administrator.

Hour

dIntervalStart

This column displays the starting hour of the interval.

Number Entered (1)

nEntered

The number of calls that entered or appeared on the lines in the line group.

Number Outbound (2)

nEnteredOutbound

The number of call that entered the line group for outbound use.

Number Outbound Blocked (3)

nOutboundBlocked

The number of calls that tried to enter the line group for outbound use, but were blocked because all the lines in the line group were busy.

% All Busy (4)

$(tAllBusy / tActiveLines) * 100$

The percentage of time that **ALL** the lines in the line group were busy.

% Busy (5)

$(tSeized / tActiveLines) * 100$

The percentage of time that the lines in the line group were busy.

Number Calls (6)

$nEntered - nOutboundEntered$
(6)

The number of calls that entered the line group for inbound use.

Hourly intervals (horizontal)

InitiatedTime

The activity intervals for recording call data, shown under the bottom of the graph.

Number of calls (vertical)

Sum of CallDirection=Inbound,
LineId

The number of inbound call attempts reported for each line specified. This includes abandoned calls.

Line Group names

nEntered

The name of each line group specified in the report. Each line is color coded

in the key at the right.

Record Selection Criteria:

{|LineGroupStats.GroupId} in {?StartLineGroup} to {?EndLineGroup} and

{|LineGroupStats.dIntervalStart} in {?StartDateTime} to {?EndDateTime}and

{|LineGroupStats.SiteId} in {?StartSiteID} to {?EndSiteId}

Note

The information you display is based on the parameters you enter at runtime. You should view this chart in full color. The chart will not be useful in gray scale or black and white.

(Graph) Calls Outbound Blocked Line Group by Hour Report

This graph shows all outbound blocked line group calls by hour. IC sorts the outbound calls by blocked line group name.

Important note for SIP users

The Line Group reports were *not* designed to report on a SIP Line configuration. As a result, the information calculated for the Line Group reports might not be accurate for SIP lines.

Parameters

You specify the range of dates and times, site IDs, shift times, and line group as parameters. The line group are defined in Interaction Administrator on the IC server. You can specify all or part of a day in the time range. You can specify if you want to see detail or summary and if want to print the graph.

Each line in the data represents one interval, or in our case a half an hour. In order to report by hour, you need to add the 12:00 analog information to the 12:30 analog information $85/7200 = 1.18$. The formula IC uses is the $(\text{Sum}(tAllBusy)/\text{Sum}(tActiveLines))*100$ to calculate the percentage all busy by hour.

The report is based on a logging subsystem that is updated every 10 seconds plus time dependent on implementation architecture or topology.

Note

In order to produce more readable graph output, select a narrow range of date / time Parameters and one or more specific line groups.

Visual Elements

Graph Element

Report Field or Value

Field or Value Description

Line Group

LineGroupId

The line group names specified in the range. Each line group ID is shown in the key at the right. The line group IDs match the names of the line groups as they are configured in Interaction Administrator.

Hour

dIntervalStart

This column displays the starting hour of the interval.

Number Entered

nEntered

The number of calls that entered or appeared on the lines in the line group.

Number Outbound

nEnteredOutbound

The number of call that entered the line group for outbound use.

Number Outbound Blocked

nOutboundBlocked

The number of calls that tried to enter the line group for outbound use, but were blocked because all the lines in the line group were busy.

% All Busy

$(tAllBusy / tActiveLines) * 100$

The percentage of time that **ALL** the lines in the line group were busy.

% Busy

$(tSeized / tActiveLines) * 100$

The percentage of time that the lines in the line group were busy.

Number Inbound

nEntered – nOutboundEntered

The number of calls that entered the line group for inbound use.

Hourly intervals (horizontal)

InitiatedTime

The activity intervals for recording call data, shown under the bottom of the graph.

Number of calls (vertical)

Count of LineActivity.InitiatedDate entries

A sum of the number of inbound and outbound calls attempted on each line.

Record Selection Criteria:

{!LineGroupStats.GroupId} in {?StartLineGroup} to {?EndLineGroup} and

{\LineGroupStats.dIntervalStart} in {?StartDateTime} to {?EndDateTime} and
 {\LineGroupStats.SiteId} in {?StartSiteID} to {?EndSiteId}

Note

The information you display is based on the parameters you enter at runtime. You should view this chart in full color. The chart will not be useful in gray scale or black and white.

(Graph) Calls Outbound Line Group by Hour Report

This graph shows the number of outbound call attempts per hour for each line group (LineGroupID), during an interval you specify. Outbound call attempts include all calls (for example, wrong or invalid numbers, and busy calls).

Important note for SIP users

The Line Group reports were *not* designed to report on a SIP Line configuration. As a result, the information calculated for the Line Group reports might not be accurate for SIP lines.

Parameters

You specify the range of dates and times, site IDs, shift times, and line groups as parameters. The line groups are defined in Interaction Administrator on the IC server. You can specify all or part of a day in the time range. You can specify if you want to see detail or summary and if want to print the graph. To make the graph more readable, specify a limited range of line identifiers.

Each line in the data represents one interval, or in our case a half an hour. In order to report by hour, you need to add the 12:00 analog information to the 12:30 analog information $85/7200 = 1.18$. The formula IC uses is the $(\text{Sum}(tAllBusy)/\text{Sum}(tActiveLines))*100$ to calculate the percentage all busy by hour.

Graph Elements

Report Field or Value

Field or Value Description

Line Group	LineGroupID	The line group names specified in the range. Each line group ID is shown in the key at the right. The line group IDs match the names of the line groups as they are configured in Interaction Administrator.
Hour	dIntervalStart	This column displays the starting hour of the interval.
Number Entered	nEntered	The number of calls that entered or appeared on the lines in the line group.
Number Outbound	nEnteredOutbound	The number of call that entered the line group for outbound use.
Number Outbound Blocked	nOutboundBlocked	The number of calls that tried to enter the line group for outbound use, but were blocked because all the lines in the line group were busy.
% All Busy	$(tAllBusy / tActiveLines) * 100$	The percentage of time that ALL the lines in the line group were busy.
% Busy	$(tSeized / tActiveLines) * 100$	The percentage of time that the lines in the line group were busy.
Number Inbound	$nEntered - nOutboundEntered$	The number of calls that entered the line group for inbound use.
Number of calls (vertical)	nEnteredOutbound	The number of outbound call attempts reported for each line specified. This includes busy and incomplete calls.
Line Group names (horizontal)	Line group graph parameter 2 = nEnteredOutbound	The name of each line group specified in the report. Each line group is color coded in the key at the right.

Record Selection Criteria:

{|LineGroupStats.GroupId} in {?StartLineGroup} to {?EndLineGroup} and
{|LineGroupStats.dIntervalStart} in {?StartDateTime} to {?EndDateTime} and
{|LineGroupStats.SiteId} in {?StartSiteID} to {?EndSiteId}

Note
The information you display is based on the parameters you enter at runtime. You should view this chart in full color. The chart will not be useful in gray scale or black and white.

(Graph) Erlang Study Report

This report gives line group usage in terms of Erlang or CCS (see below). These numbers can be used with Erlang calculators to determine if the proper number of lines is available to handle the call utilization.

Simply defined, an Erlang is the total line usage divided by the number of seconds available on one line in one hour (for example, one Erlang is equal to one full hour of conversation).

Parameters

You specify the range of dates and times, site IDs, shift times, and line groups as parameters. The line groups are defined in Interaction Administrator on the IC server. You can specify if you want to see detail or summary and if want to print the graph.

Each line in the data represents one interval, or in our case a half an hour. In order to report by hour, you need to add the 12:00 analog information to the 12:30 analog information $85/7200 = 1.18$. The formula IC uses is the $(\text{Sum}(tAllBusy)/\text{Sum}(tActiveLines))*100$ to calculate the percentage all busy by hour.

You can specify all or part of a day in the time range.

Detail Elements

Report Field or Value

Field or Value Description

Site ID

SiteID

The name of the Site ID as specified in the range.

Erlang Study Date

dIntervalStart

The date for each day included in the date range selected for this report.

Hour

dIntervalStart

The hours for the selected date in the date range

Total Calls Added

nEntered

The total number of calls that entered the line for the specified date range

Total Usage	tSeized	The total amount of time the lines in the line group were seized or being used.
Erlangs	$tSeized / tResourceAvailable$	Erlang is a measure of traffic volume. It is the call usage divided by the sum of resource available time, within the hour.
CCS	$(tSeized / tResourceAvailable) * 36$	A centa second is equivalent to 36 Erlangs. This is just another way to present line utilization.
Erlangs (vertical)	$tSeized / 3600$	This axis shows Elangs.
Hour (horizontal)	dIntervalStart	This axis displays the starting hour of the interval.

Record selection criteria:

{lLineGroupStats.dIntervalStart} in {?StartDateTime} to {?EndDateTime} and
 {lLineGroupStats.GroupId} in {?StartLineGroup} to {?EndLineGroup} and
 {lLineGroupStats.SiteId} in {?StartSiteId} to {?EndSiteId} and
 {@StatusTime} in {?ShiftStartTime} to {?ShiftEndTime}

Additional Information:

Erlang – a Unit of Traffic

An *Erlang* is a unit of telecommunications traffic measurement. Strictly speaking, an Erlang represents the continuous use of one voice path. In practice, it is used to describe the total traffic volume of one hour.

For example, if a group of user made 30 calls in one hour, and each call had an average call duration of 5 minutes, then the number of Erlangs this represents is worked out as follows:

Calculating Erlangs from Minutes:

Minutes of traffic in the hour	number of calls x duration
Minutes of traffic in the hour	30 x 5
Minutes of traffic in the hour	150
Hours of traffic in the hour	150 / 60
Hours of traffic in the hour	2.5
Traffic figure =	2.5 Erlangs

Erlang traffic measurements are made in order to help telecommunications network designers understand traffic patterns within their voice networks. This is essential if they are to successfully design their network topology and establish the necessary trunk group sizes.

Erlang traffic measurements or estimates can be used to work out how many lines are required between a telephone system and a central office (PSTN exchange lines), or between multiple network locations.

CCS = The sum of the number of busy circuits, provided the circuits were observed every hundred seconds. There are 36 observations in an hour. One Erlang equals 36 CCS.

This information is obtained from Westbay Engineers Limited. For more information on Erlangs, visit their Web site at www.erlang.com.

Note

The information you display is based on the parameters you enter at runtime. View this chart in full color, as the chart will not be useful in gray scale or black and white.

(Graph) Percent All Lines Busy by Hour Report

This report graphs the percentage of all lines busy in a particular line group. This graph only shows times when all lines in the line group are busy with activity and additional calls could not be placed in the line group. You can use this graph to evaluate line traffic distribution and the need for line resources.

Important note for SIP users

The Line Group reports were *not* designed to report on a SIP Line configuration. As a result, the information calculated for the Line Group reports might not be accurate for SIP lines.

Parameters

You specify the range of dates and times, site IDs, shift times, and line groups as parameters. The line groups are defined in Interaction Administrator on the IC server. You can specify all or part of a day in the time range. You can specify if you want to see detail or summary and if want to print the graph. In order to produce more readable graph output, select a narrow range of date / time parameters and one or more specific line groups.

Each line in the data represents one interval, or in our case a half an hour. In order to report by hour, you need to add the 12:00 analog information to the 12:30 analog information $85/7200 = 1.18$. The formula IC uses is the $(\text{Sum}(tAllBusy)/\text{Sum}(tActiveLines))*100$ to calculate the percentage all busy by hour.

The report is based on a logging subsystem that is updated every 10 seconds plus time dependent on implementation architecture or topology.

Report Elements

Report Field or Value

Field or Value Description

Site ID	SiteID	The name of the Site ID as specified in the range.
Date	DintervalStart	The date for each day in the specified range.
Line Group	GroupID	The name of the line group in the specified range.
Avg Lines Available	tResourceAvailable / nDuration <u>AverageLinesAvailable</u>	The average number of lines available in the line group in the specified range.
Interval Start	dIntervalStart	The time the interval started.
Duration per Line	nDuration	The amount of time the average line is available in the line group.
Max Avail Duration	tResourceAvailable	The maximum time available for the entire line group.
Utilization	tSeized	The amount of time that the lines in the line group were busy or seized.
% Utilization	(tSeized / tResourceAvailable) * 100	The percentage of time that the lines in the line group were busy or seized.

Total Calls	nEntered	The total number of calls for each line group in the specified range.
Calls Out	nOutboundEntered	The number of outbound calls that entered the line group during the specified date / time range.
% of Calls Out	$nOutboundEntered / nEntered * 100$	The percentage of outbound calls that entered the line group during the specified date / time range.
Avg. Call Duration	tSeized / nEntered	The average amount of time each call occupied the line in the line group.
Max Calls Entered	mEntered	The maximum number of calls that entered the line group at the same time. This number can never exceed the number of lines available.
% All Busy	$(tAllBusy / tResourceAvailable) * 100$	The percentage of time that all the lines in the line group were blocked or seized.
% Out Blocked	$(nOutboundBlocked / (nEnteredOutbound + nOutboundBlocked)) * 100$	The percentage of outbound calls that were blocked in a line group.

Record Selection Criteria:

Line Group Identification Report

This report shows the line group membership and the line configuration information to assist configuration management and problem resolution.

Important note for SIP users

The Line Group reports were *not* designed to report on a SIP Line configuration. As a result, the information calculated for the Line Group reports might not be accurate for SIP lines.

Parameters

You specify the range of line group identifiers, site IDs, and phone number sort flag as parameters. The line identifiers are defined in Interaction Administrator on the IC server. You can specify all or part of a day in the time range.

The report is based on a logging subsystem that is updated every 10 seconds plus time dependent on implementation architecture or topology.

Report Element

Report Field or Value

Field or Value Description

Site ID

SiteID

The name of the Site ID as specified in the range.

Reporting Flag

ReportFlag

Indicates if this line group is included in reports. Value = On or Off.

Dial Group Flag

DialGroupFlag

Indicates if this line group is included in a dial group. Value = On or Off.

GroupID

GroupID

The name of the line group in the specified range.

LineID

LineID

The line identifier names specified in the range. Each line ID is shown in the key at the right. The line IDs match the names of the lines as they are configured in Interaction Administrator.

Active Line

ActiveFlag

The flag that indicates if this line group is active or inactive. Value = Yes or No. This information prints on the first occurrence, then again only when it changes. This avoids clutter in the

Phone Number	PhoneNumber	report. The phone number of the line group in the specified range.
Line Type	LineType	The type of line in the line group in the specified range. This information prints on the first occurrence, then again only when it changes. This avoids clutter in the report.
Direction	LineDirection	The direction of the line in the line group in the specified range.

Record Selection Criteria for this report includes:

{LineGroupConfig.GroupId} in {?StartLineGroup} to {?EndLineGroup} and

{LineGroupConfig.SiteId} in {?StartSiteId} to {?EndSiteId}

Line Group Least Used Trunks by Day Report

This report shows the least used lines for each reporting line group for a specified day. It displays the Line Group ID, Description, Line ID, and the number of calls received on a particular line.

Important note for SIP users

The Line Group reports were *not* designed to report on a SIP Line configuration. As a result, the information calculated for the Line Group reports might not be accurate for SIP lines.

Parameters

You specify the range of dates and times, line groups, site IDs, and number of lines as parameters. IC sorts this report by SiteID, GroupID, and utilization. The number of lines parameter is used to show the number of lines requested by the user. If the user requests more lines than are available in a line group, then all lines will be shown. The line identifiers are defined in Interaction Administrator on the IC server. You can specify all or part of a day in the time range. By default, the number of lines to show is 5.

The report is based on a logging subsystem that is updated every 10 seconds plus time dependent on implementation architecture or topology.

Report Field or Value

Field or Value Description

Site ID

SiteID

The name of the Site ID as specified in the range.

(none)

GroupID

The name of the line group in the specified range. The * line group is the summary line group and includes the information for all the line groups.

Date

dIntervalStart

The date of the least used lines.

Line ID

LineID

The name of the line selected in the specified range.

Group ID

GroupID

The name of the line group selected in the specified range.

Utilization

tSeized

The amount of time that the line in the line group were busy or seized for the selected day.

Total Calls

nEntered

The number of call that entered the line during the specified date / time range.

Calls Out

nOutboundEntered

The number of outbound calls that entered the line during the specified date / time range.

Site ID

SiteID

The name of the Site ID as specified in the range.

Avg. Call Duration

tSeized / nEntered

The average amount of time each call occupied the line in the line group.

Record Selection Criteria:

{LineGroupConfig.GroupID} in {?StartLineGroup} to {?EndLineGroup} and

Line Summary and Detail

The Line Summary and Detail report displays line statistics. These statistics are grouped and summarized by site, line, month, week, day, and interval. From the summary page, click the date hyperlink to display the detailed interactions. Line Summary and Detail statistics include:

- Average number of lines available
- Duration of time the line was in use
- Maximum duration a line was available
- Total amount of time the line was in use
- Percentage of time the line was in use
- Total number of calls for a line
- Number of outbound calls on a line
- Percentage of outbound calls on a line
- Average call duration on a line
- Percentage of outbound calls blocked on a line

Parameters

The following parameters can be specified for the Line Summary and Detail report.

Required Parameter

- Date/Time range

Group by and Summary Parameters

- Subtotal by Month or Week
- Show Detail

Additional parameter

- Line

Parameter Descriptions

Line Group Summary and Detail

The Line Group Summary and Detail report displays line group statistics. These statistics are grouped and summarized by site, group, month, week, day, and interval. From the summary page, click the date hyperlink to display the detailed interactions. Line Group Summary and Detail statistics include:

- Group name
- Average number of lines available
- Duration of time the line was in use
- Maximum duration a line was available
- Total amount of time the line was in use
- Percentage of time the line was in use
- Total number of calls for a line
- Number of outbound calls on a line
- Percentage of outbound calls on a line
- Average call duration on a line
- Maximum calls entered
- Percentage of All Busy
- Percentage of outbound calls blocked on a line

Parameters

The following parameters can be specified for the Line Group Summary and Detail report.

Queue Reports

Queue Reports

Queue Reports display detailed statistics on workgroup queues. For more information on specific Queue Reports, click on a report name under **Queue Reports**.

Interaction Reporter Help

(Graph) Abandoned Call Profile Report

This graph plots the number of abandoned calls during each specified interval of a specified date range. An abandoned call occurs when a call is on hold while it is alerting on a queue and the caller disconnects. The caller perceives the call is on hold. You may also define an abandoned interaction as when an interaction enters an INACTIVE state without first entering CLIENT_CONNECTED state while on a queue. This graph sorts abandoned calls by queue name and includes a summary graph page named Grand Total Sum All Queues.

Parameters

You specify the range of date times, activity times, site IDs, and workgroup queues as parameters. You can specify all or part of a day in the time range. You can specify if you want to see detail or summary and if you want to print the graph.

If you run this report for a 24 hour period with intervals less than the default of 30 minutes, it could result in too much information on the horizontal axis, thus making it difficult for you to read the report.

Each line in the data reports one interval, or in this case thirty minutes (1800 seconds) by default.

(Graph) Answered Call Profile Report

This graph plots the number of answered calls during each specified interval of a specified date range. An answered call occurs when a call is alerting on a queue and the agent picks-up the call.

This graph sorts answered calls by queue name and includes a summary graph page named **Grand Total Sum All Queues**.

Parameters

You specify the range of date times, activity times, site IDs, and workgroup queues as parameters. You can specify all or part of a day in the time range. You can specify if you want to see detail or summary and if want to print the graph.

Note

If you run this report for a 24 hour period with intervals less than the default of 30

minutes, it could result in too much information on the horizontal axis, thus making it difficult for you to read the report.

Each line in the data represents one interval, or in this case thirty minutes (1800 seconds) by default.

(Graph) Profile of Average Speed of Answer Report

This graph plots the average speed to answer time of calls during each specified interval of a specified date range. The speed to answer time is the time a call is alerting on a queue until an agent picks-up the call. The graph sorts the average speed to answer time by queue name.

Parameters

You specify the range of date times, activity times, site IDs, and workgroup queues as parameters. You can specify all or part of a day in the time range. You can specify if you want to see detail or summary and if want to print the graph.

Each line in the data represents one interval, or in this case thirty minutes (1800 seconds) by default.

Note
 If you run this report for a 24 hour period with intervals less than the default of 30 minutes, it could result in too much information on the horizontal axis, thus making it difficult for you to read the report.

Queue	Site	Program Available	Status	Max Hold	Hold	Wait	Wait	Wait	Wait	Wait	Wait	Wait	Wait	Wait	Wait

Graph Element

Report Field or Value

Field or Value Description

Queue

cName

The name of a queue in the specified

range.

Intervals (horizontal axis)	dIntervalStart	The activity intervals for recording call data, shown under the bottom of the graph. The default is 30 minute intervals, but the time interval is controlled by the QueuePeriodStatisticsInterval server parameter in Interaction Administrator.
Average Speed of Answer	$t_{\text{AnsweredACD}} / n_{\text{AnsweredACD}}$	The average amount of time an interaction spent alerting before it was answered by the agent. The total amount of time the interactions were alerting the agents divided by the total number of ACD interactions answered for the specified range.

Record selection criteria:

{WrkgrpQueueStats.dIntervalStart} in {?StartDateTime} to {?EndDateTime} and
{@DateTimeToTime} in {?StartActivityTime} to {?EndActivityTime} and
{WrkgrpQueueStats.cType}="W" and
{WrkgrpQueueStats.cReportGroup} = "*" and
{WrkgrpQueueStats.SiteId} in {?StartSiteId} to {?EndSiteID} and
{WrkGrpQueueStats.cReportGroup} <> "-" and
(IsNull({WrkGrpQueueStats.cHKey3}) or {WrkGrpQueueStats.cHKey3} = "*" or
{WrkGrpQueueStats.cHKey3} = "") and
(IsNull({WrkGrpQueueStats.cHKey4}) or {WrkGrpQueueStats.cHKey4} = "*" or
{WrkGrpQueueStats.cHKey4} = "") and
{WrkgrpQueueStats.cName} in {?StartQueueName} to {?EndQueueName}

(Graph) Profile of Calls Abandoned in 1st Service Level Report

This graph plots the number of abandoned calls in the 1st service level during each specified interval of a specified date range. An abandoned call occurs when a call is on hold while it is alerting on a queue and the caller disconnects. The caller perceives the call is on hold. Also, you may define an abandoned interaction as when an interaction enters an INACTIVE state without first entering CLIENT_CONNECTED state while on a queue. The service level tells managers the percentage of calls answered within the goal of X seconds. Supervisors can set the goal to 10 seconds, 60 seconds, or more depending on the environment settings.

This graph sorts abandoned calls in the 1st service level by queue name and includes a summary graph page named **Grand Total Sum All Queues**.

Parameters

You specify the range of date times, activity times, site IDs, and workgroup queues as parameters. You can specify all or part of a day in the time range. You can specify if you want to see detail or summary and if want to print the graph.

Each line in the data represents one interval, or in this case thirty minutes (1800 seconds) by default.

Note

If you run this report for a 24 hour period with intervals less than the default of 30 minutes, it could result in too much information on the horizontal axis, thus making it difficult for you to read the report.

Queue Service Level

The Queue Service Level report provides the ability to see the summary and details of the configured service levels, up to 12, in an absolute or cumulative view with a percentage option.

Parameters

The following parameters can be specified for the Queue Service Level report:

Required Parameters

- Date/Time range

- Workgroup
- Media type

Group by and Summary Parameters

- Interval Configuration (Choose from Half Hour, Hour, Day of Week, Daily, Weekly, Monthly, Quarterly or Yearly)
- Service Level Format
- Show Detail
- Target Service Level Calculation (informational)

Additional parameters

- Site ID

Parameter Descriptions

Parameter	Parameter Type	Required/Optional	Description
Date Time Range	Filter	Required	The date and time range bounds
Workgroup	Filter	Required	<p>This parameter is the Workgroup queue to filter by.</p> <p>Available operators for the Workgroup parameter include: Contains, Does not contain, Ends with, Equals, Is not null, Is null, Not Equal to, and Starts with.</p>
Media Type	Filter	Required	<p>This parameter is the interaction media type to filter by.</p> <p>In the Media Type field, select a Media Type from the drop-down list. Available types are: <All>, Call, Callback, Chat, Email, Fax, Generic Object, Instant Question, SMS, Unknown, Work item, Social Conversation, or Social Direct Message.</p> <p>Available operators for the Media Type parameter include: Equals and Not Equal to.</p>
Interval Config	Format/Informational	Required	The interval for which the report is grouped by. Choose from Half Hour, Hour, Day of Week, Daily, Weekly, Monthly, Quarterly or Yearly

Service Level Format	Format/Informational	Required	Specifies whether to display partial sum or cumulative service level values
Show Detail	Format/Informational	Required	Hides or displays the detail information
Target Service Level Calculation	Format/Informational	Required	Specifies what service level target answered is divided by
Site ID	Filter	Optional	The Site ID to filter by

Sample report

Click on the image below to view a sample of this report.

The screenshot shows a 'Sample Report' from GENESYS. It displays a table with columns: Media Type, SL #, Answered, Target, and various percentages. The data rows show values for different media types and service levels, with 'Answered' and 'Target' columns being highlighted in blue.

Report Element Descriptions

Please reference the CIC Data Dictionary Technical Reference under Workgroup Queue Statistics Interval View for further technical details and column definitions.

Report Element	Database Column or Computation	Details
Workgroup	cName	The name of the workgroup queue
Media Type	cHKey3	The media type
SL # (1-12)	cServiceLevels	The numerical service level threshold as defined in the service level configuration XML (cServiceLevels)
Answered SL # (1-12)	sum(nAnsweredAcdSvcLvl#)	The number of ACD interactions answered within the service level threshold
Answered Total	sum(nAnsweredAcd)	The total number of ACD interactions answered (within and outside of configured service level thresholds)

Abandoned SL # (1-12)	sum(nAbandonAcdSvcLvl#)	The number of ACD interactions abandoned within the service level threshold
Abandoned Total	sum(nAbandonedAcd)	The total number of ACD interactions abandoned (within and outside of configured service level thresholds)

- Summary view of Answered/Abandoned interactions (across intervals)
- Detail view of Answered/Abandoned interactions (per interval) with chart data for each interval

Queue Summary and Detail

The Queue Summary and Detail report displays summarized statistical data along with detailed statistics on Workgroup Queues. The statistics are reported, grouped, and summarized by any combination of Queue, MediaType, Interval, Skill or DNIS. Data for calls Answered or Abandons is summarized and displayed when a single service level configuration is present in the data selected, but is otherwise suppressed. The report also displays a chart for Interactions Distributions and Service Level.

Parameters

The following parameters can be specified for the Queue Summary and Detail report.

Required Parameters

- Date/Time range
- Media type

Group by and Summary Parameters

- Group Order (Choose one or more from Interval (default), Queue, MediaType, Skill or DNIS)
- Interval Config (Choose from Half Hour, Hour, Day of Week, Daily, Weekly, Monthly, Quarterly or Yearly)
- Target Answered Service Level Percentage (informational)
- Target Service Level Calculation (informational)

Additional parameters

- Workgroup
- DNIS
- Skill
- Site ID

Parameter Descriptions

Parameter	Parameter Type	Required/Optional	Description
Date Time Range	Filter	Required	The date and time range bounds
Media Type	Filter	Required	<p>This parameter is the interaction media type to filter by.</p> <p>In the Media Type field, select a Media Type from the drop-down list. Available types are: <All>, Call, Callback, Chat, Email, Fax, Generic Object, Instant Question, SMS, Unknown, Work item, Social Conversation, or Social Direct Message.</p> <p>Available operators for the Media Type parameter include: Equals and Not Equal to.</p>
Group Order	Format/Informational	Required	Allows grouping of the report data. Choose one or more from Interval, Queue, Media Type, Skill or DNIS/Report Group
Interval Config	Format/Informational	Required	The interval for which the report is grouped by. Choose from Half Hour, Hour, Day of Week, Daily, Weekly, Monthly, Quarterly or Yearly
Target Answered Service Level Percentage	Format/Informational	Required	Determines the placement of the horizontal line on the graph indicating whether the activity falls above or below target
Target Service Level Calculation	Format/Informational	Required	Specifies what service level target answered is divided by

Workgroup	Filter	Optional	This parameter is the Workgroup queue to filter by. Available operators for the Workgroup parameter include: Contains, Does not contain, Ends with, Equals, Is not null, Is null, Not Equal to, and Starts with.
DNIS(cReportGroup)	Filter	Optional	The DNIS/Report Group to filter by
Skill	Filter	Optional	The Skill to filter by
Site ID	Filter	Optional	The Site ID to filter by

Sample report

Click on the image below to view a sample of this report.

The screenshot shows a 'Sample Report' from Genesys. The report title is 'Sample Report' and it includes the Genesys logo. Below the title is a table with the following columns: Queue, Program Available, Duration Per Line, Max Hour Duration, Utilization, and several percentage columns. The table contains data for various queues, including 'Queue', 'Queue', and 'Queue'. The data is presented in a grid format with alternating light blue and white rows.

Report Element Descriptions

Please reference the CIC Data Dictionary Technical Reference under Workgroup Queue Statistics Interval View for further technical details and column definitions.

Report Element	Database Column or Computation	Details
Queue	cName	The workgroup queue
Report Group	cReportGroup	The DNIS/report group

Media Type	cHKey3	The media type
Skill	cHKey4	The skill
Interval	Local of dIntervalStartUTC	The interval
OFF	sum(nEnteredAcd)	The number of ACD interactions that were offered (entered)
ANS #	sum(nAnsweredAcd)	The number of ACD interactions that were answered
ANS %	$\frac{\text{sum}(\text{nAnsweredAcd})}{\text{sum}(\text{nEnteredAcd})} * 100$	The percent of ACD interactions that were answered
ABD #	sum(nAbandonedAcd)	The number of ACD interactions that were abandoned
ABD %	$\frac{\text{sum}(\text{nAbandonedAcd})}{\text{sum}(\text{nEnteredAcd})} * 100$	The percent of ACD interactions that were abandoned
ASA	$\frac{\text{sum}(\text{tAnsweredAcd})}{\text{sum}(\text{nAnsweredAcd})}$	The average speed of answer for ACD interactions
ANS SVC LVL %	$\frac{\text{sum}(\text{nAnsweredAcdSvcLvl})}{\text{sum}(\text{nAnsweredAcd})} * 100$	The percent of interactions which were answered within the service level target
AVG TALK	$\frac{(\text{sum}(\text{tTalkAcd}) - \text{sum}(\text{tHoldAcd}))}{\text{sum}(\text{nAnsweredAcd})}$	The average talk time of ACD interactions
AVG HOLD	$\frac{\text{sum}(\text{tHoldAcd})}{\text{sum}(\text{nAnsweredAcd})}$	The average hold time for ACD interactions
AVG ACW	$\frac{\text{sum}(\text{tAcw})}{\text{sum}(\text{nAnsweredAcd})}$	The average after call work time (ACW) for ACD interactions
AVG HAND	$\frac{(\text{sum}(\text{tTalkAcd}) + \text{sum}(\text{tAcw}))}{\text{sum}(\text{nAnsweredAcd})}$	The average handle time for ACD interactions
ANS # (service levels) *	sum(nAnsweredAcdSvcLvl#)	The number of ACD interactions that were answered in service level # (based on the service level configuration)
ABD # (service levels) *	sum(nAbandonAcdSvcLvl#)	The number of ACD interactions that were abandoned in service level # (based on the service level configuration)

*When there is one consistent service level configuration, this report will display Answered and Abandoned totals for up to 6 service levels. The values for each level are dynamically displayed in the

column headers. If, for example, the report is run for two workgroups with identical service level configurations of 5, 10, 20, 30, 40 and 50 seconds respectively, the service level section would display as described above. However, if the report were to be run for two workgroups with differing service level configurations, the service level section would be suppressed.

Note: Service Levels are configurable by system administrators.

Flexible columns

There are two flexible fields available in this report which may be configured via the Flexible Fields parameter in the Queue Summary and Detail report configuration in Interaction Administrator. This parameter accepts two comma-delimited strings corresponding to the desired flex elements. By default, these columns are FLOW OUT # and HOLD #, defined as "FLOWOUT#,HOLD#" for the Flexible Field parameter's Default Value. Available flex elements and their flex config strings are defined below.

Flex Element	Flex Config String	Database Column or Computation	Details
FLOW OUT # <i>(Displayed by default)</i>	FLOWOUT#	sum(nFlowoutAcid)	The number of ACD interactions that flowed out
FLOW OUT DUR	FLOWOUTDUR	sum(tFlowoutAcid)	The ACD wait time associated with interactions that flowed out
FLOW OUT %	FLOWOUT%	$\frac{\text{sum}(\text{nFlowoutAcid})}{\text{sum}(\text{nEnteredAcid})} * 100$	The percent of ACD interactions that flowed out
HOLD # <i>(Displayed by default)</i>	HOLD#	sum(nHoldAcid)	The number of ACD interactions that were held (not the number of holds that occur)
HOLD DUR	HOLDDUR	sum(tHoldAcid)	The held time associated ACD interactions
HOLD %	HOLD%	$\frac{\text{sum}(\text{nHoldAcid})}{\text{sum}(\text{nAnsweredAcid})} * 100$	The percent of ACD interactions that were held
TALK DUR	TALKDUR	sum(tTalkAcid)	The talk time associated with ACD interactions

ACW DUR	ACWDUR	sum(tAcw)	The after call work (ACW) time
ANS DUR	ANSDUR	sum(tAnsweredAcd)	The ACD wait time associated with ACD interactions that were answered
ANS MAX	ANSMAX	max(mtAnsweredAcd)	The maximum ACD wait time associated with an ACD interaction that was answered
ABD DUR	ABDDUR	sum(tAbandonedAcd)	The ACD wait time associated with ACD interactions that abandon
ABD MAX	ABDMAX	max(CustomValue4)	The maximum ACD wait time associated with an ACD interaction that abandoned
ABD AVG	ABDAVG	sum(tAbandonedAcd) / sum(nEnteredAcd)	The average ACD wait time associated with ACD interactions that abandon
XFER #	XFER#	sum(nTransferredAcd)	The number of ACD interactions transferred (calls only, destination must be a user/workgroup queue)
XFER %	XFER%	sum(nTransferredAcd) / sum(nAnsweredAcd) * 100	The percent of ACD interactions transferred (calls only, destination must be a user/workgroup queue)
OUT #	OUT#	sum(nInternToExternCalls)	The number of workgroup-associated outbound interactions to external destinations
OUT DUR	OUTDUR	sum(tInternToExternCalls)	The time associated with workgroup-associated outbound interactions to external destinations
OUT AVG	OUTAVG	sum(tInternToExternCalls) / sum(nInternToExternCalls)	The average time associated with workgroup-associated outbound interactions to external destinations

Interaction Quality Manager Reports

Interaction Quality Manager Reports

The Interaction Quality Manager Reports display detailed information on quality scoring and calibration details. For more information, click a report under **Interaction Quality Manager Reports**.

Calibration Details

The Calibration Details report displays a detailed assessment of the quality of an interaction. The report can be grouped by Scorer or Scored individuals.

The detailed information in the report includes:

- Number of Scorecards
- Average Score
- Highest Score
- Lowest Score
- Median Score
- Score Variance
- Scored User
 - Recording ID
 - Total Count
 - Variance
 - Interaction ID
 - Total Talk
 - Total Hold
 - Wrap-up Code
 - Scorer
 - Total Score
 - Critical Score

- Non-Critical Score
 - Pass/Fail
 - Rank
- Scoring User
 - Scored User
 - Total Recordings
 - Variance
 - Recording ID
 - Total Score
 - Critical Score
 - Non-Critical Score
 - Pass/Fail
 - Rank
 - Interaction ID
 - Total Talk
 - Total Hold
 - Wrap-up Code

Parameters

The following parameters can be specified for the Calibration Details report.

Required Parameters

- Date Time Range
- Directory
- Questionnaire Name

Additional Parameters

- Media Type
- Scoring User
- Workgroup Queue
- Recording ID
- Scored User
- Calibration Only

Group By and Summary Parameters

- Group Report by

Parameter Descriptions

Parameter	Parameter Type	Required/Optional	Description
Date Time Range	Filter	Required	The date and time range bounds
Directory	Filter	Required	Directory where Questionnaire resides
Questionnaire name	Filter	Required	Questionnaire Name to filter by

Calibration Question Group Details Report

The Calibration Question Group Details Report aggregates scores across all the scorecards for a question group and identifies anomalies in the responses.

The detailed information in the report includes:

- Interaction ID Key
- Recording ID
- Questionnaire Name
- Group Name
- Question Type
- Results
- Question Sequence ID
- High Score
- Low Score
- Score Variance
- Number Scored
- Comments

Parameters

The following parameters can be specified for the Calibration Question Group Details Report.

- Recording Date/Time
- Questionnaire Name
- Calibration Only
- Display Graph for Numeric Results
- Display Results as Percents
- Display Scoring Users
- Highlight High Percents
- Highlight Low Percents
- Interaction ID Key
- Media Type
- Recording ID
- Scored User
- Scoring User
- Workgroup Queue

Report Parameters

The following table describes the report parameters available for the Calibration Question Group Details Filter.

Filter Parameters	
Parameter	Description
Recording Date/Time	Configure this parameter to select a Recording Date and Time range for the report filter. In the Recording Date/Time drop-down list, select a value. Available date type values are: Today, Yesterday, This Week, Last Week, This Month, Last Month, This Quarter, Last Quarter, This Year, Last Year, and Custom. If you select Custom , the Date and Time range boxes are available.
Questionnaire Name	Configure this parameter to specify a Questionnaire Name for the report filter. In the Directory field, select a questionnaire directory from the drop-down list. In the Questionnaire name field, select <All> questionnaires, or from the drop-down list select a questionnaire name. To add an additional Questionnaire Name parameter, click Add Parameter .
Calibration Only	Configure this parameter to only select questionnaires used for calibration. In the drop-down list, select Yes to only select questionnaires used for calibration. Select No to select questionnaires <i>not</i> used for calibration.
Display Graph for Numeric Results	Configure this parameter to display numeric report results in a graph. In the drop-down list, select Yes to display numeric report results in a graph. Select No to display numeric report results.
Display results as Percents	Configure this parameter to display numeric report results as percents. In the drop-down list, select Yes to display numeric report results as percents. Select No to display numeric report results as counts.
Display Scoring Users	Configure this parameter to display the name of the scoring user in the report. In the drop-down list, select Yes to display the scoring user's name. Select No to hide the scoring user's name.
Highlight High Percents	Configure this parameter to highlight percents above the

	<p>configured value in green.</p> <p>In the operator field, select an operator from the drop-down list. Available operators are: Equals, Greater than, Greater than or equal to, Is not null, Is null, Less than, Less than or equal to, or Not Equal to.</p> <p>In the next field, specify the numerical value for highlighting percents greater than the entered value, or use the up and down arrows to adjust the value.</p>
Highlight Low Percents	<p>Configure this parameter to highlight percents below the configured value in red.</p> <p>In the operator field, select an operator from the drop-down list. Available operators are: Equals, Greater than, Greater than or equal to, Is not null, Is null, Less than, Less than or equal to, or Not Equal to.</p> <p>In the next field, specify the numerical value for highlighting percents lower than the entered value, or use the up and down arrows to adjust the value.</p>
Interaction ID Key	<p>Configure this parameter to select the Interaction ID Key for the report filter.</p> <p>In the operator field, select an operator from the drop-down list. Available operators are: Contains, Does not contain, Ends with, Equals, Is not null, Is null, Not Equal to, or Starts with.</p> <p>In the next field, enter the Interaction ID Key.</p> <p>To add an additional Interaction ID Key parameter, click Add Parameter.</p>
Media Type	<p>Configure this parameter to specify a Media Type for the report filter.</p> <p>In the operator field, select an operator from the drop-down list. Available operators are: Equals or Not Equal to.</p> <p>In the Media Type field, select a Media Type from the drop-down list. Available types are: Generic, Call, Chat, Email, Fax, Screen, Social Conversation, Social Direct Message, or All.</p> <p>To add an additional Media Type parameter, click Add Parameter.</p>
Recording ID	<p>Configure this parameter to select the Recording ID for the report filter.</p> <p>In the operator field, select an operator from the drop-down list. Available operators are: Contains, Does not contain, Ends with,</p>

	<p>Equals, Is not null, Is null, Not Equal to, or Starts with.</p> <p>In the next field, enter the Recording ID.</p>
Scored User	<p>Configure this parameter to specify a Scored IC User ID for the report filter.</p> <p>In the operator field, select an operator from the drop-down list. Available operators are Equals or Not Equal to.</p> <p>To create a user list, click Select Users, the Select Users dialog is displayed. Use the Search box to search for users by: Site, User ID, Last name, First name, or Workgroup. Click Search to begin the search. The results are displayed in the Results list box. Select the users to add to the user list and click the Add to Selected Users down-arrow button . The names are added to the user list box.</p> <p>To add an additional Scored User parameter, click Add Parameter.</p>
Scoring User	<p>Configure this parameter to specify a Scoring IC User ID for the report filter.</p> <p>In the operator field, select an operator from the drop-down list. Available operators are Equals or Not Equal to.</p> <p>To create a user list, click Select Users, the Select Users dialog is displayed. Use the Search box to search for users by: Site, User ID, Last name, First name, or Workgroup. Click Search to begin the search. The results are displayed in the Results list box. Select the users to add to the user list and click the Add to Selected Users down-arrow button . The names are added to the user list box.</p> <p>To add an additional Scoring User parameter, click Add Parameter.</p>
Workgroup Queue	<p>Configure this parameter to specify a Workgroup Queue for the report filter.</p> <p>In the operator field, select an operator from the drop-down list. Available operators are: Contains, Does not contain, Ends with, Equals, Is not null, Is null, Not Equal to, or Starts with.</p> <p>In the next field, specify a Workgroup Queue for this parameter.</p> <p>To add an additional Workgroup Queue parameter, click Add Parameter.</p>

Calibration Recording Summary

The Calibration Recording Summary report aggregates scores across all the scorecards for a specific questionnaire and identifies anomalies in the responses.

The detailed information in the report includes:

- Questionnaire Directory
- Questionnaire Name
- Questionnaire Notes
- Media Type
- Recorded Date
- Recording ID
- Interaction ID Key
- Initiation Policy
- Recording Length
- Direction
- Number of Scorecards of Questionnaire
- Average Score of Questionnaire
- Median Score of Questionnaire
- Highest Score of Questionnaire
- Lowest Score of Questionnaire
- Score Variance of Questionnaire
- Number of Scorecards by user for Group
- Highest Score by user for Group
- Average Score by user for Group
- Lowest Score by user for Group
- Median Score by user for Group
- Score Variance by user for Group

Parameters

The following parameters can be specified for the Calibration Recording Summary report.

Required Parameters

- Date Time Range
- Directory
- Questionnaire Name

Additional Parameters

- Interaction ID Key
- Media Type
- Recording ID
- Scored User
- Scoring User
- Workgroup Queue

Parameter Descriptions

Parameter	Parameter Type	Required/Optional	Description
Date Time Range	Filter	Required	The date and time range bounds
Directory	Filter	Required	Directory where Questionnaire resides
Questionnaire name	Filter	Required	Questionnaire Name to filter by
Interaction ID Key	Filter	Optional	Interaction ID Key to filter by
Media Type	Filter	Optional	Media type to filter by: Generic, Call, Chat, Email, Fax, Screen, Social Conversation, Social Direct Message, or <All>
Recording ID	Filter	Optional	Recording ID to filter by
Scored User	Filter	Optional	Scored User to filter by

Scoring User	Filter	Optional	Scoring user to filter by
Workgroup Queue	Filter	Optional	Workgroup queue to filter by

Deleted Recording Audit by Date Report

The Deleted Recording Audit by Date report is an Interaction Recorder report that displays deleted recordings by Date and Time the Recording was deleted, and then by User ID.

Parameters

Specify a Date and Time range, and enter a user, list of users, or range of users to report on by User ID. IC sorts this report by Date, and displays the Date and Time, IC UserID, Recording ID, and Comments.

Report Log Tables

DeletedRecordings

Recorder Questionnaire Detail Report

This report provides detailed information about each questionnaire included in the range. It enables supervisors and managers to analyze all of the questions, score ranges, types of questions, weights and other possible values available in a questionnaire. Since the Questionnaire Builder application does not provide a way to view all of these details on one page, this report provides the best way to analyze all of the questionnaire information in a consolidated format.

Parameters

Specify a range of questionnaire names and Users to include in the report. IC sorts this report by questionnaire name.

Report Log Tables

Report Element

Name

Questionnaire Min Score

Field or Value Description

The name of a questionnaire included in the "Questionnaire Range or List" parameter. These are predefined in the IR Questionnaire Builder, accessible in Interaction Administrator.

The overall minimum score possible in this questionnaire. The Min score is defined in the questionnaire builder and it applies to questions scored

	with Integer, Numeric, True/False, and Multiple Choice types of questions.
Questionnaire Max Score	The overall maximum score possible in this questionnaire. The Max score is defined in the questionnaire builder and it applies to questions scored with Integer, Numeric, True/False, and Multiple Choice types of questions.
Question Group	The title given to a group of logically related questions assigned in the Questionnaire Builder while the questionnaire is being created.
Question Text	A specific question used by a supervisor to evaluate an agent's performance during the recording.
Question Type	Questions can have an answer of True/False, an integer, a number, multiple choice or free text.
Answer Score	The weight given to this answer.
Average Score	The Average Score is displayed for each questionnaire at the end of the report.

Record Selection Criteria:

{VW_ScoringSummary.QuestionnaireName} in {?Questionnaire} and

{VW_ScoringSummary.QGroupName} in {?User}

Recorder Scoring Summary Report

This report summarizes the questionnaire scores for each Interaction Recorder questionnaire in the specified range. It lists a summary line for each scored recording under each questionnaire name included in the report. Recordings that have not been scored will not appear in the list. The summary line provides an overview of how an agent performed on each recorded, scored interaction in the range.

Parameters

Specify a range of dates/times, users, and questionnaire names to include in the report. IC sorts this report by questionnaire name. Note that the date/time range refers to the date/time the original recording was made, not the date/time that the recording was scored (graded) by the reviewer.

Report Element

Field or Value Description

Name

The name of a questionnaire included in the "Questionnaire Range or List" parameter. These are predefined in the IR Questionnaire Builder, accessible in Interaction Administrator.

Questionnaire Min Score

The overall minimum score possible in this questionnaire. The Min score is defined in the questionnaire builder and it applies to questions scored with Integer, Numeric, True/False, and Multiple Choice types of questions.

Questionnaire Max Score

The overall maximum score possible in this questionnaire. The Max score is defined in the questionnaire builder and it applies to questions scored with Integer, Numeric, True/False, and Multiple Choice types of questions.

IC User

The IC user name as defined in Interaction Administrator

Title

The title given to the recording by Interaction Recorder

Recording Date

The date and time of the original recording.

Media

Indicates the type of interaction. This could be CALL, CHAT, EMAIL, or FAX

Score

The final score given to a recording.

Percentile

The final percentile of the scored recording. This is the Score divided by the Questionnaire Max Score.

Rank

If a rank order is specified, the percentile is matched with the ranges in the rank order and the corresponding rank title is shown.

Average Score

The Average Score is displayed for each questionnaire at the end of the report.

Record Selection Criteria:

{VW_ScoringSummary.QUESTIONNAIRENAME} in {?Questionnaire} and

{VW_ScoringSummary.ICUSERID} in {?User} and

{VW_ScoringSummary.RECORDINGDATE} in {?DateTime}

Recorder User Scoring Summary Report

This report summarizes the questionnaire scores for each IC user and Interaction Recorder questionnaire in the specified range. It lists a summary line for each scored recording under each user name included in the report. Recordings that have not been scored will not appear in the list. The summary line provides an overview of how an agent performed on each recorded, scored interaction in the range.

Parameters

Specify a range of dates/times, users, and questionnaire names to include in the report. IC sorts this report by user name and then by questionnaire name under each user. **Note** that the date/time range refers to the date/time the original recording was made, not the date/time that the recording was scored (graded) by the reviewer.

Report Log Tables

ScoringSummary

Interaction Administrator Unique Report Identifier

RECORDER_USER_SCORING_SUMMARY

The screenshot shows a 'Sample Report' from GENESYS. It contains a table with the following columns: Agency, Questionnaire, Min Score, Max Score, # of Recordings, % of Recordings, # of Scored, % of Scored, # of Not Scored, and % of Not Scored. The table lists several rows for different agencies and questionnaires, all showing 100% of recordings scored.

Agency	Questionnaire	Min Score	Max Score	# of Recordings	% of Recordings	# of Scored	% of Scored	# of Not Scored	% of Not Scored
Agency A	Questionnaire A	100	100	100	100%	100	100%	0	0%
Agency B	Questionnaire B	100	100	100	100%	100	100%	0	0%
Agency C	Questionnaire C	100	100	100	100%	100	100%	0	0%

Name

Title

Field or Value Description

The IC user name as defined in Interaction Administrator

The overall minimum score possible in this questionnaire. The Min score is defined in the questionnaire builder and it applies to questions scored with Integer, Numeric, True/False, and Multiple Choice types of questions.

The overall maximum score possible in this questionnaire. The Max score is defined in the questionnaire builder and it applies to questions scored with Integer, Numeric, True/False, and Multiple Choice types of questions.

The name of a questionnaire included in the "Questionnaire Range or List" parameter. These are predefined in the IR Questionnaire Builder, accessible in Interaction Administrator.

The title given to the recording by Interaction Recorder

Recording Date	The date and time of the original recording.
Media	Indicates the type of interaction. This could be CALL, CHAT, EMAIL, or FAX
Score	The final score given to a recording.
Percentile	The final percentile of the scored recording. This is the Score divided by the Questionnaire Max Score.
Rank	If a rank order is specified, the percentile is matched with the ranges in the rank order and the corresponding rank title is shown.
Average Score	The Average Score is displayed for each questionnaire at the end of the report.

Record Selection Criteria:

{VW_ScoringSummary.QUESTIONNAIRENAME} in {?Questionnaire} and

{VW_ScoringSummary.ICUSERID} in {?User} and

{VW_ScoringSummary.RECORDINGDATE} in {?DateTime}

Quality Scoring Details

The Quality Scoring Details report displays detailed information on quality scoring, grouped by recording and then by Questionnaire. The report shows: if a Questionnaire was marked for Calibration; if there were critical questions, and their scores; and if questions were marked N/A during scoring. The report also displays comments attached to questions during the scoring process. The detailed information in the report includes:

- Recording Date
- Media
- Questionnaire Name
- Passed/Failed results
- Recorded User ID
- Form Score
- Percentile
- Rank
- Scored User ID
- Question Group
- Importance
- Question Text
- Question Answer
- N/A indicator
- Score: Min., Max., Answer

Parameters

The following parameters can be specified for the Quality Scoring Details report:

- Date Time Range
- Questionnaire Name
- Recorded IC User
- Scored User

Parameter Descriptions

Parameter	Parameter Type	Required/Optional	Description
Date Time Range	Filter	Required	The date and time range bounds
Questionnaire Name	Filter	Optional	The Questionnaire Name to filter by
Recorded IC User	Filter	Optional	The Recorded IC User to filter by
Scored User	Filter	Optional	The Scored User to filter by

Tracker Organization Summary Report

This report displays an organization summary.

Parameters

This report contains 10 reporting parameters, such as Organization, type, street address, city, state, zip, country, and iAddress.

Click the image below to display TRACKER_ORG_SUMMARY a sample report.

Sample report

Click on the image below to view a sample of this report.

The screenshot shows a 'Sample Report' header with the Genesys logo. Below the header is a table with the following columns: Agency, Location, Agency Population, Max. Pool, Allocation, Allocation %, Total Calls, Agency Calls, Agency Calls %, Agency Calls %, Agency Calls %, Agency Calls %. The table contains 10 rows of data, including a 'Total' row at the bottom.

Agency	Location	Agency Population	Max. Pool	Allocation	Allocation %	Total Calls	Agency Calls	Agency Calls %	Agency Calls %	Agency Calls %
Agency 1	Location 1	100,000	100,000	100,000	100%	100	100	100%	100%	100%

User Reports**User Reports**

User Reports display detailed data for fax interactions and information about users. For more information on specific User Reports, click on a report name under **User Reports**.

Fax Detail Report

The Fax Detail Report displays detailed data for fax interactions for the specified date and period of time. This report includes:

- Processing Date and time
- Fax Direction
- Envelope
- Fax ID
- Remote Number
- Remote CSId
- Duration of the fax transmission
- Number of Pages in the fax transmission

- Transmission Speed for the fax

The report also displays information on the Total Inbound and Total Outbound fax transmissions including:

- Succeeded fax transmissions
- Failed fax transmissions
- Total fax transmissions
- Duration of fax transmissions
- Average duration of fax transmissions

Parameters

The following parameters can be specified for the Fax Detail report:

- Date
- Remote number
- Sender name

Fax Summary Report

The Fax Summary report displays a summarized view of statistics for each user on the Total Inbound and Total Outbound fax transmissions within the specified period of time. The report statistics include:

- Number of Succeeded fax transmissions
- Number of Failed fax transmissions
- Total number of fax transmissions
- Total Duration of fax transmissions
- Average duration of fax transmissions

Parameters

The following parameters can be specified for the Fax Summary report:

- Date
- Remote number
- Sender name

Sample report

Fax Envelope Detail Report

The Fax Envelope Detail report shows all detailed activity of a specified envelope ID, including direction, time, remote number, fax ID, envelope ID, and call ID.

Note

The information in the call ID field can be linked with the call detail table to see more information on the calls.

Parameters

You specify a range of dates, times, shifts, site IDs, and envelope IDs to include in the report. The success flag parameter is a discrete value that you set to determine what type of fax information will be displayed on the report. By default, this parameter is set to "S" for successes, but you can also enter "F" for failure.

IC sorts this report by envelope information, and then by date time in ascending order.

Sample Report

GENESYS

Group	Site ID	Envelope ID	Direction	Remote Number	Call ID Key	Failure Type	Processing Date Time	Time
Group	SiteID	EnvelopeID	Direction	RemoteNumber	CallIDKey	FailureType	ProcessingDateTime	Time

Report Element

Report Field or Value

Field or Value Description

Site ID

SiteID

The name of the Site ID as specified in the range.

Date

ProcessingDateTime

The date for each date included in the date range selected for this report. The date can be displayed as hour, day, week or month.

Time

ProcessingDateTime

The time of day that the failure occurred in the system.

Envelope ID

EnvelopeID

The fax envelope ID for each addressee on the fax. One fax can have multiple envelope ids. Duplicate envelope ids will appear on this report, due to the retries.

Direction

Direction

The direction of the fax, either Incoming or Outgoing.

Remote Number

RemoteNumber

The remote or non-IC number. This will be the number dialed for outgoing faxes or the number of the incoming fax machine. It is possible for the remote number field to contain no number, if the remote number can not be determined.

Fax ID

FaxID

The fax identification number for the selected faxes.

Failure Type

FailureType

The reason the fax failed to transmit.

Call ID Key

CallIDKey

The call ID number for this fax attempt. This number should match a corresponding call ID number in the call detail record.

The format and use of this field is reserved, and it should not be used as anything more than an opaque identifier. The format of this field might

be changed at any time. This field is documented for descriptive purposes only.

Success/Failure

SuccessFlag

The indicator as to whether the fax transmitted successfully or not. Success and Failure are the value of this field.

Record Selection Criteria:

{FaxEnvelopeHist.ProcessingDateTime} in {?DateTime} and

{FaxEnvelopeHist.SiteId} in {?SiteId} and

{@StatusTime} IN {?ShiftTime} and

{{FaxEnvelopeHist.EnvelopeID} = {?EnvelopeID} or {FaxEnvelopeHist.FaxID} = {?FaxID}}

Formulas:

All times are expressed as hh:mm:ss. This formula is used throughout the report to convert seconds to hh:mm:ss. This formula is external to the report file.

Fax Failure Detail Report

The Fax Failure Detail report shows detail of the fax failure activity by date, direction, and envelope ID, with status being defined as failed transmission. This report is limited to failure information, since fax failures may have issues that need to be addressed.

Parameters

You specify a range of dates, times, shifts, and site IDs to include in the report. IC sorts this report by date time, and then by envelope information in ascending order.

000000000	000000000	000000000	000000000	000000000	000000000	000000000	000000000	000000000	000000000	000000000	000000000

Report Element

Report Field or Value

Field or Value Description

Site ID	SiteID	The name of the Site ID as specified in the range.
Date	ProcessingDateTime	The date for each date included in the date range selected for this report. The date can be displayed as hour, day, week or month.
Time	ProcessingDateTime or Max(ProcessingDateTime)	The time of day that the failure occurred in the system.
Envelope ID	EnvelopeID	The fax envelope ID for each addressee on the fax. One fax can have multiple envelope ids. Duplicate envelope ids will appear on this report, due to the retries.
Direction	Direction	The direction of the fax, either Incoming or Outgoing.
Remote Number	RemoteNumber	The remote or non-IC number. This will be the number dialed for outgoing faxes or the number of the incoming fax machine. It is possible for the remote number field to contain no number, if the remote number can not be determined.
Failure Attempt	FailureAttempts or Max(FailureAttempts)	The number of the attempt that failed. A fax has truly failed to transmit if the Failure Attempts are greater than the number of retries allowed.
Failure Type	FailureType	The reason the fax failed to transmit.
Retries	Retries	The number of retries the fax server will attempt before a fax has completely failed to transmit.
To Name	ToName	The intended recipient of the fax. This information is derived from the fax cover page and will be blank on incoming faxes.

Record Selection Criteria:

{FaxEnvelopeHist.ProcessingDateTime} in {?DateTime} and
 {FaxEnvelopeHist.SiteId} in {?SiteId} and
 {@StatusTime} IN {?ShiftTime}
 {FaxEnvelopeHist.SuccessFlag} = "F"

Formulas:

All times are expressed as hh:mm:ss. This formula is used throughout the report to convert seconds to hh:mm:ss. This formula is external to the report file.

Fax Failure Summary Report

The Fax Failure Summary report shows a summary of the fax failure activity for each envelope ID. This report displays the last failure for each envelope ID, and is limited to failure information, since fax failures may have issues that need to be addressed.

Parameters

You specify a range of dates, times, shifts, and site IDs to include in the report. IC sorts this report by date time, and then by envelope information in ascending order.

Failure Type	FailureType	The reason the fax failed to transmit.
Retries	Retries	The number of retries the fax server will attempt before a fax has completely failed to transmit.
To Name	ToName	The intended recipient of the fax. This information is derived from the fax cover page and will be blank on incoming faxes.

Record Selection Criteria:

{FaxEnvelopeHist.ProcessingDateTime} in {?DateTime} and

{FaxEnvelopeHist.SiteId} in {?SiteId} and

{@StatusTime} IN {?ShiftTime}

{FaxEnvelopeHist.SuccessFlag} = "F"

Formulas:

All times are expressed as hh:mm:ss. This formula is used throughout the report to convert seconds to hh:mm:ss. This formula is external to the report file.

The Time field and the Failure Attempts field should display the maximum value in the table that meet the other criteria.

User Performance Summary Report

The User Performance Summary report analyzes users and agents and their interaction activity. The report displays both ACD and non-ACD summary information for a user. The report template provides flexible column placeholders to display statistics such as Transferred, ACD LoggedIn, DND, and Occupancy, and the template also provides flexibility to order report groups based on User, Queue, and Media Type.

The User Performance Summary report displays detailed agent statistics, including:

- The number of interactions offered
- The number or percentage of interactions answered
- The number or percentage of flow outs
- The average duration for talk time
- The average duration for hold time
- The average duration for ACW
- The average duration for handle time
- The number of Non-ACD inbound interactions
- The average duration of Non-ACD inbound interactions
- The number of Non-ACD outbound interactions
- The average duration of Non-ACD outbound interactions
- The number or percentage of transfers
- The duration of DND
- The number or percentage of holds
- The number or percentage of local disconnects

Parameters

The following parameters can be specified in Interaction Reporter for the User Performance Summary report:

- Date/Time Range
- Media Type
- Site ID
- User List

The following additional parameters can be configured for this report template in Report Management:

- Flexible Column1
- Flexible Column2
- Flexible Column3
- Flexible Column4
- Discrete or Percentage
- Avg Hold Calculation
- Group 1 (default is User)
- Group 2 (default is Queue)
- Group 3 (default is Media Type)

User Call Detail

The Crystal User Call Detail report displays per Agent, per day, information on interactions such as: Initiated and connected date/time, media type, direction, interaction type, remote number, remote name, interaction duration, hold time and account code.

Parameters

The following parameters can be specified for the User Call Detail report:

- Date/Time Connected (required parameter)
- Date/time Initiated
- Account Code
- Call Direction
- Call Duration
- Call Type
- Hold Time
- Caller ID
- Media Type
- Remote Name
- Remote Number
- Site ID
- User
- User List

Note This Crystal version does not have formatting parameters, which are available in the ActiveReport version.

Parameter Descriptions

Parameter	Parameter Type	Required/Optional	Description
Date/Time Connected	Filter	Required	The interaction connected date and time range bounds to filter by
Date/Time Initiated	Filter	Optional	The interaction initiated date and time range bounds to filter by
Account Code	Filter	Optional	The account code to filter by
Call Direction	Filter	Optional	The direction of the call to filter by
Call Duration	Filter	Optional	The duration of the call to filter by
Call Type	Filter	Optional	The call type to filter by
Hold Time	Filter	Optional	The hold time to filter by
Caller ID	Filter	Optional	The caller ID to filter by
Media Type	Filter	Optional	The interaction media type to filter by: Call, Callback, Chat, Generic Object, Email, Fax, Instant Question, Monitor Object, SMS, Social Conversation,

			Social Direct Message, Unknown, and Work item
Remote Name	Filter	Optional	The remote name to filter by
Remote Number	Filter	Optional	The remote number to filter by
Site ID	Filter	Optional	The Site ID to filter by
User	Filter	Optional	The user to filter by
User List	Filter	Optional	The list of users to filter by

Report Element Descriptions

Please reference the CIC Data Dictionary Technical Reference under CallDetail_viw View for further technical details and column definitions.

Report Element	Database Column or Computation	Details
Initiated	ConvertUTCTimeToLocalTime(InitiatedDateTimeGmt)	The datetime the interaction was initiated
Connected	ConvertUTCTimeToLocalTime(ConnectedDateTimeGmt)	The datetime the interaction was connected
Media	LookupInteractionType(InteractionType)	The media type of the interaction
Direction	LookupCallDirectionDescription (CallDirection)	The interaction direction
Type	LookupCallTypeDescription (CallType)	The originator of the interaction

		(external/intercom/unknown)
Remote number	RemoteNumberFmt	The remote number (when available)
Remote name	RemoteName	The remote name (when available)
Duration	CallDurationSeconds	The duration of the interaction
Hold time	HoldDurationSeconds	The duration of all hold time for the interaction
Account code	AccountCode	The account assigned on the interaction (when available)

User Call Summary

The Crystal User Call Summary report displays per Agent, summarized data such as: Number, duration and average duration of interactions. Also for Inbound and Outbound interactions, displays the number, duration, average duration and call type (External or Intercom). This is presented on a tabular way for each day on the selected date time range of the report. In addition, the report shows a comparative chart of percentages of Interaction Directions within the period of time for the user.

Parameters

The following parameters can be specified for the User Call Summary report:

- Date/Time Connected (required parameter)

- Date/time Initiated
- Account Code
- Call Direction
- Call Duration
- Call Type
- Hold Time
- Caller ID
- Media Type
- Remote Name
- Remote Number
- Site ID
- User
- User List

Note This Crystal version does not have formatting parameters, which are available in the ActiveReport version.

Parameter Descriptions

Parameter	Parameter Type	Required/Optional	Description
Date/Time Connected	Filter	Required	The interaction connected date and time range bounds to filter by
Date/Time Initiated	Filter	Optional	The interaction initiated date and time range bounds to filter by
Account Code	Filter	Optional	The account code to filter by
Call Direction	Filter	Optional	The direction of the call to filter by
Call Duration	Filter	Optional	The duration of the call to filter by
Call Type	Filter	Optional	Filter calls by external, intercom, or unknown type of calls
Hold Time	Filter	Optional	The hold time to filter by
Caller ID	Filter	Optional	The caller ID to filter by
Media Type	Filter	Optional	Configure this parameter to specify a Media Type for the report filter. In the operator field, select an operator

			<p>from the drop-down list. Available operators are: Equals or Not Equal to.</p> <p>In the Media Type field, select a Media Type from the drop-down list. Available types are: Call, Callback, Chat, Generic Object, Email, Fax, Instant Question, Monitor Object, SMS, Social Conversation, Social Direct Message, Unknown, or Work item.</p> <p>To add an additional Media Type parameter, click Add Parameter.</p>
Remote Name	Filter	Optional	The remote name to filter by
Remote Number	Filter	Optional	The remote number to filter by
Site ID	Filter	Optional	The Site ID to filter by
User	Filter	Optional	The user to filter by
User List	Filter	Optional	The list of users to filter by

Sample report

Report Element Descriptions

Please reference the CIC Data Dictionary Technical Reference under CallDetail_viw View for further technical details and column definitions.

Report Element	Database Column or Computation	Details
Count	count(CallID)	The number of interactions

Duration	sum(CallDurationSeconds)	The total duration of interactions
Avg	sum(CallDurationSeconds) / count(CallID)	The average duration of interactions
Inbound Count	sum(CountInbound)	The number of inbound interactions
Inbound Duration	sum(DurationInbound)	The total duration of inbound interactions
Inbound Avg	sum(DurationInbound) / sum(CountInbound)	sum(DurationInbound) / sum(CountInbound)
Inbound External	sum(CountInboundExternal)	The number of inbound, external interactions
Inbound Intercom	sum(CountInboundIntercom)	The number of inbound, intercom interactions
Outbound Count	sum(CountOutbound)	The number of outbound interactions
Outbound Duration	sum(DurationOutbound)	The duration of outbound interactions
Outbound Avg	sum(DurationOutbound) / sum(CountOutbound)	The average duration of outbound interactions
Outbound External	sum(OutboundExternal)	The number of outbound external interactions
Outbound Intercom	sum(OutboundIntercom)	The number of outbound intercom interactions

User Availability

The User Availability report combines the legacy User Availability Summary and User Availability Detail reports into one report. The layout has changed slightly to accommodate the graphs and charts from both reports.

The User Availability report displays per user:

- A pie chart representing a summary of ACD vs Non-ACD durations on the datetime period of the report
- A comparative chart of the summary of time on each of the following status groups: Available, Break, Follow Up, Unavailable and Training
- A table with the following activity data per day: first Logged in time of the day; total Logged in duration; total Non ACD duration; total DND duration; total ACW duration; total duration on available status; duration on break status; duration on follow up status; duration on unavailable status; and duration on training status
- The users' daily availability detail is suppressed by default. The user can display the detail by double clicking the corresponding Date Field. When selected, a new tab is opened displaying two tables. The first one is a summary table with grouped status keys, including the duration of each status key and the frequency of these status keys. The second table gives detailed information on the changes of states per day within the date time range

Parameters

The following parameters can be specified for the User Availability report:

- DateTime (Required Parameter)
- User List
- User
- Last Name
- After Call work
- ACD Logged In
- Department
- Duration
- Do Not Disturb
- Logged In
- Job Title
- Status
- Site ID
- Company

Parameter Descriptions

Report Element Descriptions

Please reference the CIC Data Dictionary Technical Reference under Agent Activity Table for further technical details and column definitions.

Report Element	Database Column or Computation	Details
Date	date(ININ_ConvertUTCTimeToLocalTime(StatusDateTimeGMT))	The date associated with the status event
Status Time	time(ININ_ConvertUTCTimeToLocalTime(StatusDateTimeGMT))	The time associated with the status event
Status	ININTranslateStatusKey(StatusKey)	The localized status key. In order for a status key to be localized, it must exist in the CIC status messages configuration
Duration	StateDuration	The status duration
Status Group	ININTranslateStatusKey(StatusGroup)	The localized status group. In order for a status group to be localized, it must exist in the CIC status messages configuration
Logged In	sum(StateDuration) where LoggedIn = 1	Logged in status duration
Non ACD	sum(StateDuration) where AcdLoggedIn = 0	Non-ACD status duration (Status allows ACD Calls = false)
DND	sum(StateDuration) where StatusDnd = 1	Do not disturb (DND) status

		duration (Status is Do Not Disturb = true)
ACW	sum(StateDuration) where StatusAcw = 1	After call work (ACW) status duration (Status is ACW = true)
Available	sum(StateDuration) where StatusGroup = Available	AVAILABLE status group duration
Break	sum(StateDuration) where StatusGroup = Break	BREAK status group duration
Follow up	sum(StateDuration) where StatusGroup = Followup	FOLLOWUP status group duration
Unavailable	sum(StateDuration) where StatusGroup = Unavailable	UNAVAILABLE status group duration
Training	sum(StateDuration) where StatusGroup = Training	TRAINING status group duration

User Productivity

The User Productivity report displays user and team data grouped dynamically by User, Queue, DNIS, Media Type, or Interval in any runtime specified grouping order. The report displays counts and percentages of interactions Offered, Answered and Abandoned, Flow Outs, and Transfers. Also provided

are the durations and averages of Talk, Hold, ACW and Handle times as well as counts and averages for inbound and outbound Non-ACD calls.

Note

This report, while similar in format and columns available, differs from the Queue Summary and Detail report in that the metrics are calculated using agent level data rather than workgroup level data. It is inaccurate to compare or equate the Queue and User reports with one another. For example, an Offered interaction in the User Productivity report will display the number of calls that were offered to a specific user, while as an Offered interaction in the Queue Summary and Detail report will show the number of calls that were presented to a specific workgroup queue (prior to being presented to an agent).

Please reference Interval Queue Data in latest CIC Data Dictionary Technical Reference located in the online help for further explanation on how interval queue data is formulated.

Parameters

The following parameters can be specified for the User Productivity report:

Required Parameters

- Date Time Range
- Media Type

Group by and Summary Parameters

- Group Order: User (Default Grouping); Queue; Media Type; Interval: DNIS (Report Group
- Interval Config

Additional parameters

- Site ID
- Queue
- User List
- User
- DNIS (Report Group)

Parameter Descriptions

Parameter	Parameter Type	Required/Optional	Description
-----------	----------------	-------------------	-------------

Date/Time Range	Filter	Required	The date and time range bounds
Media Type	Filter	Required	<p>Configure this parameter to specify a Media Type for the report filter.</p> <p>In the operator field, select an operator from the drop-down list. Available operators are: Equals or Not Equal to.</p> <p>In the Media Type field, select a Media Type from the drop-down list. Available types are: <All>, Call, Callback, Chat, Email, Fax, Generic Object, Instant Question, SMS, Unknown, Work item, Social Conversation, or Social Direct Message.</p> <p>To add an additional Media Type parameter, click Add Parameter.</p>
Group Order	Format/Informational	Required	Allows grouping of the report data. Choose one or more from User, Queue, Media Type, Interval, or DNIS/Report Group
Interval Config	Format/Informational	Required	The interval for which the report is grouped by. Choose from Half Hour, Hour, Day of Week, Daily, Weekly, Monthly, Quarterly or Yearly
Site ID	Filter	Optional	The Site ID to filter by
Queue	Filter	Optional	The workgroup queue to filter by
User List	Filter	Optional	The list of users to filter by
User	Filter	Optional	The user to filter by
DNIS(Report Group)	Filter	Optional	The DNIS/Report Group to filter by

Report Element Descriptions

Please reference the CIC Data Dictionary Technical Reference under Agent Queue Period Statistics Interval View for further technical details and column definitions.

Report Element	Database Column or Computation	Details
User	cName	The user
Queue	cReportGroup	The workgroup queue
Report Group	cHKey3	The DNIS/report group
Media Type	cHKey4	The media type
Offered	sum(nEnteredAcid)	The number of ACD interactions that were offered (entered)
Answered #	sum(nAnsweredAcid)	The number of ACD interactions that were answered
Answered %	$\text{sum}(n\text{AnsweredAcid}) / \text{sum}(n\text{EnteredAcid}) * 100$	The percent of ACD interactions that were answered
Abandoned #	sum(nAbandonedAcid)	The number of ACD interactions that were abandoned
Abandoned %	$\text{sum}(n\text{AbandonedAcid}) / \text{sum}(n\text{EnteredAcid}) * 100$	The percent of ACD interactions that were abandoned
Flow Outs #	sum(nFlowoutAcid)	The number of ACD interactions that flowed out
Flow Outs %	$\text{sum}(n\text{FlowoutAcid}) / \text{sum}(n\text{EnteredAcid}) * 100$	The percent of ACD interactions that flowed out

Transferred #	$\text{sum}(n\text{TransferredAcid})$	The number of ACD interactions transferred (calls only, destination must be a user/workgroup queue)
Transferred %	$\text{sum}(n\text{TransferredAcid}) / \text{sum}(n\text{EnteredAcid}) * 100$	The percent of ACD interactions transferred (calls only, destination must be a user/workgroup queue)
Talk Time Duration	$\text{sum}(t\text{TalkAcid}) - \text{sum}(t\text{HoldAcid})$	The talk time associated with ACD interactions
Talk Time Average	$(\text{sum}(t\text{TalkAcid}) - \text{sum}(t\text{HoldAcid})) / \text{sum}(n\text{AnsweredAcid})$	The average talk time of ACD interactions
Hold Time Duration	$\text{sum}(t\text{HoldAcid})$	The held time associated ACD interactions
Hold Time Average	$\text{sum}(t\text{HoldAcid}) / \text{sum}(n\text{AnsweredAcid})$	The average hold time for ACD interactions
ACW Time Duration	$\text{sum}(t\text{Acw})$	The after call work (ACW) time
ACW Time Average	$\text{sum}(t\text{Acw}) / \text{sum}(n\text{AnsweredAcid})$	The average after call work (ACW) time for ACD interactions
Handle Time Duration	$\text{sum}(t\text{TalkAcid}) + \text{sum}(t\text{Acw})$	The handle time for ACD interactions
Handle Time Average	$(\text{sum}(t\text{TalkAcid}) + \text{sum}(t\text{Acw})) / \text{sum}(n\text{AnsweredAcid})$	The average handle time for ACD interactions
Non-ACD IN #	$\text{sum}(n\text{ExternToInternCalls}) - \text{sum}(n\text{ExternToInternAcidCalls})$	The number of non-ACD, workgroup-associated inbound interactions from external locations
Non-ACD IN AVG	$(\text{sum}(t\text{ExternToInternCalls}) - \text{sum}(t\text{ExternToInternAcidCalls})) / (\text{sum}(n\text{ExternToInternCalls}) - \text{sum}(n\text{ExternToInternAcidCalls}))$	The time associated with non-ACD, workgroup-associated inbound interactions from external locations
Non-ACD OUT #	$\text{sum}(n\text{InternToExternCalls}) - \text{sum}(n\text{InternToExternAcidCalls})$	The number of non-ACD, workgroup-associated outbound interactions to external destinations
Non-ACD OUT AVG	$(\text{sum}(t\text{InternToExternCalls}) - \text{sum}(t\text{InternToExternAcidCalls})) / (\text{sum}(n\text{InternToExternCalls}) - \text{sum}(n\text{InternToExternAcidCalls}))$	The time associated with non-ACD, workgroup-associated outbound interactions to external destinations.

Wrap Up Codes

Wrap Up Codes

The Wrap Up Codes Report displays statistics for completed interactions summarized by group. For more information, click on the Wrap Up Codes report name, under **Wrap Up Codes Report**.

Wrap Up Codes

The Wrap Up Codes Report displays statistics for completed interactions, summarized by group, including: Wrap-up code, Queue, User, or Date. The flexibility in creating this report allows the User to display the groups in any order or not include a group in the report. The report also allows the User to choose to display interaction details. The statistics displayed in this report include:

- Wrap-up code
- Queue
- User
- Date
- Wrap-up Time
- Total Interactions
- Total Duration
- Average Duration
- Number of Outbound Interactions
- Outbound Duration
- Average Outbound Duration
- Number of Inbound Interactions
- Inbound Duration
- Average Inbound Duration
- Optional Interaction Details

Parameters

The following parameters can be specified for the Wrap Up Codes report:

- Date Range
- Queue
- UserID
- WrapUp Code
- Display Interaction Detail
- Group Selection and Order

Parameter Descriptions

Parameter	Parameter Type	Required/Optional	Description
Date Time Range	Filter	Required	The date and time range bounds
Queue	Filter	Optional	The queue to filter by
UserID	Filter	Optional	The User ID to filter by
WrapUp Code	Filter	Optional	The Wrap-up code to filter by
Group Order	Format/Informational	Optional	Select the groups to be displayed in the report.
Display Interaction Detail	Format/Informational	Optional	This parameter allows you to display interaction details. Select Yes to show the details in the report.

Sample report

Report Element Descriptions

Report Element	Database Column or Computation	Details
WrapUpCode	InteractionWrapup.WrapupCode	Wrap-up code is displayed in the report as the group name
Queue	InteractionWrapup.WorkgroupID	Work group ID is displayed in the report as the group name.
User	InteractionWrapup.icuserid	User name is displayed in the reports as the group name
Date	InteractionWrapup.WrapupStartDateTimeUTC	Date is displayed in the report as the group text
Interaction ID	InteractionWrapup.SourceInteractionIDKey	Displays the Interaction ID in the report
Wrap-Up Time	InteractionWrapup.WrapupStartDateTimeUTC	Displays the time of the wrap up
Total Interactions	Count of InteractionWrapup.WrapupCode	Displays the number of wrap up code records for Wrap Up Code/Work group ID/User/Date
Total Duration	Sum of InteractionWrapup.tConnected	Displays the sum of total duration of wrap up codes for a particular group. For the details section, it is the duration of the wrap up. All calculations are in seconds.
Avg. Duration	Average duration = (Total Duration / Total Interactions)	Average duration. This field is not shown in detail section.
Outbound Interactions	Count of InteractionWrapup.WrapupCode where InteractionSummary.Direction = 2	Displays the number of outbound wrap-up code records when the interaction summary direction is outbound
Avg. Out Duration	Average out duration = (Total out Duration / Total Interactions) where InteractionSummary.Direction = 2	Displays the average duration of wrap-up code records when the interaction summary direction is outbound. This field is not shown in

		the detail section.
Inbound Interactions	Count of InteractionWrapup.WrapupCode where InteractionSummary.Direction = 1	Displays the number of inbound wrap-up code records when the interaction summary direction is inbound
Inbound Duration	Sum of InteractionWrapup.tConnected where InteractionSummary.Direction = 1	Displays the sum of total duration of inbound wrap-up codes for a particular group. For details section, it is the duration of the wrap up. All calculations are in seconds.
Avg. In Duration	Average in duration = (Total in Duration / Total Interactions) where InteractionSummary.Direction = 1	Displays the average duration of wrap-up code records when the interaction summary direction is inbound. This field is not shown in the detail section.

Account Code - Supervisor

Account Code - Supervisor

The Account Code - Supervisor reports display information on call detail and summary, by date and user. For more information, click a report under **Account Code - Supervisor**.

Account Code Call Detail by Date Report

The Account Codes Call Detail by Date Report displays interactions (calls and chats only) and the account code information for one or more users for a given time period. The report is designed to help a supervisor determine which account codes were used on a particular day, and to review the information

regarding their interactions for a specific date range. Supervisors may use account codes for billing purposes for long distance calls, for example.

Note

This report will not include interactions that were not assigned an account code. Currently, there is no way to query a range of account codes for a record that has a null value for account code. If you want to report on interactions that have no account code assigned, see the User Call Detail report.

Parameters

You specify a range of dates, times, users, site IDs, and account codes to include in the report. IC sorts this report by account code, user and then by date in ascending order.

The screenshot shows a 'Sample Report' header with the Genesys logo. Below the header is a table with the following columns: Account Code, User, Date, Time, Call Count, Call Duration, and % of Total. The table contains several rows of data, including a summary row for 'Total' and multiple rows for different account codes and users.

Report Element

Report Field or Value

Field or Value Description

Account Code

AccountCode

The name of the selected account code. This displays the number as well as the account code name.

User

LocalUserId

The name of the IC user included in the specified range.

Extension

LocalNumber

The extension of the IC user.

Date

ConnectedDate

The date for each day included in the date range for this the report.

Time

ConnectedTime

The time each connected interaction was placed or received by the IC user.

In / Out	CallDirection	The direction for each interaction; either Inbound or Outbound.
Remote Number	RemoteNumber	The number of the party that called (for Inbound calls), or the number of the called party (for Outbound calls). Caller ID is displayed if the direction is inbound and the remote number field is blank. A chat is represented by an IP address.
Remote Name	RemoteName	The name of the party that called (for Inbound calls). If Caller ID or a name lookup is not available, this could be External . The name of the called party, if known (for Outbound calls).
Call Duration	CallDurationSeconds	The total number of hours, minutes, and seconds the user spent on this interaction on this date. This number is displayed in hh:mm:ss format.
Hold Time	HoldDurationSeconds	The total amount of time this interaction was on hold. This number is displayed in hh:mm:ss format.
Total Number of Calls	Count of ConnectedDate	The summary of the total number of interactions the user placed or received during the specified date range for all account codes.
Total Avg. Duration	Avg (CallDurationSeconds)	The average amount of time the user spent on all inbound and outbound interactions during the specified date range and all account codes. This number is displayed in hh:mm:ss format.
Total Number Out Calls	Count (CallDirection); CallDirection =Outbound	The count of the interaction direction where the interaction direction is outbound for interactions placed by the current user for the date range specified and for all account codes.
Total Avg. Outbound Duration	Avg (CallDurationSeconds);	The average amount of time the user spent on outbound interactions during

	CallDirection = Outbound	the specified date range and for all account codes. This number is displayed in hh:mm:ss format.
Total Number Incoming Calls	Count (CallDirection); CallDirection = Inbound	The count of the interaction direction where the interaction direction is inbound for interactions placed by the user for the date range specified and for all account codes.
Total Avg. Inbound Duration	Avg (CallDurationSeconds); CallDirection = Inbound	The average amount of time the user spent on inbound interactions during the specified date range and for all account codes. This number is displayed in hh:mm:ss format.
Number of Calls	Count (ConnectedDate); by AccountCode	The total number of interactions placed or received by the user for a particular account code and the specified date range.
Avg. Duration	Avg (CallDurationSeconds); by AccountCode	The average amount of time the user spent on all inbound and outbound interaction during the specified date range for a particular account code. This number is displayed in hh:mm:ss format.
Number Out Calls	Count (CallDirection); CallDirection = Outbound; by AccountCode	The number of outbound interactions for the user during the specified date range for a particular account code.
Avg. Outbound Duration	Avg (CallDurationSeconds); CallDirection = Outbound; by AccountCode	The average duration of outbound interactions for the user during the specified date range for a particular account code.
Number Incoming Calls	Count (CallDirection); CallDirection = Inbound; by AccountCode	The number of inbound interactions for the user during the specified date range for a particular account code.
Avg. Inbound Duration	Avg (CallDurationSeconds); CallDirection = Inbound; by AccountCode	The average duration of inbound interactions for the user during the specified date range for a particular account code.

Account Code Name

AccountName

The name of the client/customer as entered into Interaction Administrator.

Record Selection Criteria:

{CallDetail.ConnectedDate} in {?StartDateTime} to {?EndDateTime} and

{CallDetail.LocalUserId} in {?StartUser} to {?EndUser} and

{CallDetail.SiteId} in {?StartSiteId} to {?EndSiteId} and

{CallDetail.AccountCode} in {?StartAccountCode} to {?EndAccountCode}

Formulas:

All times are expressed as hh:mm:ss. This formula is used throughout the report to convert seconds to hh:mm:ss. This formula is external to the report file.

Averages are calculated (see below) by taking the sum of the CallDurationSeconds field and dividing by the count of the ConnectedDate. We are not calculating the average of an average. We recalculate the formula below to figure the Grand Total Averages.

Averages – Sum(CallDetail.CallDurationSeconds) / Count(CallDetail.ConnectedDate)

Account Code Call Detail by User Report

The Account Codes Call Detail by User Report displays all activity for a particular account code by user based on a selected range of users. The report is designed to help a supervisor determine what account code was used on a interaction, and to review the information regarding users’ interactions for a specific date range.

Note

This report will not include interactions that were not assigned an account code. Currently, there is no way to query a range of account codes for a record that has a null value for account code. If you want to report on interactions that have no account code assigned, see the User Call Detail report.

Parameters

You specify a range of dates, times, users, site IDs, and account codes to include in the report. IC sorts this report by account code, user and then by date in ascending order.

Sample report

Click on the image below to view a sample of this report.

The screenshot shows a 'Sample Report' from GENESYS. The report title is 'Sample Report' and the subtitle is 'INTERACTION ADMINISTRATION'. The report is for 'Account Code' and 'User'. The table has the following columns: Account Code, User, Extension, Date, Time, In/Out, Remote Number, Remote Name, and % of Total Interactions. The data rows show various interaction records with values for each field.

Report Element

Report Field or Value

Field or Value Description

Account Code

AccountCode

The name of the selected account code. This displays the number as well as the account code name. If this account code has been deleted in Interaction Administrator, **N / A** is displayed in the customer name field.

User

LocalUserId

The name of the IC user included in the specified range of users.

Extension

LocalNumber

The extension of the IC user.

Date

ConnectedDate

The date for each day included in the date range for this the report.

Time

ConnectedTime

The time each connected interaction was placed or received by the IC user.

In / Out

CallDirection

The direction for each interaction; either Inbound or Outbound.

Remote Number

RemoteNumber

The number of the party that called (for Inbound interactions), or the number of the called party (for Outbound interactions). Caller ID is displayed if the direction is inbound and the remote number field is blank. A chat is represented by an IP address.

Remote Name

RemoteName

The name of the party that called (for Inbound interactions). If Caller ID or a name lookup is not available, this could be **External**. The name of the called party, if known (for Outbound

interactions).

Call Duration	CallDurationSeconds	The total number of hours, minutes, and seconds the user spent on this interaction on this date. This number is displayed in hh:mm:ss format.
Hold Time	HoldDurationSeconds	The total amount of time this interaction was on hold. This number is displayed in hh:mm:ss format.
Total Number of Calls	Count of ConnectedDate	The summary of the total number of interactions the user placed or received during the specified date range for all account codes.
Total Avg. Duration	Avg (CallDurationSeconds)	The average amount of time the user spent on all inbound and outbound interactions during the specified date range and all account codes. This number is displayed in hh:mm:ss format.
Total Number Out Calls	Count (CallDirection); CallDirection = Outbound	The count of the interaction direction where the interaction direction is outbound for interactions placed by the current user for the date range specified and for all account codes.
Total Avg. Outbound Duration	Avg (CallDurationSeconds); CallDirection = Outbound	The average amount of time the user spent on outbound interactions during the specified date range and for all account codes. This number is displayed in hh:mm:ss format.
Total Number Incoming Calls	Count (CallDirection); CallDirection = Inbound	The count of the interaction direction where the interaction direction is inbound for interactions placed by the current user for the date range specified and for all account codes.
Total Avg. Inbound Duration	Avg (CallDurationSeconds); CallDirection = Inbound	The average amount of time the current user spent on inbound interactions during the specified date range and for all account codes. This number is displayed in hh:mm:ss

format.

Number of Calls	Count (ConnectedDate); by AccountCode	The total number of interactions placed or received by the current user for a particular account code and the specified date range.
Avg. Duration	Avg (CallDurationSeconds); by AccountCode	The average amount of time the current user spent on all inbound and outbound interaction during the specified date range for a particular account code. This number is displayed in hh:mm:ss format.
Number Out Calls	Count (CallDirection); CallDirection = Outbound; by AccountCode	The number of outbound interactions for the current user during the specified date range for a particular account code.
Avg. Outbound Duration	Avg (CallDurationSeconds); CallDirection = Outbound; by AccountCode	The average duration of outbound interactions for the user during the specified date range for a particular account code.
Number Incoming Calls	Count (CallDirection); CallDirection = Inbound; by AccountCode	The number of inbound interactions for the user during the specified date range for a particular account code.
Avg. Inbound Duration	Avg (CallDurationSeconds); CallDirection = Inbound; by AccountCode	The average duration of inbound interactions for the user during the specified date range for a particular account code.
Account Code Name	AccountName	The name of the client / customer as entered into Interaction Administrator. If the account code has been deleted in Interaction Administrator, N / A is displayed in this name field.

Record Selection Criteria:

{CallDetail.ConnectedDate} in {?StartDateTime} to {?EndDateTime} and

{CallDetail.LocalUserId} in {?StartUser} to {?EndUser} and

{CallDetail.SiteId} in {?StartSiteId} to {?EndSiteId} and

{CallDetail.AccountCode} in {?StartAccountCode} to {?EndAccountCode}

Formulas:

Averages are calculated (see below) by taking the sum of the CallDurationSeconds field and dividing by the count of the ConnectedDate. We are not calculating the average of an average. We recalculate the formula below to figure the Grand Total Averages.

Averages – Sum(CallDetail.CallDurationSeconds) / Count(CallDetail.ConnectedDate)

Account Code Call Summary by Date Report

The Account Codes Call Summary by Date Report displays an interaction summary for each date including the number of interactions, total duration, and average duration. This supervisor report is designed to help a user determine what account codes were used on based on a summary of the user’s interactions for a specific date range.

Note

This report will not include interactions that were not assigned an account code. Currently, there is no way to query a range of account codes for a record that has a null value for account code. If you want to report on interactions that have no account code assigned, see the User Call Detail report.

Parameters

You specify a range of dates, times, users, site IDs, and account codes to include in the report. IC sorts this report by account code and date in ascending order, and then by user in alphabetical order.

Report Element

Report Field or Value

Field or Value Description

Account Code	AccountCode	The name of the selected account code. This displays the number as well as the account code name.
User	LocalUserId	The name of the IC user included in the specified range of users.
Extension	LocalNumber	The extension of the IC user.
Date	ConnectedDate	The date for each day included in the date range for this the report.
Time	ConnectedTime	The time each connected interaction was placed or received by the IC user.
Total Calls	Count of ConnectedDate	The summary of the total number of interactions the user placed or received during the specified date range for all account codes.
Avg. Duration	Avg (CallDurationSeconds)	The average amount of time the user spent on all inbound and outbound interactions during the specified date range and all account codes. This number is displayed in hh:mm:ss format.
Outbound Calls	Count (CallDirection); CallDirection =Outbound	The count of the interaction direction where the interaction direction is outbound for interactions placed by the current user for the date range specified and for all account codes.
Avg. Out Duration	Avg (CallDurationSeconds); CallDirection = Outbound	The average amount of time the user spent on outbound interactions during the specified date range and for all account codes. This number is displayed in hh:mm:ss format.
Inbound Calls	Count (CallDirection); CallDirection = Inbound	The count of the interaction direction where the interaction direction is inbound for interactions placed by the current user for the date range specified and for all account codes.

Avg. In Duration	Avg (CallDurationSeconds); CallDirection = Inbound	The average amount of time the current user spent on inbound interactions during the specified date range and for all account codes. This number is displayed in hh:mm:ss format.
Number of Calls	Count (ConnectedDate); by AccountCode	The total number of interactions placed or received by the current user for a particular account code and the specified date range.
Avg. Duration	Avg (CallDurationSeconds); by AccountCode	The average amount of time the current user spent on all inbound and outbound interaction during the specified date range for a particular account code. This number is displayed in hh:mm:ss format.
Number Out Calls	Count (CallDirection); CallDirection = Outbound; by AccountCode	The number of outbound interactions for the current user during the specified date range for a particular account code.
Avg. Outbound Duration	Avg (CallDurationSeconds); CallDirection = Outbound; by AccountCode	The average duration of outbound interactions for the user during the specified date range for a particular account code.
Number Incoming Calls	Count (CallDirection); CallDirection = Inbound; by AccountCode	The number of inbound interactions for the user during the specified date range for a particular account code.
Avg. In Duration	Avg (CallDurationSeconds); CallDirection = Inbound; by AccountCode	The average duration of inbound interactions for the user during the specified date range for a particular account code.
Account Code Name	AccountName	The name of the client / customer as entered into Interaction Administrator.
Total Duration	Sum(CallDurationSeconds)	The total amount of time spent on all interactions for a given account code for a given user on a given day. This number will be expressed as hh:mm:ss
Outbound Duration	Sum(CallDurationSeconds); CallDirection = Outbound	The total amount of time spent by the selected users on outbound interactions during the specified date

range and for all account codes. This number will be expressed as hh:mm:ss.

Inbound Duration

Sum(CallDurationSeconds); CallDirection = Inbound The total amount of time spent by the selected users on inbound interactions during the specified date range and for all account codes. This number will be expressed as hh:mm:ss.

Record Selection Criteria:

{CallDetail.ConnectedDate} in {?StartDateTime} to {?EndDateTime} and

{CallDetail.LocalUserId} in {?StartUser} to {?EndUser} and

{CallDetail.SiteId} in {?StartSiteId} to {?EndSiteId} and

{CallDetail.AccountCode} in {?StartAccountCode} to {?EndAccountCode}

Formulas:

All times are expressed as hh:mm:ss. This formula is used throughout the report to convert seconds to hh:mm:ss. This formula is external to the report file.

Averages are calculated (see below) by taking the sum of the CallDurationSeconds field and dividing by the count of the ConnectedDate. We are not calculating the average of an average. We recalculate the formula below to figure the Grand Total Averages.

Averages – $\text{Sum}(\text{CallDetail.CallDurationSeconds}) / \text{Count}(\text{CallDetail.ConnectedDate})$

Account Code Call Summary by User Report

The Account Codes Call Summary by User Report, which is a Supervisor version of the Account Code Call Summary for Current User Report, displays all activity for a particular account code by user as specified in the range of users, then by date. The account code is subtotaled by user and then by account code.

The report is designed to help a supervisor determine what account codes were used based on a summary of the users' interactions for a specific date range.

Note

This report will not include interactions that were not assigned an account code. Currently, there is no way to query a range of account codes for a record that has a null value for account code. If you want to report on interactions that have no account code assigned, see the User Call Detail report.

Parameters

You specify a range of dates, times, users, site IDs, and account codes to include in the report. IC sorts this report by account code, user, and then by date in ascending order. The Account codes and users are in alphabetical order.

Report Element

Report Field or Value

Field or Value Description

Account Code

AccountCode

The name of the selected account code. This displays the number as well as the account code name.

User

LocalUserId

The name of the IC user included in the specified range of users.

Extension

LocalNumber

The extension of the IC user.

Date

ConnectedDate

The date for each day included in the date range for this the report.

Time

ConnectedTime

The time each connected interaction was placed or received by the IC user.

Total Calls

Count of ConnectedDate

The summary of the total number of interactions the user placed or received during the specified date range for all account codes.

Avg. Duration

Avg (CallDurationSeconds)

The average amount of time the user spent on all inbound and outbound interactions during the specified date range and all account codes. This number is displayed in hh:mm:ss format.

Outbound Calls

Count (CallDirection);
CallDirection =Outbound

The count of the interaction direction where the interaction direction is outbound for interactions placed by

		the current user for the date range specified and for all account codes.
Avg. Out Duration	Avg (CallDurationSeconds); CallDirection = Outbound	The average amount of time the user spent on outbound interactions during the specified date range and for all account codes. This number is displayed in hh:mm:ss format.
Inbound Calls	Count (CallDirection); CallDirection = Inbound	The count of the interaction direction where the interaction direction is inbound for interactions placed by the current user for the date range specified and for all account codes.
Avg. In Duration	Avg (CallDurationSeconds); CallDirection = Inbound	The average amount of time the user spent on inbound interactions during the specified date range and for all account codes. This number is displayed in hh:mm:ss format.
Number of Calls	Count (ConnectedDate); by AccountCode	The total number of interactions placed or received by the user for a particular account code and the specified date range.
Avg. Duration	Avg (CallDurationSeconds); by AccountCode	The average amount of time the user spent on all inbound and outbound interactions during the specified date range for a particular account code. This number is displayed in hh:mm:ss format.
Number Out Calls	Count (CallDirection); CallDirection = Outbound; by AccountCode	The number of outbound interactions for the user during the specified date range for a particular account code.
Avg. Outbound Duration	Avg (CallDurationSeconds); CallDirection = Outbound; by AccountCode	The average duration of outbound interactions for the user during the specified date range for a particular account code.
Number Incoming Calls	Count (CallDirection); CallDirection = Inbound; by AccountCode	The number of inbound interactions for the user during the specified date range for a particular account code.

Avg. Inbound Duration	Avg (CallDurationSeconds); CallDirection = Inbound; by AccountCode	The average duration of inbound interactions for the user during the specified date range for a particular account code.
Account Code Name	AccountName	The name of the client / customer as entered into Interaction Administrator.
Total Duration	Sum(CallDurationSeconds)	The total amount of time spent on all interactions for a given account code for a given user on a given day. This number will be expressed as hh:mm:ss
Outbound Duration	Sum(CallDurationSeconds); CallDirection = Outbound	The total amount of time spent by the selected users on outbound interactions during the specified date range and for all account codes. This number will be expressed as hh:mm:ss.
Inbound Duration	Sum(CallDurationSeconds); CallDirection = Inbound	The total amount of time spent by the selected users on inbound interactions during the specified date range and for all account codes. This number will be expressed as hh:mm:ss.

Record Selection Criteria:

{CallDetail.ConnectedDate} in {?StartDateTime} to {?EndDateTime} and
 {CallDetail.LocalUserId} in {?StartUser} to {?EndUser} and
 {CallDetail.SiteId} in {?StartSiteId} to {?EndSiteId} and
 {CallDetail.AccountCode} in {?StartAccountCode} to {?EndAccountCode}

Formulas:

All times are expressed as hh:mm:ss. This formula is used throughout the report to convert seconds to hh:mm:ss. This formula is external to the report file.

Averages are calculated (see below) by taking the sum of the CallDurationSeconds field and dividing by the count of the ConnectedDate. We are not calculating the average of an average. We recalculate the formula below to figure the Grand Total Averages.

Averages – $\text{Sum}(\text{CallDetail.CallDurationSeconds}) / \text{Count}(\text{CallDetail.ConnectedDate})$

Agent Queue Activation

Agent Queue Activation

The Agent Queue Activation reports display information on users who have been activated or deactivated by Agent or Workgroup. For more information, click a report under **Agent Queue Activation**.

Queue Activation by Agent Report

This report lists each agent in the specified range who have been activated or deactivated in an ACD or Custom workgroup queue during the given time period. Agents who have not been activated or deactivated during that time do not appear in this report. For each agent listed, the report shows the date and time of the change, the name of the workgroup and whether or not that workgroup has a queue, if the agent was activated or deactivated in the queue, and by whom.

Agents with the appropriate Access Control permissions ("Activate Self") can activate or deactivate themselves from a particular queue via the Workgroup Activation dialog in Interaction Client. Likewise, administrators and supervisors with the appropriate Access Control permissions ("Activate Others") in Interaction Administrator can activate or deactivate agents from queues via Interaction Supervisor or Interaction Administrator. This report indicates who activated or deactivated the agent, and the time of the activation/deactivation events.

The activation and deactivation event criteria includes:

1. When an agent is activated or deactivated from the Workgroup Activation dialog in Interaction Client or Interaction Supervisor.
2. When a user is added or removed from an ACD or Custom workgroup in Interaction Administrator. By default, users are added in an Activated state.
3. When an ACD or Custom workgroup is created or deleted in Interaction Administrator. By default, users are added in an Activated state when the workgroup is created.

Note:

Agents can be logged in to an IC server but not necessarily "active" in the workgroup queues in which they are members. In addition, agents can be activated or deactivated on a per queue basis. By default, agents are added to workgroups in an "Activated" state.

Parameters

You specify a range of dates, times, site IDS, agents and workgroups to include in the report. IC sorts this report by Site ID, Agent, Date, Time, and Workgroup. If you specify a range of workgroups, only ACD and Custom workgroup queues are included in the report.

Note The Shift Time Range parameter has a default value of 12:00 AM to 11:59 PM.

Sample report

Click on the image below to view a sample of this report.

The screenshot shows a 'Sample Report' from GENESYS. The table contains columns for Agent, Site, and various metrics. The data is organized into a grid with alternating light blue and white rows. The columns include Agent, Site, and various metrics.

Visual Elements

Report Element	Report Field or Value	Field or Value Description
Site ID	SiteId	Appears in multi-site environments and reflects the numeric site identifier for each site in the range.
Agent	UserId	Shows the name of each agent who was activated or deactivated in the queue during the specified time range. Agents who were not activated or deactivated during that time do not appear in the report. Also, agent activation and deactivation events are independent of the agent's user status and logged in status.
Workgroup	Workgroup	Shows the name of each ACD and Custom workgroup queue included in the report parameter range.
First Change	(derived)	Shows the date/time of the first activation or deactivation change in the specified time range for the current Site ID and Workgroup.
Last Change	(derived)	Shows the date/time of the last activation or deactivation change in the specified time range for the current Site ID and Workgroup.
Total Changes	(derived)	Shows the total number of agent activation and deactivation changes for the current Site ID and Workgroup.
Date Time	ActivationDateTime	Shows the local date and time an agent was activated or deactivated in a queue. See top of this page for activation and deactivation criteria.

Has Queue?	HasQueueFlag	Shows yes if the named workgroup is defined in Interaction Administrator as an ACD or Custom workgroup with a queue. In the current release, only ACD and Custom workgroup queues can activate and deactivate agents.
Activated	ActivationFlag	When an agent is activated in a workgroup queue, the entry appears as "Yes" in the Activated column. When an agent is deactivated, the entry appears as "No".
By Whom?	ActivatedBy	Shows the IC user name or role of the person who activated or deactivated the agent. If a user with "Activate Self" or "Activate Others" rights activates or deactivates themselves or another user via Interaction Client or Interaction Supervisor, that user's IC account name appears in this column. If an administrator adds or removes a user from an ACD or Custom workgroup in Interaction Administrator, it appears in this column as "Administrator - User Added" or "User Removed". If an administrator creates or deletes an ACD or Custom workgroup in Interaction Administrator, each member of that workgroup has an entry with "Administrator - Workgroup Added" or "Workgroup Removed".

Record Selection Criteria:

{AgentQueueActivationHist.userID} in {?Agent} and

{AgentQueueActivationHist.WorkGroup} in {?Workgroup} and

{AgentQueueActivationHist.ActivationDateTime} in {?DateTime} and

{@StatusTime} in {?ShiftTime} and

{AgentQueueActivationHist.SiteID} in {?SiteID}

Agent Activation by Workgroup Report

This report lists the specified (ACD and Custom) workgroup queue(s) and all of the agents who were activated or deactivated in that queue during the given period. Agents with the appropriate Access Control permissions ("Activate Self") can activate or deactivate themselves from a particular queue via the Workgroup Activation dialog in Interaction Client. Likewise, administrators and supervisors with the appropriate Access Control permissions ("Activate Others") in Interaction Administrator can activate or deactivate agents from queues via Interaction Supervisor or Interaction Administrator. This report indicates who activated or deactivated the agent, and the time of the activation/deactivation events.

The activation and deactivation event criteria includes:

1. When an agent is activated or deactivated from the Workgroup Activation dialog in Interaction Client or Interaction Supervisor.
2. When a user is added or removed from an ACD or Custom workgroup in Interaction Administrator. By default, users are added in an Activated state.
3. When an ACD or Custom workgroup is created or deleted in Interaction Administrator. By default, users are added in an Activated state when the workgroup is created.

Note

Agents can be logged in to an IC server but not necessarily "active" in the workgroup queues in which they are members. In addition, agents can be activated or deactivated on a per queue basis. By default, agents are added to workgroups in an "Activated" state.

Parameters

You specify a range of dates, times, site IDS, agents and workgroups to include in the report. IC sorts this report by Site ID, Workgroup, Date, Time, and Agent. If you specify a range of workgroups, only ACD and Custom workgroup queues are included in the report.

Call - Supervisor

Call - Supervisor

The Call - Supervisor reports display information about inbound and outbound calls for the Supervisor. Information is displayed in detail, summary, and graph formats. For more information, click a report under **Call - Supervisor**.

(Graph) Area Code Report

This graph shows all outbound calls by area code, and includes total duration of calls, total calls to that area code, and average duration of calls to that area code. The international version of this report is the International Remote number Logical Component 1 graph. The Area Code graph provides managers with regional calling patterns. By using this report, you can determine the distribution of calls to various area codes.

Parameters

You specify the range of country codes, area codes (enter a "-" (dash) for a null value), site IDs, and date times as parameters. You can specify all or part of a day in the time range. You can specify if you want to see detail or summary and if want to print the graph.

{?EndRemoteNumberCountryCode} and
{CallDetail.SiteId} in {?StartSiteId} to {?EndSiteID}
```

(Graph) Calls Processed User Comparison Report

This graph shows the number of inbound and outbound calls and inbound chats (all chats have an inbound direction) processed by each user for a given time period. IC sorts the calls and chats by local user IDs and dates.

Use this report to compare and evaluate the volume of inbound calls each agent processes in the specified time range.

Note

If your report output contains a large number of users, it may be difficult to read. Avoid generating this report for a large range of users. Due to the nature of graphics in this report, please limit the range of users you compare so that the legend is properly displayed.

Parameters

You specify the range of dates and times, IC user names, and site IDs as parameters. The IC user names are defined in Interaction Administrator on the IC server. You can specify all or part of a day in the time range. We recommend you use whole days in the date / time range.

Each line in the data represents one interval, or in our case a half an hour. In order to report by hour, you need to add the 12:00 analog information to the 12:30 analog information $85/7200 = 1.18$. The formula IC uses is the $(\text{Sum}(tAllBusy)/\text{Sum}(tActiveLines))*100$ to calculate the percentage all busy by hour.

The report is based on a logging subsystem that is updated every 10 seconds plus time dependent on implementation architecture or topology.

Graph Elements

Report Field or Value

Field or Value Description

User identifiers

LocalUserId

The IC user names specified in the range. IC user names are defined in Interaction Administrator on the IC server. The user IDs are displayed on the horizontal axis.

Number of inbound calls (vertical)

Where CallDirection=Inbound and a count of the records in CallDetail.ConnectedDate

A sum of the number of inbound and outbound calls, and inbound chats connected to each IC user. This number is displayed on the vertical axis.

Detail

Sum(CallDirection)

The total number of call placed or received for the specified date range.

Record Selection Criteria:

{CallDetail.ConnectedDate} in {?StartDateTime} to {?EndDateTime} and {CallDetail.LocalUserId} in {?StartUser} to {?EndUser} and {CallDetail.SiteId} in {?StartSiteId} to {?EndSiteId}

(Graph) Incoming Calls by User Report

This graph shows the number of inbound calls and chats associated with each user specified in the range. This report does not include system-owned calls.

Note

You should not run the report for more than 50 users or the information displayed on the report might not be legible.

Parameters

You specify the range of dates and times, site IDs, and user queues as parameters. You can specify all or part of a day in the time range. The report is based on a table that is updated every 10 seconds plus time dependent on implementation architecture or topology.

Report Field or Value

Field or Value Description

Number of calls (vertical)

Sum of calls and chats where CallDirection=Inbound

The number of inbound call and chat attempts reported for each line specified. This includes abandoned calls and chats.

User names

Graph Title: Number of Inbound Calls

The name of each IC user specified in the report.

Record Selection Criteria:

{CallDetail.LocalUserId} in {?StartUser} to {?EndUser} and

{CallDetail.CallDirection} = "Inbound" and

{CallDetail.ConnectedDate} in {?StartDateTime} to {?EndDateTime} and

{CallDetail.SiteId} in {?StartSiteId} to {?EndSiteId}

Note

The data is graphed on change of Local User Id.

Formulas:

Incounter Formula:

If {CallDetail.CallDirection} = **Inbound** then 1 else 0.

(Graph) International Remote Number Logical Component One Report

This graph shows the exchanges dialed, and the duration of calls to those exchanges within the specified area codes. This is the international version of the Area Code Graph report. It can be useful if you need to analyze outbound call volume to specific geographic areas. IC sorts this graph by country code and then by exchange.

Parameters

You specify a range of LoComp 1 codes (enter a "-" (dash) for a null value), country codes, site IDs, and date times to include in the report. You can specify if you want to see detail or summary and if want to print the graph.

{CallDetail.SiteId} in {?StartSiteId}to {?EndSiteId}

Note

The title of this graph is Number of Outbound Calls. The graph displays bar on change of Local User ID.groutusercalls and graphs on sum of outcounter.

Formulas

Outcounter Formula:

outcounter=If {CallDetail.CallDirection} = Outbound then 1 else 0

(Supervisor) Caller ID Detail Report

This report shows details of external identifiable incoming calls or chats received by each user. This Supervisor report displays data for a range of users.

Note

IC displays chats under the IP address from where the chat originated. The chat header name displayed is the name of the first chat found in the query of the data. This name does not represent the person that made all the chats.

Critical information can be established from Caller ID reports such as customer calling patterns, time to service the account, and level of service to the customer. The Caller ID Detail Report is best used by managers who want to see how accounts are being serviced and the profitability of the accounts.

Parameters

You specify a range of dates, users, site IDS, and caller ID numbers to include in the report. IC sorts this report by Caller ID numbers and then Names.

Note

If you enter a range for one of these specific parameters (caller IDs, dialed numbers, DNIS, and user IDs), and a record included in this range has a null value for any one of these

		the call was an Intercom call that was terminated before the Remote party was specified.
Caller ID Number of Calls	Count of ConnectedDate	Counts the number of call detail entries for this Caller ID number.
Total Caller ID Duration	Sum (CallDurationSeconds)	Displays the total number of seconds for all calls associated with this Caller ID number.
Avg. Duration	Avg of CallDurationSeconds	Displays the average number of seconds for each call from this Caller ID number.
Date	ConnectedDate	The date for each call from this Caller ID number.
Time	ConnectedDate converted to time	The time each call from this Caller ID number connected to a party.
User	LocalUserId	The name of the IC party this call connected to. This value will only be set if there was a user logged in at the station placing the call, or the call was directed to an identifiable user. An empty field will occur if these conditions are not met.
Ext.	LocalNumber	The extension of the IC party to which this call is connected.
Hold Time	HoldDurationSeconds	The number of seconds that a call from this Caller ID was on hold.
Call Duration	CallDurationSeconds	The total number of seconds that a call from this Caller ID was connected to an IC user.

Record Selection Criteria:

{CallDetail.ConnectedDate} in {?StartDateTime} to {?EndDateTime} and
 {CallDetail.CallDirection} = "Inbound" and
 {CallDetail.LocalUserId} in {?StartUser} to {?EndUser} and
 {CallDetail.RemoteNumber} in {?StartCallerID} to {?EndCallerID}and
 {CallDetail.SiteId} in {?StartSiteId} to {?EndSiteId}

(Supervisor) Caller ID Summary Report

This report shows a summary of inbound calls and chats each IC user received from each identified external telephone number or IP address. IC displays chats under the IP address from where the chat

originated. The chat header name displayed is the name of the first chat found in the query of the data. This name does not represent the person that made all the chats.

Parameters

You specify a range of dates, users, site IDS, and caller ID numbers to include in the report. IC sorts this report by IC user name.

Note

If you enter a range for one of these specific parameters (caller IDs, dialed numbers, DNIS, and user IDs), and a record included in this range has a null value for any one of these parameters, then this record will be excluded on the report. It is not possible to include these records at this time.

Visual Elements

Report Element	Report Field or Value	Field or Value Description
User	LocalUserId	The name of an IC user account included in the range of users for a report.
Extension	LocalNumber	The extension of the IC user.
Caller ID	RemoteNumber or RemoteNumberFmt	The external phone number or extension of the calling party. The call contains the number of a calling party if caller ID is available. In the case where RemoteNumberFmt is blank, then IC uses the RemoteNumber with an * added to the end of the number.

If both the Remote NumberFmt and the RemoteNumber are blank, then the RemoteCallerID is used with two ** added to the end of the number. If all these are blank, then **N / A** is displayed on the report. A null or empty value is possible if the call was an **Intercom** call that was terminated before the Remote party was specified.

Name	RemoteNameFmt	The caller's name, if known. For intercom calls, the calling IC user name appears. Inbound calls that provide Extended Caller ID information will have the calling party name. Out of Area , or External Call appears if caller ID is not available. An empty value is possible if the call was an Intercom call that was terminated before the Remote party was specified.
Total Calls	Count of ConnectedDate entries	The number of inbound call detail entries for a Caller ID number.
Total Duration	Sum(CallDurationSeconds)	Displays the total number of seconds for all calls received from a Caller ID number, on the given date(s).
Avg. Duration	Sum(CallDurationSeconds) / Count(ConnectedDate)	Displays the average number of seconds for all calls from this Caller ID number, on the given date(s).
Hold Time	HoldDurationSeconds	The number of seconds that a call from a Caller ID was on hold.
Avg Hold Duration	Sum(HoldDurationSeconds / Count(ConnectedDate)	The average time that all calls from a Caller ID were on hold, on the given date(s).
Unique Caller IDs (summary)	Count of unique RemoteNumber entries	The total number of unique Caller ID numbers included in the specified range of dates in the report.
Number of Caller ID Calls (summary)	Count of all ConnectedDate entries	The total number of inbound call detail entries for all Caller ID numbers.

Total Duration (summary)	Sum(CallDurationSeconds)	Displays the total number of seconds for all Caller ID calls, on the given date(s).
Avg. Duration (summary)	Sum(CallDurationSeconds) / Count(ConnectedDate)	Displays the average time for all Caller ID calls, on the given date(s).
Total Hold Time (summary)	Sum(HoldDurationSeconds)	The number of seconds that all Caller ID calls were on hold, on the given date(s).
Average Hold Time(summary)	Sum(HoldDurationSeconds)) / Count(ConnectedDate)	The average number of seconds that all Caller ID calls were on hold, on the given date(s).

(Supervisor) User Outbound Call Summary by Number Dialed Report

This report summarizes dialed outbound numbers for a specific time period and the users who called them.

This Supervisor User Summary report is beneficial for professional services and environments with specific accounts. Each user’s calls to specific numbers are summarized. You can use this report to evaluate accounts and service information. This Supervisor report displays a range of users.

Parameters

You specify a range of dates, dialed numbers, user IDs, and site IDs to include in the report. The StartDialedNum and EndDialedNum fields represent an inclusive range of dialed phone numbers to search. IC sorts this report by IC users.

If you enter a range for one of these specific parameters (caller IDs, dialed numbers, DNIS, and user IDs), and a record included in this range has a null value for any one of these parameters, then this record will be excluded on the report. It is not possible to include these records at this time.

Sample report

Click on the image below to view a sample of this report.

The screenshot shows a 'Sample Report' header with the GENESYS logo. Below the header is a table with the following columns: Report Element, Report Field or Value, and Field or Value Description. The table contains several rows of data, including 'User', 'Dialled Number', 'Name', 'Total Calls', and 'Total Duration'.

Report Element

Report Field or Value

Field or Value Description

User

LocalUserId

The name of an IC user account that dialed outbound calls.

Dialled Number

RemoteNumber or
RemoteNumberFmt

The external phone number or extension of the calling party. The call contains the number of a calling party if caller ID is available. In the case where RemoteNumberFmt is blank, then IC uses the RemoteNumber with an * added to the end of the number. If both the Remote NumberFmt and the RemoteNumber are blank, then the RemoteCallerID is used with two ** added to the end of the number. If all these are blank, then **N / A** is displayed on the report. A null or empty value is possible if the call was an **Intercom** call that was terminated before the Remote party was specified.

Name

RemoteName

The name of the dialed party, if known.

Total Calls

Count of ConnectedDate

The total number of calls the user dialed to this number, in the specified ranges.

Total Duration

Sum(CallDurationSeconds)

Displays the total number of seconds for all calls received from a Caller ID

		number, on the given date(s).
Avg. Duration	$\text{Sum}(\text{CallDurationSeconds}) / \text{Count}(\text{ConnectedDate})$	Displays the average number of seconds for all calls from this Caller ID number, on the given date(s).
Hold Time	$\text{Sum}(\text{HoldDurationSeconds})$	The number of seconds that a call from a Caller ID was on hold.
Avg. Hold	$\text{Sum}(\text{HoldDurationSeconds} / \text{Count}(\text{ConnectedDate}))$	The average time that all calls from a Caller ID were on hold, on the given date(s).
Unique Dialed Numbers (summary)	Distinct Count of RemoteNumber	The total number of unique outbound phone numbers dialed by this user during the specified ranges.
Number of Calls (summary)	Count of ConnectedDate	The total number of calls this user dialed during the specified ranges.
Total Duration (summary)	$\text{Sum}(\text{CallDurationSeconds})$	Displays the total number of seconds for all calls received from a Caller ID number, on the given date(s).
Average Duration (summary)	$\text{Sum}(\text{CallDurationSeconds}) / \text{Count}(\text{ConnectedDate})$	Displays the average number of seconds for all calls from this Caller ID number, on the given date(s).
Total Hold Time (summary)	$\text{Sum}(\text{HoldDurationSeconds})$	The total number of seconds that calls were on hold.
Average Hold Time (summary)	$\text{Sum}(\text{HoldDurationSeconds} / \text{Count}(\text{ConnectedDate}))$	The total time all calls during the specified ranges were on hold.

Record Selection Criteria:

{CallDetail.CallDirection} = "Outbound" and
 {CallDetail.RemoteNumber} in {?StartDialedNum} to {?EndDialedNum} and
 {CallDetail.ConnectedDate} in {?StartDateTime} to {?EndDateTime} and
 {CallDetail.LocalUserId} in {?StartUser} to {?EndUser} and
 {CallDetail.SiteId} in {?StartSiteId} to {?EndSiteID}

Area Code/Exchange Summary Report

This report lists all outbound calls by area code, and includes total duration of calls, total calls to that area code, and average duration of calls to that area code. The international version of this report is the International Remote number Logical Component 2 Summary. The Area Code Summary report provides managers with regional calling patterns. By using this report, management can determine the distribution of calls to various regions of the country.

Parameters

You specify the range of country codes, area codes (enter a "-" (dash) for a null value), site IDs, and date times as parameters. You can specify all or part of a day in the time range.

Total

Sum ConnectedDate

The total number of calls for each extension are listed in the right-most column, and the total number of calls placed or received in each hour are listed in the last row of the report.

Record Selection Criteria:

{CallDetail.LocalNumber} in {?StartEXT} to {?EndEXT} and
{CallDetail.ConnectedDate} in {?StartDateTime} to {?EndDateTime} and
{@ConnectedTime} in {?StartShiftTime} to {?EndShiftTime} and
{CallDetail.SiteId} in {?StartSiteId} to {?EndSiteID}

Dialed Number Detail Report

This report shows all outbound calls sorted by dialed number, during a specified range of dates. Managers and supervisors can use this report to review all outbound calls and to see who is servicing specific accounts.

Parameters

You specify a range of dates, dialed numbers, and site IDs to include in the report. The StartDialedNum and EndDialedNum fields represent an inclusive range of dialed phone numbers to search. IC sorts this report by dialed numbers.

Notes

- The use of wildcards for the representation of variable numbers is supported. You can enter the range as a wildcard, i.e., dialed number range +13178????? to +13179?????.
- If you enter a range for one of these specific parameters (caller IDs, dialed numbers, DNIS, and user IDs), and a record included in this range has a null value for any one of these parameters, then this record will be excluded on the report. It is not possible to include these records at this time.

The screenshot shows a 'Sample Report' from Genesys. The report header includes 'Sample Report', 'GENESYS', and 'INTERACTION ADMINISTRATOR UNIQUE REPORT IDENTIFIER'. The table below has columns for Agency, Site, Application, Call Date, Call Time, and various metrics. The data rows show call details for different agencies and sites, including call counts and percentages.

Agency	Site	Application	Call Date	Call Time	Call Count	Call Rate	Call Duration	Call Cost	Call Status	Call Type	Call Reason	Call Outcome

<u>Report Element</u>	<u>Report Field or Value</u>	<u>Field or Value Description</u>
Dialed Number	RemoteNumber or RemoteNumberFmt	The external phone number or extension of the calling party. The call contains the number of a calling party if caller ID is available. In the case where RemoteNumberFmt is blank, then IC uses the RemoteNumber with an * added to the end of the number. If both the Remote NumberFmt and the RemoteNumber are blank, then the RemoteCallerID is used with two ** added to the end of the number. If all these are blank, then N / A is displayed on the report. A null or empty value is possible if the call was an Intercom call that was terminated before the Remote party was specified.
Name	RemoteName	The name of the party that an IC user called, if it is known.
Date	ConnectedDate	The date for each call to this remote number.
Time	ConnectedDate	The time each call to this remote number connected.
User	LocalUserId	The name of an IC user account that called this number.
Ext.	LocalNumber	The extension of the IC user.
Hold Time	Sum(HoldDurationSeconds)	The number of seconds that a call from a Caller ID was on hold.
Call Duration	CallDurationSeconds	The total number of seconds that a call from this Caller ID was connected to an IC user.
Number of Calls (summary)	Count of ConnectedDate	The total number of calls to the specified number in the given ranges.
Total Duration (summary)	Sum(CallDurationSeconds)	Displays the total number of seconds for all calls received from a Caller ID number, on the given date(s).
Avg Duration (summary)	Sum(CallDurationSeconds) / Count(ConnectedDate)	Displays the average number of seconds for all calls from this Caller ID number, on the given date(s).

Record Selection Criteria:

{CallDetail.ConnectedDate} in {?StartDateTime} to {?EndDateTime} and
 {CallDetail.CallDirection} = "Outbound" and
 {CallDetail.RemoteNumber} in {?StartDialedNum} to {?EndDialedNum} and
 {CallDetail.SiteId} in {?StartSiteId} to {?EndSiteId}

International Remote Number Logical Component Two Summary Report

This report shows the exchanges dialed, and the duration of calls to those exchanges within the specified city codes. This is the international version of the Area Code report. It can be useful if you need to analyze outbound call volume to specific geographic areas. IC sorts this report by country code and then by exchange.

Parameters

You specify a range of LoComp 1 codes (enter a "-" (dash) for a null value), country codes, site IDs, and date times to include in the report.

Report Element

Report Field or Value

Field or Value Description

Country	RemoteNumberCountry	The city code / area code dialed within the specified code and date ranges.
LoComp1	RemoteNumberLoComp1	The country codes dialed within the specified code and date ranges.
LoComp2	RemoteNumberLoComp2	The exchanges dialed within the associated code.
Total Duration	Sum(CallDurationSeconds)	The sum of CallDurationMinutes of outbound calls placed within the

		specified exchange, country number and code.
Total Calls	Count of RemoteNumber	The count of the number of outbound calls placed within the specified exchange, country number and code.
Average Duration	Sum(CallDurationSeconds) / Count(ConnectedDate)	The average amount of time of outbound calls placed within the specified exchange, country number and code.

Record selection criteria:

{CallDetail.CallDirection} = "Outbound" and
 {CallDetail.ConnectedDate} in {?StartDateTime} to {?EndDateTime} and
 {CallDetail.RemoteNumberCountry} in {?StartRemoteNumberCountryCode} to {?EndRemoteNumberCountryCode} and
 {CallDetail.RemoteNumberLoComp1} in {?StartCode} to {?EndCode} and
 {CallDetail.SiteId} in {?StartSiteId} to {?EndSiteId}

Station ID Detail Report

The Station ID Detail report shows the Station ID information by date for a selected range of stations. This report information includes call duration, end user, and hold time.

You can use these reports to monitor call activity placed or received from non-user assigned phones. For example, you could easily monitor activity on a lobby phone with these reports.

Parameters

You specify a range of dates, times, site IDs, and station IDs to include in the report. IC sorts this report by station ID, and then by date time in ascending order.

Report Element

Report Field or Value

Field or Value Description

Station ID

StationID

The station ID of the location where the interactions are being placed or received.

Date

ConnectedDate

The date for each day included in the date range selected for this report.

Time

ConnectedDate

The time that each interaction was received in the system.

End User

LocalUserID

The last person receiving the interaction or the person logged into the station, placing the interaction.

Ext

LocalNumber

The extension of the last IC user.

Wrap Up Code

WrapUpCode

The wrap up code assigned to this interaction.

Account Code

AccountCode

The account code assigned to this interaction.

Purpose Code

PurposeCode

The purpose code assigned to this interaction.

Disposition Code

DispositionCode

The disposition code assigned to this interaction.

Hold Time

HoldDurationSeconds

The total amount of time this call was on hold. This number will be expressed as hh:mm:ss

Interaction Duration

CallDurationSeconds

The total number of hours, minutes and seconds the user spent on this interaction. This number will be expressed as hh:mm:ss

Number of Interactions

Count (ConnectedDate); by RemoteNumber

The total number of interactions received or placed from the station ID for the specified date range.

Total Station ID Duration

Sum(CallDurationSeconds)

The total amount of time spent on all interactions for a given station id. This

number will be expressed as hh:mm:ss

Average Duration

Avg (CallDurationSeconds)

The average amount of time the selected users spent on interactions for the station ID during the specified date range. This number will be expressed as hh:mm:ss.

Record Selection Criteria:

{CallDetail.ConnectedDate} in {?StartDateTime} to {?EndDateTime} and

{CallDetail.SiteID} in {?StartSiteID} to {?EndSiteID} and

{CallDetail.RemoteNumber} in {?StartStationID} to {?EndStationID}

Formulas:

All times are expressed as hh:mm:ss. This formula is used throughout the report to convert seconds to hh:mm:ss. This formula is external to the report file.

Station ID Summary Report

The Station ID Summary report shows the Station ID summary information by date for a selected range of stations, including call duration, call count, and average duration.

Parameters

You specify a range of station IDs, dates, times, site IDs, and shift IDs to include in the report. IC sorts this report by station ID, and then by date time in ascending order.

Report Element

Report Field or Value

Field or Value Description

Station ID	StationID	The station ID of the location where the interactions are being placed or received.
Date	ConnectedDate	The date for each day included in the date range selected for this report.
Total Calls	Count (ConnectedDate)	The total number of calls placed or received by the current user for a particular account code and the specified date range.
Total Duration	Sum(CallDurationSeconds)	The total number of hours, minutes and seconds the user spent on this call. This number will be expressed as hh:mm:ss
Average Duration	Avg (CallDurationSeconds)	The average amount of time the selected users spent on all inbound and outbound calls during the specified date range. This number will be expressed as hh:mm:ss.
Outbound Calls	Count (CallDirection); CallDirection = "Outbound"	This is the count of the call direction where the call direction is outbound for calls placed by the current user for the date range specified.
Outbound Duration	Sum(CallDurationSeconds); CallDirection = "Outbound"	The total amount of time spent by the selected users on outbound calls during the specified date range. This number will be expressed as hh:mm:ss.
Avg. Outbound Duration	Avg (CallDurationSeconds); CallDirection = "Outbound"	The average duration of outbound calls for the current user during the specified date range for a particular account code.
Inbound Calls	Count (CallDirection); CallDirection = "Inbound"	This is the count of the call direction where the call direction is inbound for calls placed by the selected users for the date range specified and for all account codes.
Inbound Duration	Sum(CallDurationSeconds); CallDirection = "Inbound"	The total amount of time spent by the selected users on inbound calls during the specified date range and for all account codes. This number will be expressed as hh:mm:ss.
Avg Inbound Duration	Avg (CallDurationSeconds); CallDirection = "Inbound"	The average amount of time spent by the current user on inbound calls during the specified date range and for

		all account codes. This number will be expressed as hh:mm:ss.
Number of Calls	Count (ConnectedDate); by AccountCode	The total number of calls placed or received by the current user for a particular account code and the specified date range.
Avg. Duration	Avg (CallDurationSeconds); by AccountCode	The average amount of time the current user spent on all inbound and outbound calls during the specified date range for a particular account code. This number will be expressed as hh:mm:ss.
Number Out Calls	Count (CallDirection); CallDirection = "Outbound"; by AccountCode	The number of outbound calls for the current user during the specified date range for a particular account code.
Avg. Outbound Duration	Avg (CallDurationSeconds); CallDirection = "Outbound"; by AccountCode	The average duration of outbound calls for the current user during the specified date range for a particular account code.
Number Incoming Calls	Count (CallDirection); CallDirection = "Inbound"; by AccountCode	The number of inbound calls for the current user during the specified date range for a particular account code.
Avg. Inbound Duration	Avg (CallDurationSeconds); CallDirection = "Inbound"; by AccountCode	The average duration of inbound calls for the current user during the specified date range for a particular account code.
Inbound Duration	Sum(CallDurationSeconds); CallDirection = "Inbound"	The total amount of time spent by the selected users on inbound calls during the specified date range and for all account codes. This number will be expressed as hh:mm:ss.

Record Selection Criteria:

{CallDetail.stationid} in {?stationid} and
 {CallDetail.SiteId} in {?SiteId}) and
 {@StatusTime} IN {?ShiftTime} and
 {CallDetail.ConnectedDate} = {?DateTime}

Formulas:

All times are expressed as hh:mm:ss. This formula is used throughout the report to convert seconds to hh:mm:ss. This formula is external to the report file.

Averages - $\text{Sum}(\text{CallDetail.CallDurationSeconds}) / \text{Count}(\text{CallDetail.ConnectedDate})$

Averages are calculated by taking the sum of the CallDurationSeconds field and dividing by the count of the ConnectedDate. This is not an average of an average. The Grand Total Averages are recalculated based on the above formula.

Director

Director Reports

Interaction Director logs detail data in Director log tables created in the CIC database, and uses the data to create Interaction Director reports.

Interaction Director reports detail the Director interaction statistics for Enterprises using Interaction Director. The Director reports are displayed in the Interaction Reporter navigation pane when the Director product is installed.

The available reports are:

- Interaction Director Local / Remote Statistics
- Interaction Director Enterprise Group Interaction Statistics

For information on report elements, see **Interaction Director Reports** available from the PureConnect Documentation Library on the Genesys Web site at:

<http://help.genesys.com>

Director Reports

Interaction Director logs detail data in Director log tables created in the CIC database, and uses the data to create Interaction Director reports.

Interaction Director reports detail the Director interaction statistics for Enterprises using Interaction Director. The Director reports are displayed in the Interaction Reporter navigation pane when the Director product is installed.

DNIS

DNIS

The DNIS reports displays detailed information about inbound calls for each day. For more information, click a report under **DNIS**.

DNIS Detail Report

The Call Detail by DNIS report displays a detail of inbound calls for each day in the given range. The DNIS Detail Report includes: connected date, caller ID, remote name, remote number, local user, station ID, call duration, and number of calls.

Note

Analysis of database requirements of IC demonstrates that the collection of DNIS statistics increases the amount of data collection. To activate DNIS collection in the Queue Period Statistics table, go to the Report Configuration page of the Server configuration dialog in Interaction Administrator. From the Report Configuration page, select the **Generate DNIS reporting data** check box.

Parameters

You specify a range of dates, times, DNIS, and site IDs to include in the report. IC sorts this report by DNIS, by date, and then by time.

Note

If you enter a range for one of these specific parameters (caller IDs, dialed numbers, DNIS, and user IDs), and a record included in this range has a null value for any one of these parameters, then this record will be excluded on the report. It is not possible to include these records at this time.

Report Element

Report Field or Value

Field or Value Description

DNIS	DNIS	The DNIS obtained from the network on any inbound call.
DNIS Number of Calls	Count(Connected Date)	The count of the number of calls for the specified DNIS.
Total Call Duration	Sum (CallDurationSeconds)	The total time of the calls with the specified DNIS.
Avg. Duration	Sum (CallDurationSeconds) / Count(Connected Date)	The average amount of time for the calls with the specified DNIS.
Date	ConnectedDate	The date and time for the call with the specified DNIS.
Call ID	RemoteNumberFmt	The formatted version of the remote number, the external or extension number dialed. The digits or extension dialed to reach the remote party is displayed, if the remote number field in the database is blank, and an asterisk will follow it. The Caller ID is displayed if the direction is inbound and the remote number is blank, and two asterisks will follow it. NOCLID=No Caller ID; N / A=Not Available.
Name	RemoteName	Calls that provide Caller ID information will use the calling party's name. If the system did not receive notification of NOCLID and there is no Caller ID, then IC displays Unknown Name .
User	LocalUserId	The user ID of the person receiving the call. This field could be blank if the user to receive the call was not logged into the system.
Ext.	LocalNumber	The local phone number of the extension number receiving the call.

Station ID	StationID	Identifier for the station used to receive the call. A value of system indicates that the call was not associated with a station.
Call Duration	CallDurationSeconds	The duration of the call expressed in hh:mm:ss.
Hold Time	HoldDurationSeconds	The duration that the call was in a hold status expressed in hh:mm:ss.

Record Selection Criteria:

{CallDetail.ConnectedDate} in {?StartDateTime} to {?EndDateTime} and
 {CallDetail.CallDirection} = {@CallDirection} and
 {CallDetail.DNIS} in {?StartDNIS} to {?EndDNIS} and
 {CallDetail.SiteId} in {?StartSiteId} to {?EndSiteId}

Formulas:

All times are expressed as hh:mm:ss. This formula is used throughout the report to convert seconds to hh:mm:ss. This formula is external to the report file.

Statistics Group DNIS Daily Report

The Statistics Group DNIS Report displays a detail by day for the specified DNIS or DNIS range. The report is designed to give a summary report of the day's queue activity by DNIS. This report displays the number of ACD calls, number of abandoned calls, and percentages on abandoned and answered within the first service level as configured in Interaction Administrator.

This report has Flexible Fields . By default, IC displays Service Level 1 in the first flexible field, but you can easily change this flexible field in Interaction Administrator, to show the other Service Levels:

- % Service Level 1 = 1
- % Service Level 2 = 2
- % Service Level 3 = 3
- % Service Level 4 = 4
- % Service Level 5 = 5
- % Service Level 6 = 6

The second flexible field shows Disconnect by default. You may change this default to these other values:

- Local Disconnect = 1
- Flowed Out = 2
- Grabbed = 3 (Note, this field is still available on this report, but IC does not currently use it.)

- Entered = 4
- Transferred = 5

These are configuration changes in Interaction Administrator, not runtime choices or parameters that you enter when you run your report. We indicate flexible fields in the Field or Value Description column of the Visual Elements list.

Note

Analysis of database requirements shows that the DNIS statistics collection will increase data collection. For this reason, we have set the DNIS server parameter, **QueuePeriodStatisticsGenDNISData**, default value to **No**. You should set this server parameter, which is in Interaction Administrator, to **Yes** if you want to collect the DNIS data.

Parameters

You specify a range of dates, times, DNIS (report group parameter), site IDs, and statistics group range to include in the report. IC sorts this report by DNIS, statistics group, and then by date.

The screenshot shows a 'Sample Report' header with the GENESYS logo. Below the header is a table with the following columns: Group, Start/End Date, Answered, Abandoned, % of Total, and % of Total Answered. The table contains several rows of data for different groups and date ranges.

Report Element

Report Field or Value

Field or Value Description

{none}

cReportGroup

The DNIS obtained from the network on any inbound call.

Date

dintervalStart

The date the calls entered the statistics group as specified in the date / time range.

ACD Calls Ans

nAnsweredACD

The sum of ACD calls answered for the specified statistics group and date range.

Avg. ACD Min	$tTalkACD / nAnsweredACD$	The total agent incoming ACD talk time divided by the number of ACD calls answered for the specified statistics group and date range.
Avg Speed Ans	$tAnsweredACD / nAnsweredACD$	The total amount of time the calls were alerting the agents divided by the total number of ACD calls answered for the specified statistics group and date range.
Avg ACW Min	$tACW / nAnsweredACD$	The total amount of time the agents spent of after call work divided by the total number of ACD calls answered for the specified statistics group and date range.
Aband Calls	$nAbandonedACD$	The number of calls abandoned while waiting for an agent. The sum of ACD calls abandoned in the queue before connecting to an agent for the specified statistics group and date range.
Avg Aband Min	$tAbandonedACD / nAbandonedACD$	The average amount of time the call spent in the queue before it was abandoned. The total amount of time the abandoned calls spent in an alerting status divided by the total number of ACD calls that were abandoned for the specified statistics group and date range.
Perc Aband	$(nAbandonedACD / nEnteredACD) * 100$	The total number of ACD calls that were abandoned in the queue divided by the total number of calls that entered the ACD queue for the specified statistics group and date range. This number is multiplied by 100 to get the percentage.
Service Level 1	$(nAnsweredACDSvcLv1 / nAnsweredACD) * 100$	Default Flexible Field – The default for this flexible field is Service Level 1. You can change the parameter value in Interaction Administrator if you wish to display a different value. Levels 1 through 6: The total number of ACD calls that were answered within the selected service level divided by the total number of ACD calls that were answered for the specified workgroup and date range. This number is multiplied by 100 to get the percentage. The service level intervals are determined in Interaction Administrator.
Service Level 2	$(nAnsweredACDSvcLv2 / nAnsweredACD) * 100$	Flexible Field – The percentage of calls that were answered within the second service level. The default second service level is 20 seconds.
Service Level 3	$(nAnsweredACDSvcLv3 / nAnsweredACD) * 100$	Flexible Field – The percentage of calls that were answered within the third service level.
Service Level 4	$(nAnsweredACDSvcLv4 / nAnsweredACD) * 100$	Flexible Field – The percentage of calls that were answered within the fourth service level.

Service Level 5	$(n\text{AnsweredACDSvcLv}5 / n\text{AnsweredACD}) * 100$	Flexible Field – The percentage of calls that were answered within the fifth service level.
Service Level 6	$(n\text{AnsweredACDSvcLv}6 / n\text{AnsweredACD}) * 100$	Flexible Field – The percentage of calls that were answered within the sixth service level.
Disconnect	nLocalDisconnectACD The sum of the ACD calls that were disconnected locally for the specified workgroup and date range.	Default Flexible Field – The default for this flexible field is Disconnect. You can change the parameter value in Interaction Administrator if you wish to display a different value. The number of ACD calls that were disconnected locally.
Flow Out	nFlowOutACD The sum of the ACD calls that were removed from the queue that were never answered by an agent for the specified workgroup and date range.	Flexible Field - The number of items in the queue that were removed before connecting to an agent.
Entered	nEnteredACD	Flexible Field - The sum of the calls that entered the ACD queue for the specified statistics group and date range.
Transfer	nTransferredACD	Flexible Field - The number of calls that were transferred while in this queue. Transfers from workgroup to workgroup will not show up on this count, and will only show as an nFlowOutACD. The sum of the calls that were transferred while in this queue for the specified workgroup and date range.
Max Ans Min	mtAnswered	The maximum number of seconds a call was in the queue before it was answered.
Statistics Group	cName	The name of the statistics group that originated the statistics.

Record Selection Criteria:

{!StatsGroup.dIntervalStart} in {?StartDateTime} to {?EndDateTime} and

{!StatsGroup.cType} = "W" and

{!StatsGroup.cType} in {?StartStatGroup} to {?EndStatGroup} and

{!StatsGroup.SiteId} in {?StartSiteId} to {?EndSiteId}

Formulas:

All times are expressed as hh:mm:ss. This formula is used throughout the report to convert seconds to hh:mm:ss. This formula is external to the report file.

General Administrative

General Administrative

The General Administrative reports display the history of configuration changes made in Interaction Administrator and for Interaction Center. For more information, click a report under **General Administrative**.

(Supervisor) IA Change Notification History Report

This report displays the history of configuration changes you make in Interaction Administrator. Use this report as an audit trail for tracking these IA changes.

Parameters

You specify the range of dates and times, site IDs, classes, and users as parameters. You can specify all or part of a day in the time range. IC sorts this report by date in ascending order, and then by Time in ascending order.

(Supervisor) IC Change Notification History Report

This report displays the history of change notifications sent to the Admin Server of the Interaction Center. For example, anytime you delete or modify a user, or modify an IC Data Source, IC sends a change notification. Use this report as an audit trail for tracking these change notifications.

Note
 This report generates a great amount of data and you should only use it to track and audit specific issues within your IC system. By default, we set this report log to **inactive** (Active = No). If you wish to generate data for this report, you must set the report log to **active** (Active = Yes) in Interaction Administrator.

Parameters

You specify the range of dates and times, site IDs, and classes as parameters. You can specify all or part of a day in the time range. IC sorts this report by date in ascending order and then by Time in ascending order.

Survey Scoring Summary Report

The Survey Scoring Summary report shows the average survey score for agents during a date and time range. It also includes a list showing Average Score and Percentile per User for the selected survey. This report includes data from *completed* surveys.

Tip This report contains a bar graph. In order to make the chart easier to read, consider limiting the number of users selected at a time.

Parameters

Specify a range of dates and times, name of a survey, and users to include in the report.

Survey vs. Quality Scores Report

This report compares survey and quality scores from Interaction Recorder for a given agent. This report includes data from *completed* surveys.

Note This report is only for customers that are already using Interaction Recorder. The report will not run if the Recorder database is not found in the system. Report Log Tables from Interaction Recorder used for this report are: RecordingData and QuestionnaireForm.

Parameters

Specify a range of dates and times, name of a survey, and users to include in the report. In addition, choose whether or not to highlight differences in scores above a specific percentage.

IVR

IVR Audit Report

The IVR Audit report provides a raw listing of each interaction in the IVR during the specified time period, sorted first by Interaction ID and then by date/time. It also lists each node or menu (Event) (e.g., IVR menu, destination, etc.) and the exit code for each. An exit code of 0 indicates it passed through that menu successfully and any other exit code indicates a failure, such as the caller hung up, or the call was otherwise disconnected. This report is most useful for assisting with troubleshooting problems on particular calls in the system.

Parameters

You specify a range of dates/times, and site ID to include in the report. IC sorts this report by Interaction ID and then by date/time.

Report Log Tables

Interaction Administrator Unique Report Identifier

IVR History

IVR_AUDIT_NAME

Sample report

IVR Exit Path Report

The IVR Exit Path report lists each menu in each application and shows the number of calls that exited the IVR (auto attendant) at that level during the specified time period. It also shows related statistics, such as what percent of abandoned calls in that period were abandoned on each menu, the average amount of time the caller spent in that menu before abandoning, the total time all callers spent in that menu during that period, and the total percentage of time callers spent in that menu.

Parameters

You specify a range of dates/times, level, and site ID to include in the report. IC sorts this report by the Interaction Attendant application and menu names in the IVR.

IVR Summary Report

The IVR Summary report provides a summary of activity in each Interaction Attendant application in the specified level. For each day in the range, it shows: the total number of calls for the application; the percentage of that number out of all calls in the system; the average duration of each call in that application; the total time of those calls in the application; and how many times those calls went through the application menu, if more than once.

Parameters

You specify a range of dates/time access, exit paths, time in menus, and other statistics to help analyze IVR menu effectiveness. IC sorts this report by Interaction Attendant application names and then by date.

Queue/Wrap-up

Queue Period Statistics Agent Wrap Up Code by Queue Detail Report

This report enables a supervisor to see the wrap-up codes and related detailed statistics (number of interactions, average talk time, total talk time, average ACW, total ACW, and the number of supervisor requests) for each agent in each queue. A wrap-up code of "NS" mean the user did not specify a wrap-up code in the specified time period, even though wrap-up codes were enabled and offered. A wrap-up code of "-" (dash) indicates a regular interaction where no wrap-up code was offered, specified, or entered.

Parameters

You specify a range of dates, agents, queues and site IDs, to include in the report. IC sorts this report by Agent and then by Date, Queue Name, and then Wrap-up Codes.

10000000-100000000		1	00:00:00	00:00:00	1000000	0.00%	0	0	0.00%	00:00:00	0	0.00%

Report Element	Report Field or Value	Field or Value Description
Wrap-up code	chKey3	Wrap-up code descriptions (NS, Not Required, Existent Incident, and so on) are based on the column chkey3 of the tableWrapUpStats.
Interactions	nCompleted	The number of ACD Interactions
Avg Talk	AvgACDMinutes	The average number of minutes the agent spent on ACD calls for the date and time requested.
Total Talk	tTalkACD	The total number of minutes the agent spent on ACD for the date and time requested. Note tTalkACD is the time an interaction is active with an agent, including any Hold time with the agent during the interaction.
Avg ACW	AvgAcwMinutes	The average number of minutes the agent spent on ACW for the date and time requested.
Total ACW	tAcw	The total number of minutes the agent spent on ACW for the date and time requested.
Supervisor Requests	nSupervisorRequests	The number of ACD interactions where the agent requested supervisor assistance using the Supervisor request feature in the client.

Record Selection Criteria:

{QueueStats.dIntervalStart} in {?DateTime}

and

{QueueStats.cName} in {?Agent}

and

{QueueStats.cReportgroup} in {?Workgroup}

and

{QueueStats.SiteId} in {?SiteId}

and

{QueueStats.cHKey3}<>"*"

and

{QueueStats.cReportGroup}<>"*"

Formulas:

Column Interactions: QueueStats.ncompleted for the detail level

or Sum(QueueStats.ncompleted) for the totals by group

Avg Talk: QueueStats .tTalkAcid /QueueStats.ncompleted

or Sum(QueueStats .tTalkAcid)/Sum(QueueStats.ncompleted) for the groups

Total Talk: QueueStats.tTalkAcid

or Sum(QueueStats.tTalkAcid) for the groups

Avg ACW: QueueStats.tAcw/ QueueStats .nCompleted

or Sum(QueueStats.tAcw)/Sum(QueueStats .nCompleted) for the groups

Total ACW: QueueStats.tAcw

Or Sum(QueueStats.tAcw) for the groups

Supervisor Requests: QueueStats.nSupervisorRequests

Or Sum(QueueStats.nSupervisorRequests) for the groups

Legacy Historical Reports

Legacy Historical Reports

The Legacy Historical Reports category contains Crystal Reports migrated from Historical Reports.

Note

By default, the **Legacy Historical Reports** category is not visible. To display this category, from **Interaction Administrator**, in the **Report Management** node, select **Report Configuration**. On the **Report Configuration** page, in the **Categories** list, select **Legacy Historical Reports**, and click the icon **Edit the selected Category**. In the Edit Category dialog, select **Visible**.

(Supervisor) Agent Availability Detail Report

Use this report to determine how long you were in an **Available** state to take calls, and your status while you were unavailable. When you log in and log out of the Client, IC creates the logged in and logged out flags. States change when you change your status in the Client, and these changes do not affect the logged in and logged out flags.

Parameters

You specify a range of dates, times, and shift times to include in the report.

Click on the image below to view a sample of this report.

Agent	Program	Available	Average Per Line	Max Load	Utilization %	Year/Quar	Call Tot	Annual	Utilization	% Util	% Not Monitored
00000000000000000000	00000000000000000000	00000000000000000000	00000000000000000000	00000000000000000000	00000000000000000000	00000000000000000000	00000000000000000000	00000000000000000000	00000000000000000000	00000000000000000000	00000000000000000000

Report Element

Agent

Report Field or Value

UserID

Field or Value Description

The name of an IC user account (configured in Interaction

Administrator) in the specified range.

Date / Time	StatusDateTime	The date and time the New State status was set.
State	StatusKey State	The states or statuses that the agent entered within the specified date time range.
Duration	Sum(EndStatusTimeGMT – StatusDateTimeGMT) RowDuration	The number of minutes in this interval period.
Logged In	Sum(EndStatusTimeGMT – StatusDateTimeGMT) FlagLogginLogout	The total time, within the specified parameters, that the agent was logged into the system.
ACD Logged In	Sum(EndStatusTimeGMT – StatusDateTimeGMT) FlagACDLoggedIn	The total time, within the specified parameters, that the agent was logged into an ACD flagged state and the Do Not Disturb flag was not indicated.
Non ACD Logged In	Sum(EndStatusTimeGMT – StatusDateTimeGMT)	The total time, within the specified parameters, that the agent was logged into the system, but not available for ACD calls and the Do Not Disturb flags was not indicated. This would include states such as Available, No ACD and Available, Forward.
DND	Sum(EndStatusTimeGMT – StatusDateTimeGMT) FlagDND	The total time, within the specified parameters, that the agent was unavailable to receive a call. This includes all the states where the Do Not Disturb flag is indicated.
ACW	Sum(EndStatusTimeGMT – StatusDateTimeGMT) FlagACW	The total time, within the specified parameters, that the agent was completing after call work or wrap up activities. This includes all states flagged as ACW states.
Flags Logged In	LoggedIn, ACDLoggedIn, StatusDND, and StatusACW	An indicator as to how the agent's activities were viewed by the system. The flags are displayed based on the

ACD Logged In		value of the fields. If the value of the field is 1 or true, then an indicator will be displayed. It is possible for states to have more than one flag indicated.
DND		
ACW		
Non ACD Logged In		The logged in flag will display the words Logged In or Logged Out depending on the value of the LoggedIn field.
Site	SiteID	The agent's home location identifier.

Record selection criteria for this report includes:

{AgentActivityLog.UserId} in {?StartUser} to {?EndUser} and
 {AgentActivityLog.StatusDateTime} in {?StartStatusDateTime} to {?EndStatusDateTime} and
 {@StatusTime} in {?ShiftStartTime} to {?ShiftEndTime} and
 {AgentActivityLog.SiteId} >= {?StartSiteId} and {AgentActivityLog.SiteId} <= {?EndSiteId}

Formula for Flags:

IC calculates the flags by using logic as to what flags are marked as true and false, and the combination of the flags is what drives the display information.

```
if {AgentActivityLog.ACDLoggedIn}=TRUE then FLAG :="(ACD)";
if {AgentActivityLog.StatusDnd}=TRUE then FLAG :="(ACD)"And "(DND)";
if {AgentActivityLog.StatusAcw}=TRUE then FLAG :="(ACD)"+"(DND)" + "(ACW)";
if {AgentActivityLog.LoggedIn} = TRUE and {AgentActivityLog.ACDLoggedIn} = FALSE and
{AgentActivityLog.StatusDnd} = FALSE and {AgentActivityLog.StatusAcw} = FALSE then FLAG:= "(Non ACD)";
```

Shift Parameters:

Start / end dates parameters control the overall range of the data, and the shift parameters select a range of data within each day. For example, by entering the parameters **June 1, 1900 to June 7, 1900**, you select all rows within this range. Add a shift parameter of 09:00 to 17:00 and you will ignore any row in your query that did not have a time within this range. This allows shift activity to be summarized for a range of days, months, or even years.

(Supervisor) Agent Availability Summary Report

Use this report to determine how long users were in an **Available** state to take calls, and each user's status while he or she was unavailable. This is a summary version of the detail report. The report is summarized by date to show how much time an agent logged in each state. This report gives the user a general overview of each state entered for each day and the duration of these states. IC sorts this report by IC user IDs.

Parameters

You specify a range of users, dates, times, site IDS and shift times to include in the report.

Note

If an agent logs into the system and does not change his or her status on that particular date, the value for this state is logged in or **0**. To represent these values correctly for this situation, we now display the actual state, either **logged in** or **logged out**.

Report Log Tables Interaction Administrator Unique Report Identifier

AgentActivityLog SUPER_AGENT_AVAIL_SUMMARY

Sample report

Click on the image below to view a sample of this report.

The screenshot shows a 'Sample Report' from Genesys. It includes a table with columns for 'Agent', 'Status', 'Program Available', 'Status Per Line', 'Max Agent Duration', 'Availability', 'Hold/Wait', 'Call Out', 'Program Duration', 'Min/Max Status', '% Idle/Busy', and '% Not Available'. The data rows show various agent statuses and their corresponding metrics over time.

Report Element	Report Field or Value	Field or Value Description
Agent	UserId	The name of an IC user account in the specified range.
Logged In	Sum(EndStatusTimeGMT – StatusDateTimeGMT) UserLoggedIn	The total minutes, within the scope of the specified time range, that the user was logged into the system. Note: This value is derived from the calculations in the UserLoggedIn formula which is based on agent status.
ACD Logged In	Sum(EndStatusTimeGMT – StatusDateTimeGMT)	The total time, within the specified parameters, that the agent was logged into an ACD flagged state and the Do Not Disturb flag was not indicated.
Non ACD Logged In	Sum(EndStatusTimeGMT – StatusDateTimeGMT)	The total time, within the specified parameters, that the agent was logged into the system, but not available for ACD calls and the Do Not Disturb flags was not indicated. This would include

		states such as Available, No ACD and Available, Forward.
DND	Sum(EndStatusTimeGMT – StatusDateTimeGMT)	The total time, within the specified parameters, that the agent was unavailable to receive a call. This includes all the states were the Do Not Disturb flag is indicated.
ACW	Sum(EndStatusTimeGMT – StatusDateTimeGMT) UserAcw	The total time, within the specified parameters, that the agent was completing after call work or wrap up activities. This includes all states flagged as ACW states
State	StatusKey	The states or statuses that the agent entered within the specified date time range.
Flags	LoggedIn, ACDLoggedIn, StatusDND, and StatusACW StatusFlags	An indicator as to how the agent’s activities were viewed by the system. The flags are displayed based on the combination of the values for each of the flag fields. Logged In flag set to true and all others to false and the time is set to Non ACD. Logged In and ACD Logged In set to true and the flag is set to ACD. If the Logged In and the DND are true, then the flag is set to DND. If the Logged In, DND, and the ACW are set to true, then the flag is set to DND and ACW.
Duration	Sum(EndStatusTimeGMT – StatusDateTimeGMT) Duration	The total time, within the specified parameters, that the agent spent in each state.
Site	SiteID	The agent’s home site location identifier.
First Activity	Min(StatusDateTime)	The agents first activity of the day.
Last Activity	Max(StatusDateTime)	The agents last activity of the day.
Total Time	Max(StatusDateTime) – Min(StatusDateTime)	The total amount of time from the agents first activity to their last activity for the day

Record selection criteria:

{AgentActivityLog.UserId} in {?StartUser} to {?EndUser} and

{AgentActivityLog.StatusDateTime} in {?StartDateTime} to {?EndDateTime} and

{@StatusTime} in {?ShiftStartTime} to {?ShiftEndTime} and

{AgentActivityLog.ChangedLoggedIn} <> 1 // Don't include login / logout rows. It cause the duration to get doubled up. and

{AgentActivityLog.SiteId} in {?StartSiteId} to {?EndSiteId}

Formula for Flags:

IC calculates the flags by using logic as to what flags are marked as true and false, and the combination of the flags is what drives the display information.

if {AgentActivityLog.ACDLoggedIn}=TRUE then FLAG :="(ACD)";

if {AgentActivityLog.StatusDnd}=TRUE then FLAG :="(ACD)"And "(DND)";

if {AgentActivityLog.StatusAcw}=TRUE then FLAG :="(ACD)"+"(DND)" + "(ACW)";

if {AgentActivityLog.LoggedIn} = TRUE and {AgentActivityLog.ACDLoggedIn} = FALSE and {AgentActivityLog.StatusDnd} = FALSE and {AgentActivityLog.StatusAcw} = FALSE then FLAG:= "(Non ACD)";

Shift Parameters - Start / end dates parameters control the overall range of the data, and the shift parameters select a range of data within each day. For example, by entering the parameters **June 1, 1900 to June 7, 1900**, you select all rows within this range. Add a shift parameter of 09:00 to 17:00 and you will ignore any row in your query that did not have a time within this range. This allows shift activity to be summarized for a range of days, months, or even years.

(Supervisor) Number Search Report

This report allows you to search all users who have called or received calls from a specific phone number. The Number Search Report is a tool for managers and system administrators who wish to track down the callers of specific numbers. IC sorts this report by IC user name.

Parameters

You specify a number to search for, a range of dates, the start and end time of day (or shift), account code, and the number to search, to include in the report. The number to search must contain the number in the format +99999999 to result in a successful search. You can use the country code to search for country-specific numbers. For example, if you wish to run a report for USA only, change the parameter to +1999999999 (the '1' represents the country code, which is the USA). You may change this parameter in Interaction Administrator or at runtime.

Notes

- If you enter a range for one of these specific parameters (caller IDs, dialed numbers,

DNIS, and user IDs), and a record included in this range has a null value for any one of these parameters, then this record will be excluded on the report. It is not possible to include these records at this time.

- The use of wildcards for the representation of variable numbers is supported . You can enter the range as a wildcard, e.g., dialed number range +13178?????? to 13179?????.

Report Element

Report Field or Value

Field or Value Description

User

LocalUserId

The name of an IC user account included in the range of users for a report.

Extension

LocalNumber

The extension of the IC user.

Date

ConnectedDate

The date for each call from this Caller ID number.

Time

ConnectedDate

The time each call connected to or from this number.

Direction

CallDirection

This field is Inbound for calls placed to the IC user / extension, and Outbound for calls placed from the IC user / extension.

Number	RemoteNumber or RemoteNumberFmt	The external phone number or extension of the calling party. The call contains the number of a calling party if caller ID is available. In the case where RemoteNumberFmt is blank, then IC uses the RemoteNumber with an * added to the end of the number. If both the Remote NumberFmt and the RemoteNumber are blank, then the RemoteCallerID is used with two ** added to the end of the number. If all these are blank, then N / A is displayed on the report. A null or empty value is possible if the call was an Intercom call that was terminated before the Remote party was specified.
Remote Name	RemoteName	The name of the party that called the IC user, if the name is provided with the call.
Acct Code	AccountCode	The account code assigned to the call
(Min) Duration	Duration hh:mm:ss	The duration of this call. Connected time to disconnected time. This value is calculated using the GMT Times so it is not affected by changes in time due to daylight savings
(Min) Hold Time	Hold Time hh:mm:ss	The time this call was on hold.
Total Hold Time (summary)	Sum(HoldDurationSeconds)	The number of seconds that all Caller ID calls were on hold, on the given date(s).
Total Calls (summary)	CallDetail.ConnectedTime	The total number of calls to the specified number in the given ranges.
Total Duration (summary)	Sum(CallDurationSeconds)	The total time for all calls to the specified number in the given ranges.

Record selection criteria for this report includes:

{CallDetail.ConnectedDate} in {?StartDateTime} to {?EndDateTime} and

{CallDetail.RemoteNumber} in {?StartCallerID} to {?EndCallerID} and

{CallDetail.LocalUserId} in {?StartUser} to {?EndUser} and

{CallDetail.SiteId} in {?StartSiteId} to {?EndSiteId}

(Supervisor) User Call Detail Report

The (Supervisor) User Call Detail Report displays all calls for one or more users for a given time period. The report is designed to give a supervisor a report of each user's calls. A supervisor can use this report to audit an agent's productivity. System administrators may choose to use the User Call Detail Report to bill users and departments for their long distance calls.

Note

The only difference between this report and the User Call Detail for Current User report is the range of users. The Supervisor version can report on a range of users and the User version generates the same data for the current user.

Parameters

You specify a range of dates, times, and site ID to include in the report. IC sorts this report by users.

Notes

- If you enter a range for one of these specific parameters (caller IDs, dialed numbers, DNIS, and user IDs), and a record included in this range has a null value for any one of these parameters, then this record will be excluded on the report. It is not possible to include these records at this time.

- The use of wildcards for the representation of variable numbers is supported . You can enter the range as a wildcard, e.g., dialed number range +13178?????? to 13179??????.

The table contains 10 rows of data.

<u>Report Element</u>	<u>Report Field or Value</u>	<u>Field or Value Description</u>
User	LocalUserId	The name of an IC user account included in the range of users for a report.
Extension	LocalNumber	The extension of the IC user.
Date / Time	ConnectedDate	The date and time for each day included in the range for this the report.
In / Out	CallDirection	The direction of each call: either Inbound or Outbound.
Remote Number	RemoteNumber or RemoteNumberFmt	The external phone number or extension of the calling party. The call contains the number of a calling party if caller ID is available. In the case where RemoteNumberFmt is blank, then IC uses the RemoteNumber with an * added to the end of the number. If both the Remote NumberFmt and the RemoteNumber are blank, then the RemoteCallerID is used with two ** added to the end of the number. If all these are blank, then N / A is displayed on the report. A null or empty value is possible if the call was an Intercom call that was terminated before the Remote party was specified.
Remote Name	RemoteName	The name of the party that called (for Inbound calls). If Caller ID or a name lookup is not available, this could be External . The name of the called party, if known (for Outbound calls). In some case, City and State may appear as remote name.
Acct Code	AccountCode	The account code assigned to the call.
Call Duration	Call Duration hh:mm:ss	The total time the call was in the system in hours, minutes, and seconds.
Hold Time	Hold Duration Seconds	The total time this call was on hold.

Number of Calls	Count of ConnectedDate	The total number of calls the current user placed or received during the specified date range.
Avg. Duration (Min)	Sum(CallDurationSeconds) / Count (ConnectedDate)	The average time the current user spent on all inbound and outbound calls during the specified date range.
Number Out Calls	Count of CallDirection=Outbound	The total number of outbound calls the current user placed during the specified date range.
Number of Incoming Calls	Count of CallDirection=Inbound	The total number of incoming calls the current user received during the specified date range.

Report Element

Report Field or Value

Field or Value Description

User

LocalUserId

The name of the IC user accounts specified in the range.

Extension

LocalNumber

The extension of the IC user.

Date

ConnectedDate

The date for each day included in the date range for this the report.

Total Calls

Count of ConnectedDate

The total number of calls the user placed or received on this date.

Total Duration

Sum(CallDurationSeconds)

Displays the total number of seconds for all calls received from a Caller ID number, on the given date(s).

Average Duration

Sum(CallDurationSeconds) / Count(ConnectedDate)

Displays the average number of seconds for all calls from this Caller ID number, on the given date(s).

Outbound Calls

Count of CallDirection=Outbound

The total number of outbound calls a user placed on this date.

Outbound Duration

Sum(CallDurationSeconds) where CallDirection=Outbound

The number of minutes the current user spent on outbound calls during the

specified range.

Avg. Outbound Duration	Sum(CallDurationSeconds) / Count (ConnectedDate)where CallDirection=Outbound	The average number of minutes the current user spent on outbound calls during the specified range.
Inbound Calls	Count of CallDirection=Inbound	The total number of incoming calls a user received on this date.
Inbound Duration	Sum(CallDurationSeconds) where CallDirection=Inbound	The number of minutes the current user spent on inbound calls during the specified range.
Avg. Inbound Duration	Sum(CallDurationSeconds) / Count (ConnectedDate) where CallDirection=Inbound	The average number of minutes the current user spent on inbound calls during the specified range.
Number of Calls (summary)	Count of ConnectedDate	The total number of calls each user placed or received during the specified date range.
Average Duration (Summary)	Sum(CallDurationSeconds) / Count(ConnectedDate)	Displays the average number of seconds for all calls from this Caller ID number, on the given date(s).
Number Out Calls (summary)	Count of CallDirection=Outbound	The total number of outbound calls a user placed during the specified date range.
Avg. Outbound Duration (summary)	Avg of CallDurationSecond / 60 where CallDirection=Outbound	The average number of minutes a user spent on all outbound calls during the specified range.
Avg. Inbound Duration (summary)	Avg of CallDurationSecond / 60 where CallDirection=Inbound	The average number of minutes a user spent on all incoming calls during the specified date range.

Record Selection Criteria:

{CallDetail.ConnectedDate} in {?StartDateTime} to {?EndDateTime} and

{CallDetail.LocalUserId} in {?StartUser} to {?EndUser} and

{CallDetail.SiteId} in {?StartSiteId} to {?EndSiteID}

Agent Availability Detail Report

Use this report to determine how long you were in an **Available** state to take calls, and your status while you were unavailable. When you log in and log out of the Client, IC creates the logged in and logged out flags. States change when you change your status in the Client, and these changes do not affect the logged in and logged out flags.

Parameters

You specify a range of dates, times, and shift times to include in the report.

Report Log Tables

Sample report

Click on the image below to view a sample of this report.

The screenshot shows a 'Sample Report' from GENESYS. The report title is 'AGENT AVAILABILITY REPORT'. The report includes a table with columns for 'Group', 'StatusKey', 'StatusDate', 'StatusTime', 'StatusDuration', 'StatusKey', 'Status', 'StatusDuration', 'StatusKey', 'Status', 'StatusDuration', 'StatusKey', 'Status', 'StatusDuration'. The table contains data for various agents and their availability status over time.

Report Element

Report Field or Value

Field or Value Description

Agent

UserID

The name of an IC user account (configured in Interaction Administrator) in the specified range.

Date / Time

StatusDateTime

The date and time the New State status was set.

State

StatusKey
State

The states or statuses that the agent entered within the specified date time range.

Duration

Sum(EndStatusTimeGMT – StatusDateTimeGMT)
RowDuration

The number of minutes in this interval period.

Logged In

Sum(EndStatusTimeGMT – StatusDateTimeGMT)

The total time, within the specified parameters, that the agent was logged into the system.

	FlagLoginLogout	
ACD Logged In	Sum(EndStatusTimeGMT – StatusDateTimeGMT) FlagACDLoggedIn	The total time, within the specified parameters, that the agent was logged into an ACD flagged state and the Do Not Disturb flag was not indicated.
Non ACD Logged In	Sum(EndStatusTimeGMT – StatusDateTimeGMT)	The total time, within the specified parameters, that the agent was logged into the system, but not available for ACD calls and the Do Not Disturb flag was not indicated. This would include states such as Available, No ACD and Available, Forward.
DND	Sum(EndStatusTimeGMT – StatusDateTimeGMT) FlagDND	The total time, within the specified parameters, that the agent was unavailable to receive a call. This includes all the states where the Do Not Disturb flag is indicated.
ACW	Sum(EndStatusTimeGMT – StatusDateTimeGMT) FlagACW	The total time, within the specified parameters, that the agent was completing after call work or wrap up activities. This includes all states flagged as ACW states.
Flags Logged In ACD Logged In DND ACW Non ACD Logged In	LoggedIn, ACDLoggedIn, StatusDND, and StatusACW	An indicator as to how the agent's activities were viewed by the system. The flags are displayed based on the value of the fields. If the value of the field is 1 or true, then an indicator will be displayed. It is possible for states to have more than one flag indicated. The logged in flag will display the words Logged In or Logged Out depending on the value of the LoggedIn field.
Site	SiteID	The agent's home location identifier.

Record selection criteria for this report includes:

{AgentActivityLog.UserId} in {?StartUser} to {?EndUser} and

{AgentActivityLog.StatusDateTime} in {?StartStatusDateTime} to {?EndStatusDateTime} and

{@StatusTime} in {?ShiftStartTime} to {?ShiftEndTime} and

{AgentActivityLog.SiteId} >= {?StartSiteId} and {AgentActivityLog.SiteId} <= {?EndSiteId}

Formula for Flags:

IC calculates the flags by using logic as to what flags are marked as true and false, and the combination of the flags is what drives the display information.

if {AgentActivityLog.ACDLoggedIn}=TRUE then FLAG :="(ACD)";

if {AgentActivityLog.StatusDnd}=TRUE then FLAG :="(ACD)"And "(DND)";

if {AgentActivityLog.StatusAcw}=TRUE then FLAG :="(ACD)"+"(DND)" + "(ACW)";

if {AgentActivityLog.LoggedIn} = TRUE and {AgentActivityLog.ACDLoggedIn} = FALSE and {AgentActivityLog.StatusDnd} = FALSE and {AgentActivityLog.StatusAcw} = FALSE then FLAG:= "(Non ACD)";

Shift Parameters:

Start / end dates parameters control the overall range of the data, and the shift parameters select a range of data within each day. For example, by entering the parameters **June 1, 1900** to **June 7, 1900**, you select all rows within this range. Add a shift parameter of 09:00 to 17:00 and you will ignore any row in your query that did not have a time within this range. This allows shift activity to be summarized for a range of days, months, or even years.

Agent Availability Summary Report

Use this report to determine how long you were in an **Available** state to take calls, and your status while you were as unavailable. This is a summary version of the detail report. It is summarized by day to show how much time an agent logged in each state. This report gives the user a general overview of each state entered for each day and the duration of these states.

Parameters

You specify a range of dates, times, and shift times to include in the report.

Note

If an agent logs into the system and does not change his or her status on that particular date, the value for this state is logged in or **0**. To represent these values correctly for this situation, we now display the actual state, either **logged in** or **logged out**.

Report Element

Report Field or Value

Field or Value Description

Agent

UserID

The name of an IC user account in the specified range.

Logged In

Sum(EndStatusTimeGMT – StatusDateTimeGMT)
UserLoggedIn

The total minutes, within the scope of the specified time range, that the user was logged into the system. Note: This value is derived from the calculations in the UserLoggedIn formula which is based on agent status.

ACD Logged In

Sum(EndStatusTimeGMT – StatusDateTimeGMT)

The total time, within the specified parameters, that the agent was logged into an ACD flagged state and the Do Not Disturb flag was not indicated.

Non ACD Logged In

Sum(EndStatusTimeGMT – StatusDateTimeGMT)

The total time, within the specified parameters, that the agent was logged into the system, but not available for ACD calls and the Do Not Disturb flags was not indicated. This would include states such as Available, No ACD and Available, Forward.

DND

Sum(EndStatusTimeGMT – StatusDateTimeGMT)

The total time, within the specified parameters, that the agent was unavailable to receive a call. This includes all the states where the Do Not Disturb flag is indicated.

ACW

Sum(EndStatusTimeGMT – StatusDateTimeGMT)
UserAcw

The total time, within the specified parameters, that the agent was completing after call work or wrap up activities. This includes all states flagged as ACW states.

State

StatusKey

The states or statuses that the agent

entered within the specified date time range.

Flags	LoggedIn, ACDLoggedIn, StatusDND, and StatusACW StatusFlags	An indicator as to how the agent's activities were viewed by the system. The flags are displayed based on the combination of the values for each of the flag fields. Logged In flag set to true and all others to false and the time is set to Non ACD. Logged In and ACD Logged In set to true and the flag is set to ACD. If the Logged In and the DND are true, then the flag is set to DND. If the Logged In, DND, and the ACW are set to true, then the flag is set to DND and ACW.
Duration	Sum(EndStatusTimeGMT – StatusDateTimeGMT) Duration	The total time, within the specified parameters, that the agent spent in each state.
Site	SiteID	The agent's home site location identifier.
First Activity	Min(StatusDateTime)	The agents first activity of the day.
Last Activity	Max(StatusDateTime)	The agents last activity of the day.
Total Time	Max(StatusDateTime) – Min(StatusDateTime)	The total amount of time from the agents first activity to their last activity for the day

Record selection criteria:

{AgentActivityLog.UserId} in {?StartUser} to {?EndUser} and
{AgentActivityLog.StatusDateTime} in {?StartDateTime} to {?EndDateTime} and
{@StatusTime} in {?ShiftStartTime} to {?ShiftEndTime} and
{AgentActivityLog.ChangedLoggedIn} <> 1 // Don't include login / logout rows. It cause the duration to get doubled up. and
{AgentActivityLog.SiteId} in {?StartSiteId} to {?EndSiteId}

Formula for Flags:

IC calculates the flags by using logic as to what flags are marked as true and false, and the combination of the flags is what drives the display information.

if {AgentActivityLog.ACDLoggedIn}=TRUE then FLAG :="(ACD)";
if {AgentActivityLog.StatusDnd}=TRUE then FLAG :="(ACD)"And "(DND)";

if {AgentActivityLog.StatusAcw}=TRUE then FLAG :="(ACD)"+"(DND)" + "(ACW)";

if {AgentActivityLog.LoggedIn} = TRUE and {AgentActivityLog.ACDLoggedIn} = FALSE and {AgentActivityLog.StatusDnd} = FALSE and {AgentActivityLog.StatusAcw} = FALSE then FLAG:= "(Non ACD)";

Shift Parameters:

Start / end dates parameters control the overall range of the data, and the shift parameters select a range of data within each day. For example, by entering the parameters **June 1, 1900** to **June 7, 1900**, you select all rows within this range. Add a shift parameter of 09:00 to 17:00 and you will ignore any row in your query that did not have a time within this range. This allows shift activity to be summarized for a range of days, months, or even years.

Agent Availability with Activation Report

This report is identical to the (Supervisor) Agent Availability Detail Report, except this one adds a summary of agent activation changes at the end of the report. Supervisors use this report to view and track very detailed information with regards to the agents status activity. Use this report to determine how long users were in an **Available** state to take calls, and each user’s status while he or she was unavailable. When you log in and log out of the Client, IC creates the logged in and logged out flags. States change when you change your status in the Client, and these changes do not affect the logged in and logged out flags. This report is sorted by Site and IC user names.

The end of the report includes a summary of all of the agents who were activated or deactivated in an ACD queue included in the report parameters. Only those agents who were activated or deactivated from a queue during this period are listed.

Parameters

You specify a range of users, dates, times, site IDs, and shift times to include in the report.

The screenshot shows a 'Sample Report' header with the GENESYS logo. Below the header is a table with the following columns: Site, Agent, Program, Activation, Max Avail, Utilization, Total Calls, Call Rate, Program, Max Calls, % Avail, % Not Reached. The table contains several rows of data, including a summary row for 'Agent' and multiple rows for 'AgentQueueActivationHistoryLog' and 'AgentActivityLog'.

<u>Report Element</u>	<u>Report Field or Value</u>	<u>Field or Value Description</u>
Agent	UserId	The name of an IC user account (configured in Interaction Administrator) in the specified range.
Date / Time	StatusDateTime	The date and time the New State status was set.
State	StatusKey State	The states or statuses that the agent entered within the specified date time range.
Duration	Sum(EndStatusTimeGMT – StatusDateTimeGMT) RowDuration	The number of minutes in this interval period.
Logged In	Sum(EndStatusTimeGMT – StatusDateTimeGMT) FlagLogginLogout	The total time, within the specified parameters, that the agent was logged into the system.
ACD Logged In	Sum(EndStatusTimeGMT – StatusDateTimeGMT) FlagACDLoggedIn	The total time, within the specified parameters, that the agent was logged into an ACD flagged state and the Do Not Disturb flag was not indicated.
Non ACD Logged In	Sum(EndStatusTimeGMT – StatusDateTimeGMT)	The total time, within the specified parameters, that the agent was logged into the system, but not available for ACD calls and the Do Not Disturb flags was not indicated. This would include states such as Available, No ACD and Available, Forward.
DND	Sum(EndStatusTimeGMT – StatusDateTimeGMT) FlagDND	The total time, within the specified parameters, that the agent was unavailable to receive a call. This includes all the states were the Do Not Disturb flag is indicated.
ACW	Sum(EndStatusTimeGMT – StatusDateTimeGMT) FlagACW	The total time, within the specified parameters, that the agent was completing after call work or wrap up activities. This includes all states flagged as ACW states
Flags: Logged In ACD Logged In DND	LoggedIn, ACDLoggedIn, StatusDND, and StatusACW	An indicator as to how the agent’s activities were viewed by the system. The flags are displayed based on the value of the fields. If the value of the field is 1 or true, then an indicator will

ACW
Non ACD Logged In

be displayed. It is possible for states to have more than one flag indicated. The logged in flag will display the words Logged In or Logged Out depending on the value of the LoggedIn field.

Site SiteID

The agent's home location identifier.

Record selection criteria:

{AgentActivityLog.UserId} in {?Agent} and
{AgentActivityLog.StatusDateTime} in {?DateTime} and
{@StatusTime} in {?ShiftTime} and
{AgentActivityLog.SiteId} in {?SiteId}

Formula for Flags:

IC calculates the flags by using logic as to what flags are marked as true and false, and the combination of the flags is what drives the display information.

```
if {AgentActivityLog.ACDLoggedIn}=TRUE then FLAG :="(ACD)";  
if {AgentActivityLog.StatusDnd}=TRUE then FLAG :="(ACD)"And "(DND)";  
if {AgentActivityLog.StatusAcw}=TRUE then FLAG :="(ACD)"+"(DND)" + "(ACW)";  
if {AgentActivityLog.LoggedIn} = TRUE and {AgentActivityLog.ACDLoggedIn} = FALSE and  
{AgentActivityLog.StatusDnd} = FALSE and {AgentActivityLog.StatusAcw} = FALSE then FLAG:= "(Non  
ACD)";
```

Shift Parameters - Start / end dates parameters control the overall range of the data, and the shift parameters select a range of data within each day. For example, by entering the parameters **June 1, 1900 to June 7, 1900**, you select all rows within this range. Add a shift parameter of 09:00 to 17:00 and you will ignore any row in your query that did not have a time within this range. This allows shift activity to be summarized for a range of days, months, or even years.

Agent Performance Detail for Queue Report

This report is for supervisors who want to analyze agents and their interaction activity at a detail level. You can select agents individually or by queue. It shows a summary of activity for each agent, followed by the queue detail. Specifically, it shows the number of ACD interactions, after call work, and time available for ACD interactions. By default, this report shows detail by day, but you can show detail down to the smallest time range, interval. IC sorts this report by agent, date, and queue.

Note

IC no longer queries information based on workgroup membership for this report. IC now only queries agents that are associated with the active distribution queue.

This report has Flexible Fields. By default, IC displays Disconnect in the first flexible field, but you can easily change this flexible field in Interaction Administrator, to show the other values:

- Local Disconnect = 1
- Flowed Out = 2
- Grabbed = 3 (Note, this field is still available on this report, but IC does not currently use it.)
- Entered = 4
- Transferred = 5
- Ring Time = 6

The second flexible field shows Service Level 1 by default. You may change this default to show these other values:

- % Service Level 1 = 1
- % Service Level 2 = 2
- % Service Level 3 = 3
- % Service Level 4 = 4
- % Service Level 5 = 5
- % Service Level 6 = 6
- Load Ratio = 7
- Load - Hold Ratio = 8

Parameters

You specify a range of agents, dates, times, site IDs, queues and shifts to report on.

Report Log Tables Interaction Administrator Unique Report Identifier

Sample report

Click on the image below to view a sample of this report.

The screenshot shows a 'Sample Report' header with the GENESYS logo. Below the header is a table with the following columns: Agent, Queue, Agent Available, Average Per Line, Max Hold Duration, Abandonment %, Wait/Call, Call Wait (with sub-columns # and %), Agent Call Duration, Max Hold Duration, % Utilized, and % Not Monitored. The table contains several rows of data, including a 'Group' row and multiple rows for 'Agent' and 'Queue' performance metrics.

<u>Report Element</u>	<u>Report Field or Value</u>	<u>Field or Value Description</u>
{none}	cName	The name of an agent in the specified range.
Date	dIntervalStart	The date or time in the specified range. The date defaults to show the information by day. If you wish to see interval, hour, week, day of week, month or year, you need to make report modifications.
{none}	cReportGroup	The name of the queue for the selected agent. All queues in the summary information is represented in the database by an asterisk.
{none}	InteractionType	This field is reserved for use in a future release. This is the type of ACD interaction. Possible values are calls, chats and emails.
Int	nAnsweredACD	The number of ACD interactions that were answered.
Avg. Talk	tTalkACD / nAnsweredACD	The average amount of time spent on the incoming ACD interactions. The total agent incoming ACD interactions time divided by the number of ACD interactions answered for the specified range.
Total Talk	tTalkACD	The amount of time spent on the incoming ACD interactions. The agents incoming ACD interactions time. Note tTalkACD is the time an interaction is active with an agent, including any Hold time with the agent during the interaction.
Avg ACW	tACW / nAnsweredACD	The average amount of time the agent spent on After Call Work. The total amount of time the agents spent of after call work divided by the total number of ACD calls answered for the

		specified range.
Total ACW	tACW	The amount of time the agent spent on After Call Work. The total amount of time the agents spent of after call work.
Avg Speed Ans	$\frac{tAnsweredACD}{nAnsweredACD}$	The average amount of time an interaction spent alerting before it was answered by the agent. The total amount of time the interactions were alerting the agents divided by the total number of ACD interactions answered for the specified range.
Disconnect	nLocalDisconnectACD	Default Flexible Field The default for this flexible field is Disconnect. The number of ACD interactions that were disconnected locally (i.e., by an IC user, not the external party)
Flow Out	nFlowOutACD	Flexible Field - The number of items that were removed from this queue without having been in a Client_Connected or Inactive state (e.g., Alerting call went to Voice Mail, an agent did not answer a call which went to the next available agent, etc.)
Entered	nEnteredACD	Flexible Field - The number of interactions that entered the queue.
Transfer	nTransferredACD	Flexible Field - The number of interactions that were transferred while in this queue. Transfers from statistics group to statistics group will not show up on this count, and will only show as an nFlowOutACD.
Ring Total	tAlertedACD	Flexible Field - The amount of time ACD interactions spent in alerting the agent.
% Srv Level 1	$\frac{(nAnsweredACDSvcLvl1}{nAnsweredACD)} * 100$	Default Flexible Field The default for this flexible field is Service Level 1. The percentage of interactions that were answered within the first service level. You setup the service level interval in Interaction Administrator. Please keep in mind you setup these service levels for queue expectations, not agents, although IC applies the same service level settings to agents. For example, if IC sends the caller to voice mail or transfers the caller to another available age, there may be no information
	Levels 1 through 6: The total number of ACD interactions that were answered within the selected service level divided by the total number of ACD interactions that were	

	answered for the specified range. This number is multiplied by 100 to get the percentage.	above % service level 3.
% Srv Level 2	$(n\text{AnsweredACDSvcLv}2 / n\text{AnsweredACD}) * 100$	Flexible Field - The percentage of interactions that were answered within the second service level. The default second service level is 20 seconds.
% Srv Level 3	$(n\text{AnsweredACDSvcLv}3 / n\text{AnsweredACD}) * 100$	Flexible Field - The percentage of interactions that were answered within the third service level.
% Srv Level 4	$(n\text{AnsweredACDSvcLv}4 / n\text{AnsweredACD}) * 100$	Flexible Field - The percentage of interactions that were answered within the fourth service level.
% Srv Level 5	$(n\text{AnsweredACDSvcLv}5 / n\text{AnsweredACD}) * 100$	Flexible Field - The percentage of interactions that were answered within the fifth service level.
% Srv Level 6	$(n\text{AnsweredACDSvcLv}6 / n\text{AnsweredACD}) * 100$	Flexible Field - The percentage of interactions that were answered within the sixth service level.
Load Ratio	$t\text{TalkACD} / t\text{AgentOnACDCall}$	Flexible Field - The ratio of total ACD talk time to the amount of time actually worked during the selected interval. This ratio is most meaningful when agents are allowed to handle multiple interactions at the same time.
Load Hold Ratio	$t\text{TalkACD} / (t\text{AgentOnACDCall} + t\text{AgentInACW})$ hold time	Flexible Field - The ratio of total ACD talk time to the amount of time actually worked hold time during the selected interval. This ratio is most meaningful when agents are allowed to handle multiple interactions at the same time.
In Ints	$(n\text{ExternToInternCalls} - n\text{ExternToInternACDCalls}) + (n\text{InternToInternCalls} - n\text{InternToInternACDCalls})$	The number of incoming non-ACD interactions.
Avg In Talk	$((t\text{ExternToInternCalls} - t\text{ExternToInternACDCalls}) + (t\text{InternToInternCalls} - t\text{InternToInternACDCalls})) / \text{Incoming Interactions}$	The average amount of time spent on incoming non-ACD interactions.

Total Time In	$(t_{\text{ExternToInternCalls}} - t_{\text{ExternToInternACDCalls}}) + (t_{\text{InternToInternCalls}} - t_{\text{InternToInternACDCalls}})$	The total amount of time spent on incoming non-ACD interactions.
Out Ints	$n_{\text{InternToExternCalls}} - n_{\text{InternToExternACDCalls}}$	The number of outgoing non-ACD interactions.
Avg Out Talk	$(t_{\text{InternToExternCalls}} - t_{\text{InternToExternACDCalls}}) / \text{Outgoing Interactions}$	The average amount of time spent on outgoing non-ACD interactions.
Total Time Out	$t_{\text{InternToExternCalls}} - t_{\text{InternToExternACDCalls}}$	The total amount of time spent on outgoing non-ACD interactions.

Record selection criteria for this report includes:

{|AgentQueueStats.dIntervalStart} in {?StartDateTime} to {?EndDateTime}}and
{|AgentQueueStats.cType}="A" and
{|AgentQueueStats.cName} in {?StartStatGroup} to {?EndStatGroup} and
{|AgentQueueStats.cReportGroup} in {?StartReportGroup} to {?EndReportGroup} and
{|AgentQueueStats.SiteId} in {?StartSiteId} to {?EndSiteID}

Agent Performance Detail for Queue by Date by Interaction Type Report

The Agent Performance Detail for Queue by Date by Interaction Type report displays a detail of agent information by interaction type for a specified date/time range for selected agents. You can select the agents individually or by a workgroup. This report shows the summary for each agent by queue and by day. It shows the number of ACD interactions, after call work, and time available for ACD interactions.

This report is intended for use by a supervisor to review the agents' ACD interaction activity on a detailed level. Each day and queue are summarized with the total agent activity. The load ratio information will only show on the summary lines, since these calculations do not apply to the individual interaction types.

Flexible Fields

This report also has two Flexible Fields, which are the last two columns of the report.

By default, IC displays **Local Disconnect** in the first flexible field, but you can easily change this flexible field in Interaction Administrator, to show the other values:

- Local Disconnect = 1 (default)
- Flowed Out = 2
- Entered = 3
- Transferred = 4

- Ring Time = 5
- Custom value 1 = 6
- Custom value 2 = 7
- Internal to Internal = 8
- Internal to Internal ACD = 9
- Supervisor Requests = 10

The second flexible field shows **Load Ratio** by default. You may change this default to show these other values:

- % Service Level 1 = 1
- % Service Level 2 = 2
- % Service Level 3 = 3
- % Service Level 4 = 4
- % Service Level 5 = 5
- % Service Level 6 = 6
- Load Ratio = 7 (default)
- Load - Hold Ratio = 8

Parameters

You specify a range of agents, dates, times, site IDs, and shifts to report on. IC sorts this report by agent, date, queue, and then by interaction type in ascending order.

Report Element

Report Field or Value

Field or Value Description

{none}	cName	The agent identifier of the agents.
Date	DIntervalStart	The date or time as specified in the range selection. This could be an interval, hour, day, week, day of week, month or year.
{none}	CReportGroup	The name of the queues for the selected agents. All Queues in the summary information and is represented in the database by an asterisks.
(none)	InteractionType	The type of ACD interaction. Possible values are calls, chats and emails.
Int	NAnsweredACD	The number of ACD Interactions that were answered.
Avg. Talk	tTalkACD/nAnsweredACD	The average amount of time spent on the incoming ACD interactions.
Total Talk	tTalkACD	The amount of time spent on the incoming ACD interactions. Note tTalkACD is the time an interaction is active with an agent, including any Hold time with the agent during the interaction.
Avg ACW	TACW/nAnsweredACD	The average amount of time spent on after call work.
Total ACW	TACW	The amount of time spent on after call work.
Avg Speed Ans	TAnsweredACD/nAnsweredACD	The average amount of time the interactions spent alerting before they were answered by the agent.
Disconnect	NLocalDisconnectACD	Default Flexible Field - The

		number of ACD interactions that were disconnected locally.
Ring Total	TAlertedACD	Flexible Field - The amount of <i>time</i> the interactions spent alerting the agent.
Flow Out	NFlowOutACD	Flexible Field - The number of items in the queue that were removed before connecting to an agent.
Entered	NEnteredACD	Flexible Field - The number of interactions that entered the queue.
Transfer	NTransferredACD	Flexible Field - The number of interactions that were transferred while in this queue.
% Srv Level 1	$\frac{(n\text{AnsweredACDSvcLv1} / n\text{AnsweredACD}) * 100}{}$ <p>Levels 1 through 6: The total number of ACD interactions that were answered within the selected service level divided by the total number of ACD interactions that were answered for the specified range. This number is multiplied by 100 to get the percentage.</p>	Flexible Field – The percentage of interactions that were answered within the first service level. You setup the service level interval in Interaction Administrator. Please keep in mind you setup these service levels for queue expectations, not agents, although IC applies the same service level settings to agents. For example, if IC sends the caller to voice mail or transfers the caller to another available age, there may be no information above % service level 3.
% Srv Level 2	$\frac{(n\text{AnsweredACDSvcLv2} / n\text{AnsweredACD}) * 100}{}$	Flexible Field - The percentage of interactions that were answered within the second service level. The default second service level is 20 seconds.
% Srv Level 3	$\frac{(n\text{AnsweredACDSvcLv3} / n\text{AnsweredACD}) * 100}{}$	Flexible Field - The percentage of interactions that were answered within the third service level.
% Srv Level 4	$\frac{(n\text{AnsweredACDSvcLv4} / n\text{AnsweredACD}) * 100}{}$	Flexible Field - The percentage of interactions that were answered within the fourth service level.
% Srv Level 5	$\frac{(n\text{AnsweredACDSvcLv5} / n\text{AnsweredACD}) * 100}{}$	Flexible Field - The percentage of interactions that were answered within the

	100	fifth service level.
% Srv Level 6	$(n\text{AnsweredACDSvcLvl6} / n\text{AnsweredACD}) * 100$	Flexible Field - The percentage of interactions that were answered within the sixth service level.
Load Ratio	$t\text{TalkACD} / t\text{AgentOnACDCall}$	Default Flexible Field - The ratio of total ACD talk time to the amount of time actually worked during the selected interval. This ratio is most meaningful when agents are allowed to take multiple interactions at the same time.
Load – Hold	$(t\text{TalkACD} - t\text{HoldACD}) / (t\text{AgentOnACDCall} + t\text{AgentInACW})$	Flexible Field - The ratio of total ACD talk time minus the time the interactions were on hold to the amount of time actually worked during the selected interval. This ratio is most meaningful when agents are allowed to take multiple interactions at the same time.

Record selection criteria for this report includes:

= "" )
)
)

```

Formulas:

All times are expressed as hh:mm:ss. This formula is used throughout the report to convert seconds to hh:mm:ss. This formula is external to the report file.

Ints = The sum of ACD interactions answered.

Avg Talk = The total agent incoming ACD talk time divided by the number of ACD interactions answered.

Avg Speed Ans = The total amount of time the interactions were alerting the agents divided by the total number of ACD interactions answered.

Avg ACW = The total amount of time the agents spent on after call work divided by the total number of ACD interactions answered.

Srv Levels 1 – 6 = The total number of ACD interactions that were answered within the selected service level divided by the total number of ACD interactions that were answered. This number is then multiplied by 100 to give the percentage.

Load Ratio = The total amount of time an agent spent on ACD related interactions divided by the amount of time the agent was on an ACD interaction. In a multiple interaction environment, an agent's total talk time can exceed the time of the interval. This ratio is the amount of total talk time during an interval divided by the actual amount of time in the interval the agent spent on ACD related activities.

Note: If you use multiple interaction handling, you can be on more than one ACD action at a time. The result can be a load ratio greater than 100%.

Load – Hold = The total amount of time an agent spent on ACD related interactions minus the amount of the ACD interactions that were on hold divided by the amount of time the agent was on an ACD interaction plus the amount of time the agent was in an ACW state. In a multiple interaction

environment, an agent's total talk time can exceed the time of the interval. This ratio is the amount of total talk time during an interval divided by the actual amount of time in the interval the agent spent on ACD related activities.

Disconnect = The sum of the ACD interactions that were disconnected locally.

Flow Out = The sum of the ACD interactions that were removed from the queue that were never answered by an agent.

Entered = The sum of the interactions that entered the ACD queue.

Transfer = The sum of the interactions that were transferred while in this queue.

Agent Performance Detail for Queue by Interval Report

The Agent Performance Detail for Queue by Interval report displays a detail of agent information by interval for a specified date/time/interval range for selected agents. You can select the agents individually or by a workgroup. This report shows the summary for each agent by queue, by day, and by interval. It shows the number of ACD interactions, after call work, and time available for ACD interactions.

This report is intended for use by a supervisor to review the agents' ACD interaction activity on a detailed level.

Flexible Fields

This report also has two Flexible Fields, which are the last two columns of the report.

By default, IC displays **Local Disconnect** in the first flexible field, but you can easily change this flexible field in Interaction Administrator, to show the other values:

- Local Disconnect = 1 (default)
- Flowed Out = 2
- Entered = 3
- Transferred = 4
- Ring Time = 5
- Custom value 1 = 6
- Custom value 2 = 7
- Internal to Internal = 8
- Internal to Internal ACD = 9
- Supervisor Requests = 10

The second flexible field shows **Load Ratio** by default. You may change this default to show these other values:

- % Service Level 1 = 1
- % Service Level 2 = 2

- % Service Level 3 = 3
- % Service Level 4 = 4
- % Service Level 5 = 5
- % Service Level 6 = 6
- Load Ratio = 7
- Load - Hold Ratio = 8

Parameters

You specify a range of agents, dates, times, site IDs, and shifts to report on. IC sorts this report by agent, date, queue, and then by interaction type in ascending order.

The screenshot shows a 'Sample Report' from Genesys. The report title is 'Sample Report' and it includes the Genesys logo. Below the title, there is a table with the following columns: Queue, Shift, Agent, Utilization, Wait Time, % of Total Missed, and % of Total Missed. The table contains several rows of data, including a summary row for 'Queue' and 'Shift' and individual rows for 'Agent'.

Report Element

Report Field or Value

Field or Value Description

{none}

cName

The agent identifier of the agents.

Date

DIntervalStart

The date or time as specified in the range selection. This could be an interval, hour, day, week, day of week, month or year.

{none}

CRReportGroup

The name of the queues for the selected agents. All Queues in the summary information and is represented in the database by an asterisks.

(none)	InteractionType	The type of ACD interaction. Possible values are calls, chats and emails. This information
Int	NAnsweredACD	The number of ACD Interactions that were answered.
Avg. Talk	tTalkACD/nAnsweredACD	The average amount of time spent on the incoming ACD interactions.
Total Talk	tTalkACD	The amount of time spent on the incoming ACD interactions. Note tTalkACD is the time an interaction is active with an agent, including any Hold time with the agent during the interaction.
Avg ACW	TACW/nAnsweredACD	The average amount of time spent on after call work.
Total ACW	TACW	The amount of time spent on after call work.
Avg Speed Ans	TAnsweredACD/nAnsweredACD	The average amount of time the interactions spent alerting before they were answered by the agent.
Disconnect	NLocalDisconnectACD	Default Flexible Field - The number of ACD interactions that were disconnected locally.
Ring Total	TAlertedACD	Flexible Field - The amount of time the interactions spent alerting the agent.
Flow Out	NFlowOutACD	Flexible Field - The number of items in the queue that were removed before connecting to an agent.

Entered	NEnteredACD	Flexible Field - The number of interactions that entered the queue.
Transfer	NTransferredACD	Flexible Field - The number of interactions that were transferred while in this queue.
% Srv Level 1	$\left(\frac{n\text{AnsweredACDSvcLv1}}{n\text{AnsweredACD}} \right) * 100$ <p>Levels 1 through 6: The total number of ACD interactions that were answered within the selected service level divided by the total number of ACD interactions that were answered for the specified range. This number is multiplied by 100 to get the percentage.</p>	Flexible Field – The percentage of interactions that were answered within the first service level. You setup the service level interval in Interaction Administrator. Please keep in mind you setup these service levels for queue expectations, not agents, although IC applies the same service level settings to agents. For example, if IC sends the caller to voice mail or transfers the caller to another available age, there may be no information above % service level 3.
% Srv Level 2	$\left(\frac{n\text{AnsweredACDSvcLv2}}{n\text{AnsweredACD}} \right) * 100$	Flexible Field - The percentage of interactions that were answered within the second service level. The default second service level is 20 seconds.
% Srv Level 3	$\left(\frac{n\text{AnsweredACDSvcLv3}}{n\text{AnsweredACD}} \right) * 100$	Flexible Field - The percentage of interactions that were answered within the third service level.
% Srv Level 4	$\left(\frac{n\text{AnsweredACDSvcLv4}}{n\text{AnsweredACD}} \right) * 100$	Flexible Field - The percentage of interactions that were answered within the fourth service level.
% Srv Level 5	$\left(\frac{n\text{AnsweredACDSvcLv5}}{n\text{AnsweredACD}} \right) * 100$	Flexible Field - The percentage of interactions that were answered within the fifth service level.
% Srv Level 6	$\left(\frac{n\text{AnsweredACDSvcLv6}}{n\text{AnsweredACD}} \right) * 100$	Flexible Field - The percentage of interactions that were answered within the sixth service level.
Load Ratio	tTalkACD/ tAgentOnACDCall	Default Flexible Field - The ratio of total ACD talk time to the amount of time actually worked during the selected interval. This ratio is most meaningful when agents are allowed to take multiple interactions at the same time.

Load – Hold	$(tTalkACD - tHoldACD) / (tAgentOnACDCall + tAgentInACW)$	Flexible Field - The ratio of total ACD talk time minus the time the interactions were on hold to the amount of time actually worked during the selected interval. This ratio is most meaningful when agents are allowed to take multiple interactions at the same time.
Available	TAgentAvailable	The total amount of time the agent was in an ACD available state.
In Ints	$(nExternToInternCalls - nExternToInternAcdCalls) + (nInternToInternCalls) - nInternToInternAcdCalls)$	The number of incoming non-ACD interactions.
Avg In Talk	$((tExternToInternCalls - tExternToInternAcdCalls) + (tInternToInternCalls) - tInternToInternAcdCalls) / \text{Incoming Interactions}$	The average amount of time spent on incoming non-ACD interactions.
Total Time In	$(tExternToInternCalls - tExternToInternAcdCalls) + (tInternToInternCalls) - tInternToInternAcdCalls)$	The total amount of time spent on incoming non-ACD interactions
Out Ints	$NInternToExternCalls - nInternToExternAcdCalls$	The number of outgoing non-ACD interactions.
Avg Out Talk	$(tInternToExternCalls - tInternToExternAcdCalls) / \text{Outgoing Interactions}$	The average amount of time spent on outgoing non-ACD interactions.
Total Time Out	$tInternToExternCalls - tInternToExternAcdCalls$	The total amount of time spent on outgoing non-ACD interactions.

Formulas:

All times are expressed as hh:mm:ss. This formula is used throughout the report to convert seconds to hh:mm:ss. This formula is external to the report file.

Ints = The sum of ACD interactions answered.

Avg Talk = The total agent incoming ACD talk time divided by the number of ACD interactions answered.

Avg Speed Ans = The total amount of time the interactions were alerting the agents divided by the total number of ACD interactions answered.

Avg ACW = The total amount of time the agents spent on after call work divided by the total number of ACD interactions answered.

Srv Levels 1 – 6 = The total number of ACD interactions that were answered within the selected service level divided by the total number of ACD interactions that were answered. This number is then multiplied by 100 to give the percentage.

Load Ratio = The total amount of time an agent spent on ACD related interactions divided by the amount of time the agent was on an ACD interaction. In a multiple interaction environment, an agent's total talk time can exceed the time of the interval. This ratio is the amount of total talk time during an interval divided by the actual amount of time in the interval the agent spent on ACD related activities.

Note: If you use multiple interaction handling, you can be on more than one ACD action at a time. The result can be a load ratio greater than 100%.

Load – Hold = The total amount of time an agent spent on ACD related interactions minus the amount of the ACD interactions that were on hold divided by the amount of time the agent was on an ACD interaction plus the amount of time the agent was in an ACW state. In a multiple interaction environment, an agent's total talk time can exceed the time of the interval. This ratio is the amount of total talk time during an interval divided by the actual amount of time in the interval the agent spent on ACD related activities.

Disconnect = The sum of the ACD interactions that were disconnected locally.

Flow Out = The sum of the ACD interactions that were removed from the queue that were never answered by an agent.

Entered = The sum of the interactions that entered the ACD queue.

Transfer = The sum of the interactions that were transferred while in this queue.

In Ints = The sum of all incoming interactions minus the incoming ACD interactions.

Avg In Talk = The total amount of time spent on incoming interactions minus the total amount of time spent on incoming ACD interactions all divided by incoming interactions.

Total Time In = The total amount of time spent on incoming interactions minus the total amount of time spent on incoming ACD interactions.

Out Ints = The sum of all outgoing interactions minus the outgoing ACD interactions.

Avg Out Talk = The total amount of time spent on outgoing interactions minus the total amount of time spent on outgoing ACD interactions all divided by Outgoing Interactions.

Total Time Out = The total amount of time spent on outgoing interactions minus the total amount of time spent on outgoing ACD interactions.

Agent Performance Summary for Queue Report

This report is for supervisors who want to analyze agents and their interaction activity at a summary level. You can select agents individually or by queue. It shows a summary of activity for each agent, without regards to queue. Specifically, it shows the number of ACD interactions, after call work, time available for ACD interactions, and non-ACD activity. IC sorts this report by agent, then by date.

Note

IC no longer queries information based on workgroup membership for this report. IC now only queries agents that are associated with the active distribution queue.

This report also has Flexible Fields. By default, IC displays Disconnect in the first flexible field, but you can easily change this flexible field in Interaction Administrator, to show the other values:

- Local Disconnect = 1
- Flowed Out = 2
- Grabbed = 3 (Note, this field is still available on this report, but IC does not currently use it.)
- Entered = 4
- Transferred = 5
- Ring Time = 6

The second flexible field shows Service Level 1 by default. You may change this default to show these other values:

- % Service Level 1 = 1
- % Service Level 2 = 2
- % Service Level 3 = 3
- % Service Level 4 = 4
- % Service Level 5 = 5
- % Service Level 6 = 6
- Load Ratio = 7
- Load - Hold Ratio = 8

Parameters

You specify a range of agents, dates, times, site IDs, queues and shifts to report on.

QUEUE_PERIOD_AGENT_PERF_SUMMARY_NAME

Sample report

Click on the image below to view a sample of this report.

The screenshot shows a 'Sample Report' from GENESYS. The table has columns for Agent, Date Range, and various performance metrics. The data rows show performance for different agents and date ranges, with values for metrics like 'nAnsweredACD' and 'tTalkACD'.

Report Element	Report Field or Value	Field or Value Description
{none}	cName	The name of an agent in the specified range.
Date	dIntervalStart	The date or time in the specified range. This could be an interval, hour, day, week, day of week, month or year.
{none}	cReportGroup	The name of the queue for the selected agent. All queues in the summary information is represented in the database by an asterisk.
Int	nAnsweredACD	The number of ACD interactions that were answered.
Avg. Talk	tTalkACD / nAnsweredACD	The average amount of time spent on the incoming ACD interactions. The total agent incoming ACD interaction time divided by the number of ACD interactions answered for the specified range.
Total Talk	tTalkACD	The amount of time spent on the incoming ACD interactions. The agent incoming ACD interactions time. Note tTalkACD is the time an interaction is active with an agent, including any Hold time with the agent during the interaction.
Avg ACW	tACW / nAnsweredACD	The average amount of time the agent spent on After Call Work. The total amount of time the agents spent of after call work divided by the total

		number of ACD calls answered for the specified range.
Total ACW	tACW	The amount of time the agent spent on After Call Work. The total amount of time the agents spent of after call work.
Avg Speed Ans	$t_{\text{AnsweredACD}} / n_{\text{AnsweredACD}}$	The average amount of time an interaction spent alerting before the agent answered it. The total amount of time the interactions were alerting the agents divided by the total number of ACD interactions answered for the specified range.
Disconnect	nLocalDisconnectACD	Default Flexible Field – The default for this flexible field is Disconnect. The number of ACD interactions that were disconnected locally (i.e., by an IC user, not the external party)
Flow Out	nFlowOutACD	Flexible Field - The number of items that were removed from this queue without having been in a Client_Connected or Inactive state (e.g., Alerting call went to Voice Mail, an agent didn't answer a call which went to the next available agent, etc.)
Entered	nEnteredACD	Flexible Field - The number of interactions that entered the queue.
Transfer	nTransferredACD	Flexible Field - The number of interactions that were transferred while in this queue. Transfers from statistics group to statistics group will not show up on this count, and will only show as an nFlowOutACD.
Ring Total	tAlertedACD	Flexible Field - The amount of time ACD interactions spent in alerting the agent.
% Srv Level 1	$(n_{\text{AnsweredACDSvcLvl1}} / n_{\text{AnsweredACD}}) * 100$	Default Flexible Field – The default for this flexible field is Service Level 1. The percentage of interactions that were answered within the first service level. You setup the service level interval in Interaction Administrator. Please keep in mind you setup these service levels for queue expectations, not agents, although IC applies the same service level settings to agents. For example, if IC
	Levels 1 through 6: The total number of ACD interactions that were answered within the selected service level divided by	

	<p>the total number of ACD interactions that were answered for the specified range. This number is multiplied by 100 to get the percentage.</p>	<p>sends the caller to voice mail or transfers the caller to another available age, there may be no information above % service level 3.</p>
% Srv Level 2	$\left(\frac{n\text{AnsweredACDSvcLvl2}}{n\text{AnsweredACD}} \right) * 100$	<p>Flexible Field - The percentage of interactions that were answered within the second service level. The default second service level is 20 seconds.</p>
% Srv Level 3	$\left(\frac{n\text{AnsweredACDSvcLvl3}}{n\text{AnsweredACD}} \right) * 100$	<p>Flexible Field - The percentage of interactions that were answered within the third service level.</p>
% Srv Level 4	$\left(\frac{n\text{AnsweredACDSvcLvl4}}{n\text{AnsweredACD}} \right) * 100$	<p>Flexible Field - The percentage of interactions that were answered within the fourth service level.</p>
% Srv Level 5	$\left(\frac{n\text{AnsweredACDSvcLvl5}}{n\text{AnsweredACD}} \right) * 100$	<p>Flexible Field - The percentage of interactions that were answered within the fifth service level.</p>
% Srv Level 6	$\left(\frac{n\text{AnsweredACDSvcLvl6}}{n\text{AnsweredACD}} \right) * 100$	<p>Flexible Field - The percentage of interactions that were answered within the sixth service level.</p>
Load Ratio	$t\text{TalkACD} / t\text{AgentOnACDCall}$	<p>Flexible Field - The ratio of total ACD talk time to the amount of time actually worked during the selected interval. This ratio is most meaningful when agents are allowed to handle multiple interactions at the same time.</p>
Load Hold Ratio	$t\text{TalkACD} / (t\text{AgentOnACDCall} + t\text{AgentInACW}) - \text{hold time}$	<p>Flexible Field - The ratio of total ACD talk time to the amount of time actually worked – hold time during the selected interval. This ratio is most meaningful when agents are allowed to handle multiple interactions at the same time.</p>
In Ints	$(n\text{ExternToInternCalls} - n\text{ExternToInternACDCalls})$	<p>The number of incoming non-ACD interactions.</p>
Avg In Talk	$\left(\frac{(t\text{ExternToInternCalls} - t\text{ExternToInternACDCalls}) + t\text{InternToInternCalls}}{(n\text{InternToInternACDCalls})} \right) / \text{Incoming Interactions}$	<p>The average amount of time spent on incoming non-ACD interactions. This only includes incoming calls external to the system.</p>

Total Time In	$(t\text{ExternToInternCalls} - t\text{ExternToInternACDCalls}) + (t\text{InternToInternCalls} - t\text{InternToInternACDCalls})$	The total amount of time spent on incoming non-ACD interactions. This only includes incoming calls external to the system.
Out Ints	$n\text{InternToExternCalls} - n\text{InternToExternACDCalls}$	The number of outgoing non-ACD interactions. This only includes outgoing calls external to the system.
Avg Out Talk	$(t\text{InternToExternCalls} - t\text{InternToExternACDCalls}) / \text{Outgoing Interactions}$	The average amount of time spent on outgoing non-ACD interactions. This only includes outgoing calls external to the system.
Total Time Out	$t\text{InternToExternCalls} - t\text{InternToExternACDCalls}$	The total amount of time spent on outgoing non-ACD interactions. This only includes outgoing calls external to the system.

Record selection criteria for this report includes:

{|AgentQueueStats.dIntervalStart} in {?StartDateTime} to {?EndDateTime})and
{|AgentQueueStats.cType}="A" and
{|AgentQueueStats.cName} in {?StartStatGroup} to {?EndStatGroup} and
{|AgentQueueStats.cReportGroup} in {?StartReportGroup} to {?EndReportGroup} and
{|AgentQueueStats.SiteId} in {?StartSiteId} to {?EndSiteID}

Caller ID Summary by Date Report

This report shows a summary of inbound calls and chats each IC user received from each identified external telephone number or IP address. IC displays chats under the IP address from where the chat originated. The chat header name displayed is the name of the first chat found in the query of the data. This name does not represent the person that made all the chats. This report is helpful for viewing date activity for a specific caller ID.

Parameters

You specify a range of dates, caller ID numbers, and site IDs to include in the report. IC sorts this report by date, so you will see different caller IDs under the same date. For best results, you should run this report for one caller ID at a time.

Note
If you enter a range for one of these specific parameters (caller IDs, dialed numbers, DNIS, and user IDs), and a record included in this range has a null value for any one of these parameters, then this record will be excluded on the report. It is not possible to include these records at this time.

Report Element

Report Field or Value

Field or Value Description

Date

ConnectedDate

The date for each call from this Caller ID number.

User

LocalUserId

The name of the IC party this call connected to.

Remote Number

RemoteNumber or RemoteNumberFmt

The external phone number or extension of the calling party. The call contains the number of a calling party if caller ID is available. **Out of Area**, or **External Call** appears if caller ID is not available. An empty value is possible if the call was an **Intercom** call that was terminated before the Remote party was specified.

Total Calls

Count of ConnectedDate entries

The number of inbound call detail entries for a Caller ID number.

Total Duration

Sum(CallDurationSeconds)

Displays the total number of seconds for all calls associated with a Caller ID number, on the given date(s).

Avg. Duration

Avg(CallDurationSeconds)

Displays the average number of seconds for all calls from this Caller ID number,

on the given date(s).

Hold Duration	HoldDurationSeconds	The number of seconds that a call from a Caller ID was on hold.
Avg Hold Duration	Sum(HoldDurationSeconds / Count(ConnectedDate)	The average time that all calls from a Caller ID were on hold, on the given date(s).
Caller ID Number of Calls (Summary)	Count of ConnectedDate	Counts the number of call detail entries for this Caller ID number.
Total Caller ID Duration (Summary)	Sum(CallDurationSeconds)	Displays the total number of seconds for all calls associated with this Caller ID number.
Avg. Duration (Summary)	Sum(CallDurationSeconds) / Count(ConnectedDate)	Displays the average time for all Caller ID calls, on the given date(s).
Date	ConnectedDate	The date for each call from this Caller ID number.
User	LocalUserId	The name of the IC party this call connected to.

Record Selection Criteria:

{CallDetail.ConnectedDate} in {?StartDateTime} to {?EndDateTime} and

{CallDetail.Direction = 'Inbound' and

{CallDetail.SiteID} in {?StartSiteID} to {?EndSiteID} and

{CallDetail.RemoteNumber} in {?StartCallerID} to {?EndCallerID}

Caller ID Summary by User Report

This report shows a summary of caller IDs of calls and chats each IC user received from each identified external telephone number or IP address. IC displays chats under the IP address from where the chat originated. The chat header name displayed is the name of the first chat found in the query of the data. This name does not represent the person that made all the chats. This report is helpful for viewing caller ID activity for a specific user.

Parameters

You specify a range of dates, caller ID numbers, IC users, and site IDs to include in the report. IC sorts this data by IC user, date, then by remote number. Use these parameters to restrict the report to a specific list of caller ID and users.

report.

Date	ConnectedDate	The date for each call from this Caller ID number.
Total Calls	Count of ConnectedDate entries	The number of inbound call detail entries for a Caller ID number.
Total Duration	Sum(CallDurationSeconds)	Displays the total number of seconds for all calls received from a Caller ID number, on the given date(s).
Avg. Duration	Sum(CallDurationSeconds) / Count(ConnectedDate)	Displays the average number of seconds for all calls from this Caller ID number, on the given date(s).
Hold Duration	HoldDurationSeconds	The number of seconds that a call from a Caller ID was on hold.
Avg Hold Duration	Sum(HoldDurationSeconds) / Count(ConnectedDate)	The average time that all calls from a Caller ID were on hold, on the given date(s).
Caller ID Number of Calls (Summary)	Count of ConnectedDate	Counts the number of call detail entries for this Caller ID number.
Avg. Duration (Summary)	Sum(CallDurationSeconds) / Count(ConnectedDate)	Displays the average time for all Caller ID calls, on the given date(s).
Total Caller ID Duration (Summary)	Sum(CallDurationSeconds)	Displays the total number of seconds for all calls associated with this Caller ID number.

Record Selection Criteria:

{CallDetail.ConnectedDate} in {?StartDateTime} to {?EndDateTime} and

{CallDetail.CallDirection} = "Inbound" and

{CallDetail.RemoteNumber} in {?StartCallerID} to {?EndCallerID} and

{CallDetail.LocalUserId} in {?StartUser} to {?EndUser} and

{CallDetail.SiteId} in {?StartSiteId} to {?EndSiteId}

Distribution Queue Performance (Date by Queue by Interaction Type) Report

This report allows you to see a detailed view of queue activity grouped by date. It includes such information as interactions answered, total talk time, average talk times, and average speed of answer. It also shows information on ACW time and Abandons.

The report has Flexible Fields that are configurable in Interaction Administrator. By default, IC displays Average Wait to Answer, Percentage of Calls Answered in First Service Level and the Load Ratio in these flexible fields, but you can easily change these fields in Interaction Administrator, to show other values.

Parameters

You specify the range of queues, dates and time, shift times, and site IDs as parameters. You can specify all or part of a day in the time range. The report is based on a logging subsystem that is updated every 10 seconds plus time dependent on implementation architecture or topology.

This report sorts the information by date/time, queue, and then by media type, in ascending order.

Report Element

Report Field or Value

Field or Value Description

Site ID

SiteID

The name of the Site ID as specified in the range.

Queue

cName

The queue name as specified in the queue range.

Media Type

cHKey3

The name of the various media types, Call, Chat, Email Object, Generic Object.

Date/Time

dIntervalStart

The date and time for each date included in the date range selected for this report. The date can be displayed as interval, hour, day, week or month.

Ints Ans

NAnsweredACD

The number of ACD interactions that

		were answered.
Avg Talk	$t\text{TalkACD} / n\text{AnsweredACD}$	The average amount of time spent on the incoming ACD interactions.
Total Talk	$t\text{TalkACD}$	The total amount of time spent on incoming ACD interactions. Note $t\text{TalkACD}$ is the time an interaction is active with an agent, including any Hold time with the agent during the interaction.
Avg ACW	$T\text{ACW} / n\text{AnsweredACD}$	The average amount of time the agents in the queue spent on After Call Work.
Total ACW	$T\text{ACW}$	The total amount of time the agents in the queue spent on After Call Work
Ints Aban	$N\text{AbandonedACD}$	The number of interactions abandoned while waiting for an agent.
Avg Aband Time	$T\text{AbandonedACD} / n\text{AbandonedACD}$	The average amount of time the interaction spent in the queue before it was abandoned.
Perc Aband	$(N\text{AbandonedACD} / n\text{EnteredACD}) * 100$	The percentage of interactions that were abandoned in the queue.
Max Wait Ans	$M\text{tAnswered}$	The maximum number of seconds a interaction was in the queue before it was answered.
Flexible Field 1: Avg Wait Ans	$T\text{AnsweredACD} / n\text{AnsweredACD}$	Default Flexible Field: The average amount of time all interactions spent in the workgroup queue before being answered by an agent.
Flexible Field 1: Svc Lvl 1 %	$(N\text{AnsweredACDSvcLvl1} / n\text{AnsweredACD}) * 100$	Flexible Field: The percentage of calls that were answered within the first service level. The first service level interval is determined in Interactive Administrator and the default first service level is 10 seconds.
Flexible Field 1: Load Ratio	$t\text{TalkACD} / t\text{AgentOnACDCall}$	Flexible Field: The ratio of total ACD talk time to the amount of time actually worked during the selected interval. This ratio is most meaningful when agents are allowed to take multiple interactions at the same time.

Flexible Field 1: Load – Hold	$\frac{(tTalkACD - tHoldACD)}{(tAgentOnACDCall + tAgentInACW)}$	Flexible Field: The ratio of total ACD talk time minus the time the interactions were on hold to the amount of time actually worked during the selected interval. This ratio is most meaningful when agents are allowed to take multiple interactions at the same time.
Flexible Field 1: Disconnect	NLocalDisconnectACD	Flexible Field: The number of ACD calls that were disconnected locally.
Flexible Field 2: Avg Wait Ans	TAnsweredACD / nAnsweredACD	Flexible Field: The average amount of time all interactions spent in the workgroup queue before being answered by an agent.
Flexible Field 2: Svc Lvl 1 %	$\left(\frac{NAnsweredACDSvcLvl1}{nAnsweredACD}\right) * 100$	Default Flexible Field: The percentage of calls that were answered within the first service level. The first service level interval is determined in Interactive Administrator and the default first service level is 10 seconds.
Flexible Field 2: Load Ratio	$\frac{tTalkACD}{(tAgentOnACDCall + tAgentInACW)}$	Flexible Field: The ratio of total ACD talk time to the amount of time actually worked during the selected interval. This ratio is most meaningful when agents are allowed to take multiple interactions at the same time.
Flexible Field 2: Load – Hold	$\frac{(tTalkACD - tHoldACD)}{(tAgentOnACDCall + tAgentInACW)}$	Flexible Field: The ratio of total ACD talk time minus the time the interactions were on hold to the amount of time actually worked during the selected interval. This ratio is most meaningful when agents are allowed to take multiple interactions at the same time.
Flexible Field 2: Disconnect	NLocalDisconnectACD	Flexible Field: The number of ACD calls that were disconnected locally.
Flexible Field 3: Avg Wait Ans	TAnsweredACD / nAnsweredACD	Flexible Field: The average amount of time all interactions spent in the workgroup queue before being answered by an agent.

Flexible Field 3: Svc Lvl 1 %	$(N_{\text{AnsweredACDSvcLvl1}} / n_{\text{AnsweredACD}}) * 100$	Flexible Field: The percentage of calls that were answered within the first service level. The first service level interval is determined in Interactive Administrator and the default first service level is 10 seconds.
Flexible Field 3: Load Ratio	$t_{\text{TalkACD}} / (t_{\text{AgentOnACDCall}} + t_{\text{AgentInACW}})$	Default Flexible Field: The ratio of total ACD talk time to the amount of time actually worked during the selected interval. This ratio is most meaningful when agents are allowed to take multiple interactions at the same time.
Flexible Field 3: Load – Hold	$(t_{\text{TalkACD}} - t_{\text{HoldACD}}) / (t_{\text{AgentOnACDCall}} + t_{\text{AgentInACW}})$	Flexible Field: The ratio of total ACD talk time minus the time the interactions were on hold to the amount of time actually worked during the selected interval. This ratio is most meaningful when agents are allowed to take multiple interactions at the same time.
Flexible Field 3: Disconnect	$N_{\text{LocalDisconnectACD}}$	Flexible Field: The number of ACD calls that were disconnected locally.

Record Selection Criteria:

$\{\{QueueStats.dIntervalStart\} \text{ in } \{?DateTime\} \text{ and}$
 $\{QueueStats.cType\} = \{QueueStats.cType\} \text{ and}$
 $\{QueueStats.cReportgroup\} \text{ in } \{?ReportGroup\} \text{ and}$
 $\{QueueStats.SiteId\} \text{ in } \{?SiteId\} \text{ and}$
 $\{@StatusTime\} \text{ IN } \{?ShiftTime\} \text{ and}$
 $\{QueueStats.cReportGroup\} \lt;> "-" \text{ and}$
 $(IsNull(\{QueueStats.cHKey3\}) \text{ or } \{QueueStats.cHKey3\} = "*" \text{ or } \{QueueStats.cHKey3\} = "") \text{ and}$
 $(IsNull(\{QueueStats.cHKey4\}) \text{ or } \{QueueStats.cHKey4\} = "*" \text{ or } \{QueueStats.cHKey4\} = "") \text{ and}$
 $\{QueueStats.cName\} = \{?Workgroup\}$

Formulas:

Ints Ans = The sum of ACD interactions answered for the queue and date range.

Avg Talk = The total incoming ACD talk time divided by the number of ACD interactions answered for the specified queue and date range.

Total Talk = The sum of talk time for interactions answered for the queue and date range.

Avg ACW = The total amount of time the agents in the queue spent on after call work divided by the total number of ACD interactions answered for the specified statistics group and date range.

Total ACW = The total amount of time the agents in the queue spent on after call work.

IntsAban = The sum of ACD interactions abandoned in the queue before connecting to an agent for the specified queue and date range.

Avg Aban = The total amount of time the abandoned interactions spent in an alerting status divided by the total number of ACD interactions that were abandoned for the specified statistics group and date range.

% Aband = The total number of ACD interactions that were abandoned divided by the total number of interactions that entered the ACD queue for the specified queue and date range. This number is multiplied by 100 to give the percentage.

Max Wait Ans = The maximum amount of time a interaction waited in the queue before being answered.

Avg Wait Ans = The total amount of time the interactions were in queue before reaching a client connected state divided by the total number of ACD interactions answered for the specified queue and date range.

% Srv Level = The total number of ACD interactions that were answered within the first service level divided by the total number of ACD interactions that were answered. This number is then multiplied by 100 to give the percentage.

Load Ratio = The total amount of time an agent is in the queue spent on ACD related interactions divided by the amount of time the agent was on an ACD interaction. In a multiple interaction environment, an agent's total talk time can exceed the time of the interval. This ratio is the amount of total talk time during an interval divided by the actual amount of time in the interval the agent spent on ACD related activities.

Load – Hold = The total amount of time an agent spent on ACD related interactions minus the amount of the ACD interactions were on hold divided by the amount of time the agent was in the an agent on an ACD interaction plus the amount of time the agent was in an ACW state. In a multiple interaction environment, an agent's total talk time can exceed the time of the interval. This ratio is the amount of total talk time during an interval divided by the actual amount of time in the interval the agent spent on ACD related activities.

Disconnect = The sum of the ACD interactions that were disconnected locally.

All times are expressed as hh:mm:ss. This formula is used throughout the report to convert seconds to hh:mm:ss. This formula is external to the report file.

Distribution Queue Performance (Date by Queue) Report

This report allows you to see a detailed view of queue activity with a breakdown by date. It includes such information as interactions answered, total talk time, average talk times, and average speed of answer. It also shows information on ACW time and Abandons.

The report has Flexible Fields that are configurable in Interaction Administrator. By default, IC displays Average Wait to Answer, Percentage of Calls Answered in First Service Level and the Load Ratio in these flexible fields, but you can easily change these fields in Interaction Administrator, to show other values.

Parameters

You specify the range of queues, dates and time, shift times, and site IDs as parameters. You can specify all or part of a day in the time range. The report is based on a logging subsystem that is updated every 10 seconds plus time dependent on implementation architecture or topology.

This report sorts the information by date/time and then by queue, in ascending order.

All times are expressed as hh:mm:ss. This formula is used throughout the report to convert seconds to hh:mm:ss. This formula is external to the report file.

Distribution Queue Performance (Queue by Date Grouping) Report

This report allows you to see a summary view of queue activity grouped by date. It includes such information as interactions answered, total talk time, average talk times, and average speed of answer. It also shows information on ACW time and Abandons.

The report has Flexible Fields that are configurable in Interaction Administrator. By default, IC displays Average Wait to Answer, Percentage of Calls Answered in First Service Level and the Load Ratio in these flexible fields, but you can easily change these fields in Interaction Administrator, to show other values.

The report can be sorted by queue and date by year, or month, or week, or day of week, based on a configurable parameter Group3.

Parameters

You specify the range of queues, dates and time, shift times, site IDs, and a report sort/group to define the type of interval: year, month , day of the week, or week number.

The screenshot shows a 'Sample Report' header with the GENESYS logo. Below the header is a table with the following columns: Group, SiteID, Queue, Media Type, Date/Time, Ints Ans, Avg Talk, Total Talk, and Avg ACW. The table contains several rows of data, including a 'Group' row and multiple rows for 'Media Type' and 'Queue'.

Report Element

Report Field or Value

Field or Value Description

Site ID

SiteID

The name of the Site ID as specified in the range.

Queue

cName

The queue name as specified in the queue range.

Media Type

chKey3

The name of the various media types, Call, Chat, Email Object, Generic Object.

Date/Time

dIntervalStart

The date and time for each date included in the date range selected for this report. The date can be displayed as interval, hour, day, week or month.

Ints Ans

NAnsweredACD

The number of ACD interactions that were answered.

Avg Talk

tTalkACD / nAnsweredACD

The average amount of time spent on the incoming ACD interactions.

Total Talk

tTalkACD

The total amount of time spent on incoming ACD interactions.

Note tTalkACD is the time an interaction is active with an agent, including any Hold time with the agent during the interaction.

Avg ACW

TACW / nAnsweredACD

The average amount of time the agents in the queue spent on After Call

		Work.
Total ACW	TACW	The total amount of time the agents in the queue spent on After Call Work
Ints Aban	NAbandonedACD	The number of interactions abandoned while waiting for an agent.
Avg Aband Time	$TAbandonedACD / nAbandonedACD$	The average amount of time the interaction spent in the queue before it was abandoned.
Perc Aband	$(NAbandonedACD / nEnteredACD) * 100$	The percentage of interactions that were abandoned in the queue.
Max Wait Ans	MtAnswered	The maximum number of seconds a interaction was in the queue before it was answered.
Flexible Field 1: Avg Wait Ans	$TAnsweredACD/nAnsweredACD$	Default Flexible Field: The average amount of time all interactions spent in the workgroup queue before being answered by an agent.
Flexible Field 1: Svc Lvl 1 %	$(NAnsweredACDSvcLvl1 / nAnsweredACD) * 100$	Flexible Field: The percentage of calls that were answered within the first service level. The first service level interval is determined in Interactive Administrator and the default first service level is 10 seconds.
Flexible Field 1: Load Ratio	$tTalkACD / tAgentOnACDCall$	Flexible Field: The ratio of total ACD talk time to the amount of time actually worked during the selected interval. This ratio is most meaningful when agents are allowed to take multiple interactions at the same time.
Flexible Field 1: Load – Hold	$(tTalkACD - tHoldACD) / (tAgentOnACDCall + tAgentInACW)$	Flexible Field: The ratio of total ACD talk time minus the time the interactions were on hold to the amount of time actually worked during the selected interval. This ratio is most meaningful when agents are allowed to take multiple interactions at the same time.
Flexible Field 1: Disconnect	NLocalDisconnectACD	Flexible Field: The number of ACD calls that were disconnected locally.
Flexible Field 2: Avg Wait Ans	$TAnsweredACD / nAnsweredACD$	Flexible Field: The average amount of time all interactions spent in the

		workgroup queue before being answered by an agent.
Flexible Field 2: Svc Lvl 1 %	$(N_{\text{AnsweredACDSvcLvl1}} / n_{\text{AnsweredACD}}) * 100$	Default Flexible Field: The percentage of calls that were answered within the first service level. The first service level interval is determined in Interactive Administrator and the default first service level is 10 seconds.
Flexible Field 2: Load Ratio	$t_{\text{TalkACD}} / (t_{\text{AgentOnACDCall}} + t_{\text{AgentInACW}})$	Flexible Field: The ratio of total ACD talk time to the amount of time actually worked during the selected interval. This ratio is most meaningful when agents are allowed to take multiple interactions at the same time.
Flexible Field 2: Load – Hold	$(t_{\text{TalkACD}} - t_{\text{HoldACD}}) / (t_{\text{AgentOnACDCall}} + t_{\text{AgentInACW}})$	Flexible Field: The ratio of total ACD talk time minus the time the interactions were on hold to the amount of time actually worked during the selected interval. This ratio is most meaningful when agents are allowed to take multiple interactions at the same time.
Flexible Field 2: Disconnect	$N_{\text{LocalDisconnectACD}}$	Flexible Field: The number of ACD calls that were disconnected locally.
Flexible Field 3: Avg Wait Ans	$T_{\text{AnsweredACD}} / n_{\text{AnsweredACD}}$	Flexible Field: The average amount of time all interactions spent in the workgroup queue before being answered by an agent.
Flexible Field 3: Svc Lvl 1 %	$(N_{\text{AnsweredACDSvcLvl1}} / n_{\text{AnsweredACD}}) * 100$	Flexible Field: The percentage of calls that were answered within the first service level. The first service level interval is determined in Interactive Administrator and the default first service level is 10 seconds.
Flexible Field 3: Load Ratio	$t_{\text{TalkACD}} / (t_{\text{AgentOnACDCall}} + t_{\text{AgentInACW}})$	Default Flexible Field: The ratio of total ACD talk time to the amount of time actually worked during the selected interval. This ratio is most meaningful when agents are allowed to take multiple interactions at the same time.

Flexible Field 3: Load – Hold $(tTalkACD - tHoldACD) / (tAgentOnACDCall + tAgentInACW)$

Flexible Field: The ratio of total ACD talk time minus the time the interactions were on hold to the amount of time actually worked during the selected interval. This ratio is most meaningful when agents are allowed to take multiple interactions at the same time.

Flexible Field 3: Disconnect NLocalDisconnectACD

Flexible Field: The number of ACD calls that were disconnected locally.

Record Selection Criteria:

{QueueStats.dIntervalStart} in {?DateTime}

and

{QueueStats.cType} = {QueueStats.cType}

and

{QueueStats.cName} in {?Workgroup}

and

{QueueStats.SiteId} in {?SiteId}

AND

{@StatusTime} IN {?ShiftTime}

AND {QueueStats.cHKey4}="*"

and

if {?Reportnumber}<=3 then

{QueueStats.cReportgroup}="*"

Else

{QueueStats.cHKey3}<>"*"

Formulas:

Ints Ans = The sum of ACD interactions answered for the queue and date range.

Avg Talk = The total incoming ACD talk time divided by the number of ACD interactions answered for the specified queue and date range.

Total Talk = The sum of talk time for interactions answered for the queue and date range.

Avg ACW = The total amount of time the agents in the queue spent on after call work divided by the total number of ACD interactions answered for the specified statistics group and date range.

Total ACW = The total amount of time the agents in the queue spent on after call work.

IntsAban = The sum of ACD interactions abandoned in the queue before connecting to an agent for the specified queue and date range.

Avg Aban = The total amount of time the abandoned interactions spent in an alerting status divided by the total number of ACD interactions that were abandoned for the specified statistics group and date range.

% Aband = The total number of ACD interactions that were abandoned divided by the total number of interactions that entered the ACD queue for the specified queue and date range. This number is multiplied by 100 to give the percentage.

Max Wait Ans = The maximum amount of time a interaction waited in the queue before being answered.

Avg Wait Ans = The total amount of time the interactions were in queue before reaching a client connected state divided by the total number of ACD interactions answered for the specified queue and date range.

% Srv Level = The total number of ACD interactions that were answered within the first service level divided by the total number of ACD interactions that were answered. This number is then multiplied by 100 to give the percentage.

Load Ratio = The total amount of time an agent is in the queue spent on ACD related interactions divided by the amount of time the agent was on an ACD interaction. In a multiple interaction environment, an agent's total talk time can exceed the time of the interval. This ratio is the amount of total talk time during an interval divided by the actual amount of time in the interval the agent spent on ACD related activities.

Load – Hold = The total amount of time an agent spent on ACD related interactions minus the amount of the ACD interactions were on hold divided by the amount of time the agent was in the an agent on an ACD interaction plus the amount of time the agent was in an ACW state. In a multiple interaction environment, an agent's total talk time can exceed the time of the interval. This ratio is the amount of total talk time during an interval divided by the actual amount of time in the interval the agent spent on ACD related activities.

Disconnect = The sum of the ACD interactions that were disconnected locally.

All times are expressed as hh:mm:ss. This formula is used throughout the report to convert seconds to hh:mm:ss. This formula is external to the report file.

Distribution Queue Performance (Queue by Date by Interaction Type) Report

This report allows you to see a detailed view of queue activity with a breakdown by date and interaction. It includes such information as interactions answered, total talk time, average talk times, and average speed of answer. It also shows information on ACW time and Abandons.

The report has Flexible Fields that are configurable in Interaction Administrator. By default, IC displays Average Wait to Answer, Percentage of Calls Answered in First Service Level and the Load Ratio in these flexible fields, but you can easily change these fields in Interaction Administrator, to show other values.

		including any Hold time with the agent during the interaction.
Avg ACW	$tACW / nAnsweredACD$	The average amount of time the agents in the queue spent on After Call Work.
Total ACW	$tACW$	The total amount of time the agents in the queue spent on After Call Work
Ints Aban	$nAbandonedACD$	The number of interactions abandoned while waiting for an agent.
Avg Aband Time	$tAbandonedACD / nAbandonedACD$	The average amount of time the interaction spent in the queue before it was abandoned.
Perc Aband	$(nAbandonedACD / nEnteredACD) * 100$	The percentage of interactions that were abandoned in the queue.
Max Wait Ans	$mtAnswered$	The maximum number of seconds a interaction was in the queue before it was answered.
Flexible Field 1: Avg Wait Ans	$tAnsweredACD / nAnsweredACD$	Default Flexible Field: The average amount of time all interactions spent in the workgroup queue before being answered by an agent.
Flexible Field 1: Svc Lvl 1 %	$(nAnsweredACDSvcLvl1 / nAnsweredACD) * 100$	Flexible Field: The percentage of calls that were answered within the first service level. The first service level interval is determined in Interactive Administrator and the default first service level is 10 seconds.
Flexible Field 1: Load Ratio	$tTalkACD / (tAgentOnACDCall+tAgentInACW)$	Flexible Field: The ratio of total ACD talk time to the amount of time actually worked during the selected interval. This ratio is most meaningful when agents are allowed to take multiple interactions at the same time.
Flexible Field 1: Load – Hold	$(tTalkACD - tHoldACD) / (tAgentOnACDCall+tAgentInACW)$	Flexible Field: The ratio of total ACD talk time minus the time the interactions were on hold to the amount of time actually worked during the selected interval. This ratio is most meaningful when agents are allowed to take multiple interactions at the same time.

Flexible Field 1: Disconnect	$nLocalDisconnectACD$	Flexible Field: The number of ACD calls that were disconnected locally.
Flexible Field 2: Avg Wait Ans	$tAnsweredACD / nAnsweredACD$	Flexible Field: The average amount of time all interactions spent in the workgroup queue before being answered by an agent.
Flexible Field 2: Svc Lvl 1 %	$(nAnsweredACDSvcLvl1 / nAnsweredACD) * 100$	Default Flexible Field: The percentage of calls that were answered within the first service level. The first service level interval is determined in Interactive Administrator and the default first service level is 10 seconds.
Flexible Field 2: Load Ratio	$tTalkACD / tAgentOnACDCall$	Flexible Field: The ratio of total ACD talk time to the amount of time actually worked during the selected interval. This ratio is most meaningful when agents are allowed to take multiple interactions at the same time.
Flexible Field 2: Load – Hold	$(tTalkACD - tHoldACD) / (tAgentOnACDCall + tAgentInACW)$	Flexible Field: The ratio of total ACD talk time minus the time the interactions were on hold to the amount of time actually worked during the selected interval. This ratio is most meaningful when agents are allowed to take multiple interactions at the same time.
Flexible Field 2: Disconnect	$nLocalDisconnectACD$	Flexible Field: The number of ACD calls that were disconnected locally.
Flexible Field 3: Avg Wait Ans	$tAnsweredACD / nAnsweredACD$	Flexible Field: The average amount of time all interactions spent in the workgroup queue before being answered by an agent.
Flexible Field 3: Svc Lvl 1 %	$(nAnsweredACDSvcLvl1 / nAnsweredACD) * 100$	Flexible Field: The percentage of calls that were answered within the first service level. The first service level interval is determined in Interactive Administrator and the default first service level is 10 seconds.

Flexible Field 3: Load Ratio	$\frac{tTalkACD}{(tAgentOnACDCall+tAgentInACW)}$	Default Flexible Field: The ratio of total ACD talk time to the amount of time actually worked during the selected interval. This ratio is most meaningful when agents are allowed to take multiple interactions at the same time.
Flexible Field 3: Load – Hold	$\frac{(tTalkACD - tHoldACD)}{(tAgentOnACDCall+tAgentInACW)}$	Flexible Field: The ratio of total ACD talk time minus the time the interactions were on hold to the amount of time actually worked during the selected interval. This ratio is most meaningful when agents are allowed to take multiple interactions at the same time.
Flexible Field 3: Disconnect	nLocalDisconnectACD	Flexible Field: The number of ACD calls that were disconnected locally.

This ratio is the amount of total talk time during an interval divided by the actual amount of time in the interval the agent spent on ACD related activities.

Disconnect = The sum of the ACD interactions that were disconnected locally.

All times are expressed as hh:mm:ss. This formula is used throughout the report to convert seconds to hh:mm:ss. This formula is external to the report file.

Distribution Queue Performance (Queue by Date by Interval) Report

This report allows you to see a detail view of queue activity grouped by date. This report also allows a supervisor to compare intervals for a particular day on a particular queue. It includes such information as interactions answered, total talk time, average talk times, and average speed of answer. It also shows information on ACW time and Abandons.

The report has Flexible Fields that are configurable in Interaction Administrator. By default, IC displays Average Wait to Answer, Percentage of Calls Answered in First Service Level and the Load Ratio in these flexible fields, but you can easily change these fields in Interaction Administrator, to show other values.

Parameters

You specify the range of queues, dates and time, shift times, and site IDs as parameters. You can specify all or part of a day in the time range. The report is based on a logging subsystem that is updated every 10 seconds plus time dependent on implementation architecture or topology.

This report sorts the information by queue, date/time, and then by interval, in ascending order.

The screenshot shows a 'Sample Report' header with the GENESYS logo. Below the header is a table with columns: Queue, Date/Time, Answered ACD, Avg Talk, Total Talk, and % Total Answered. The table contains several rows of data for different queues and time intervals.

Report Element

Report Field or Value

Field or Value Description

Site ID

SiteID

The name of the Site ID as specified in the range.

Queue

cName

The queue name as specified in the queue range.

Media Type

chKey3

The name of the various media types, Call, Chat, Email Object, Generic Object.

Date/Time

dIntervalStart

The date and time for each date included in the date range selected for this report. The date can be displayed as interval, hour, day, week or month.

Ints Ans

nAnsweredACD

The number of ACD interactions that were answered.

Avg Talk

tTalkACD / nAnsweredACD

The average amount of time spent on the incoming ACD interactions.

Total Talk

tTalkACD

The total amount of time spent on incoming ACD interactions.

Note tTalkACD is the time an interaction is active with an agent, including any Hold time with the agent

		during the interaction.
Avg ACW	$tACW / nAnsweredACD$	The average amount of time the agents in the queue spent on After Call Work.
Total ACW	$tACW$	The total amount of time the agents in the queue spent on After Call Work
Ints Aban	$nAbandonedACD$	The number of interactions abandoned while waiting for an agent.
Avg Aband Time	$tAbandonedACD / nAbandonedACD$	The average amount of time the interaction spent in the queue before it was abandoned.
Perc Aband	$(nAbandonedACD / nEnteredACD) * 100$	The percentage of interactions that were abandoned in the queue.
Max Wait Ans	$mtAnswered$	The maximum number of seconds a interaction was in the queue before it was answered.
Flexible Field 1: Avg Wait Ans	$tAnsweredACD / nAnsweredACD$	Default Flexible Field: The average amount of time all interactions spent in the workgroup queue before being answered by an agent.
Flexible Field 1: Svc Lvl 1 %	$(nAnsweredACDSvcLvl1 / nAnsweredACD) * 100$	Flexible Field: The percentage of calls that were answered within the first service level. The first service level interval is determined in Interactive Administrator and the default first service level is 10 seconds.
Flexible Field 1: Load Ratio	$tTalkACD / tAgentOnACDCall$	Flexible Field: The ratio of total ACD talk time to the amount of time actually worked during the selected interval. This ratio is most meaningful when agents are allowed to take multiple interactions at the same time.
Flexible Field 1: Load – Hold	$(tTalkACD - tHoldACD) / (tAgentOnACDCall + tAgentInACW)$	Flexible Field: The ratio of total ACD talk time minus the time the interactions were on hold to the amount of time actually worked during the selected interval. This ratio is most meaningful when agents are allowed to take multiple interactions at the same time.
Flexible Field 1: Disconnect	$nLocalDisconnectACD$	Flexible Field: The number of ACD calls

		that were disconnected locally.
Flexible Field 2: Avg Wait Ans	$t_{\text{AnsweredACD}} / n_{\text{AnsweredACD}}$	Flexible Field: The average amount of time all interactions spent in the workgroup queue before being answered by an agent.
Flexible Field 2: Svc Lvl 1 %	$(n_{\text{AnsweredACDSvcLvl1}} / n_{\text{AnsweredACD}}) * 100$	Default Flexible Field: The percentage of calls that were answered within the first service level. The first service level interval is determined in Interactive Administrator and the default first service level is 10 seconds.
Flexible Field 2: Load Ratio	$t_{\text{TalkACD}} / t_{\text{AgentOnACDCall}}$	Flexible Field: The ratio of total ACD talk time to the amount of time actually worked during the selected interval. This ratio is most meaningful when agents are allowed to take multiple interactions at the same time.
Flexible Field 2: Load – Hold	$(t_{\text{TalkACD}} - t_{\text{HoldACD}}) / (t_{\text{AgentOnACDCall}} + t_{\text{AgentInACW}})$	Flexible Field: The ratio of total ACD talk time minus the time the interactions were on hold to the amount of time actually worked during the selected interval. This ratio is most meaningful when agents are allowed to take multiple interactions at the same time.
Flexible Field 2: Disconnect	$n_{\text{LocalDisconnectACD}}$	Flexible Field: The number of ACD calls that were disconnected locally.
Flexible Field 3: Avg Wait Ans	$t_{\text{AnsweredACD}} / n_{\text{AnsweredACD}}$	Flexible Field: The average amount of time all interactions spent in the workgroup queue before being answered by an agent.
Flexible Field 3: Svc Lvl 1 %	$(n_{\text{AnsweredACDSvcLvl1}} / n_{\text{AnsweredACD}}) * 100$	Flexible Field: The percentage of calls that were answered within the first service level. The first service level interval is determined in Interactive Administrator and the default first service level is 10 seconds.
Flexible Field 3: Load Ratio	$t_{\text{TalkACD}} / t_{\text{AgentOnACDCall}}$	Default Flexible Field: The ratio of total ACD talk time to the amount of time actually worked during the selected

interval. This ratio is most meaningful when agents are allowed to take multiple interactions at the same time.

Flexible Field 3: Load – Hold $(tTalkACD - tHoldACD) / (tAgentOnACDCall + tAgentInACW)$

Flexible Field: The ratio of total ACD talk time minus the time the interactions were on hold to the amount of time actually worked during the selected interval. This ratio is most meaningful when agents are allowed to take multiple interactions at the same time.

Flexible Field 3: Disconnect $nLocalDisconnectACD$

Flexible Field: The number of ACD calls that were disconnected locally.

Record Selection Criteria:

{{QueueStats.dIntervalStart} in {?DateTime} and
{QueueStats.cType} = {QueueStats.cType} and
{QueueStats.cReportgroup} in {?ReportGroup} and
{QueueStats.SiteId} in {?SiteId} and
{@StatusTime} IN {?ShiftTime} and
{QueueStats.cReportGroup} <> "-" and
(IsNull({QueueStats.cHKey3}) or {QueueStats.cHKey3} = "*" or {QueueStats.cHKey3} = "") and
(IsNull({QueueStats.cHKey4}) or {QueueStats.cHKey4} = "*" or {QueueStats.cHKey4} = "") and
{QueueStats.cName} = {?Workgroup}

Formulas:

Ints Ans = The sum of ACD interactions answered for the queue and date range.

Avg Talk = The total incoming ACD talk time divided by the number of ACD interactions answered for the specified queue and date range.

Total Talk = The sum of talk time for interactions answered for the queue and date range.

Avg ACW = The total amount of time the agents in the queue spent on after call work divided by the total number of ACD interactions answered for the specified statistics group and date range.

Total ACW = The total amount of time the agents in the queue spent on after call work.

IntsAban = The sum of ACD interactions abandoned in the queue before connecting to an agent for the specified queue and date range.

Avg Aban = The total amount of time the abandoned interactions spent in an alerting status divided by the total number of ACD interactions that were abandoned for the specified statistics group and date range.

% Aband = The total number of ACD interactions that were abandoned divided by the total number of interactions that entered the ACD queue for the specified queue and date range. This number is multiplied by 100 to give the percentage.

Max Wait Ans = The maximum amount of time a interaction waited in the queue before being answered.

Avg Wait Ans = The total amount of time the interactions were in queue before reaching a client connected state divided by the total number of ACD interactions answered for the specified queue and date range.

% Srv Level = The total number of ACD interactions that were answered within the first service level divided by the total number of ACD interactions that were answered. This number is then multiplied by 100 to give the percentage.

Load Ratio = The total amount of time an agent is in the queue spent on ACD related interactions divided by the amount of time the agent was on an ACD interaction. In a multiple interaction environment, an agent's total talk time can exceed the time of the interval. This ratio is the amount of total talk time during an interval divided by the actual amount of time in the interval the agent spent on ACD related activities.

Load – Hold = The total amount of time an agent spent on ACD related interactions minus the amount of the ACD interactions were on hold divided by the amount of time the agent was in the an agent on an ACD interaction plus the amount of time the agent was in an ACW state. In a multiple interaction environment, an agent's total talk time can exceed the time of the interval. This ratio is the amount of total talk time during an interval divided by the actual amount of time in the interval the agent spent on ACD related activities.

Disconnect = The sum of the ACD interactions that were disconnected locally.

All times are expressed as hh:mm:ss. This formula is used throughout the report to convert seconds to hh:mm:ss. This formula is external to the report file.

Report Field or Value

Field or Value Description

Site ID

SiteID

The name of the Site ID as specified in the range.

Queue

cName

The queue name as specified in the queue range.

Media Type

cHKey3

The name of the various media types, Call, Chat, Email Object, Generic Object.

Date/Time

dIntervalStart

The date and time for each date included in the date range selected for this report. The date can be displayed as interval, hour, day, week or month.

Ints Ans

nAnsweredACD

The number of ACD interactions that were answered.

Avg Talk

tTalkACD / nAnsweredACD

The average amount of time spent on the incoming ACD interactions.

Total Talk

tTalkACD

The total amount of time spent on incoming ACD interactions.

Note tTalkACD is the time an interaction is active with an agent, including any Hold time with the agent during the interaction.

Avg ACW

TACW / nAnsweredACD

The average amount of time the agents in the queue spent on After Call Work.

Total ACW	TACW	The total amount of time the agents in the queue spent on After call Work
Ints Aban	nAbandonedACD	The number of interactions abandoned while waiting for an agent.
Avg Aband Time	$T_{AbandonedACD} / n_{AbandonedACD}$	The average amount of time the interaction spent in the queue before it was abandoned.
Perc Aband	$(n_{AbandonedACD} / n_{EnteredACD}) * 100$	The percentage of interactions that were abandoned in the queue.
Max Wait Ans	mtAnswered	The maximum number of seconds a interaction was in the queue before it was answered.
Flexible Field 1: Avg Wait Ans	$t_{AnsweredACD} / n_{AnsweredACD}$	Default Flexible Field: The average amount of time all interactions spent in the workgroup queue before being answered by an agent.
Flexible Field 1: Svc Lvl 1 %	$(n_{AnsweredACDSvcLvl1} / n_{AnsweredACD}) * 100$	Flexible Field: The percentage of calls that were answered within the first service level. The first service level interval is determined in Interactive Administrator and the default first service level is 10 seconds.
Flexible Field 1: Load Ratio	$t_{TalkACD} / t_{AgentOnACDCall}$	Flexible Field: The ratio of total ACD talk time to the amount of time actually worked during the selected interval. This ratio is most meaningful when agents are allowed to take multiple interactions at the same time.
Flexible Field 1: Load – Hold	$(t_{TalkACD} - t_{HoldACD}) / (t_{AgentOnACDCall} + t_{AgentInACW})$	Flexible Field: The ratio of total ACD talk time minus the time the interactions were on hold to the amount of time actually worked during the selected interval. This ratio is most meaningful when agents are allowed to take multiple interactions at the same time.
Flexible Field 1: Disconnect	nLocalDisconnectACD	Flexible Field: The number of ACD calls that were disconnected locally.
Flexible Field 2: Avg Wait Ans	$t_{AnsweredACD} / n_{AnsweredACD}$	Flexible Field: The average amount of time all interactions spent in the workgroup queue before being answered by an agent.

Flexible Field 2: Svc Lvl 1 %	$(n\text{AnsweredACDSvcLvl1} / n\text{AnsweredACD}) * 100$	Default Flexible Field: The percentage of calls that were answered within the first service level. The first service level interval is determined in Interactive Administrator and the default first service level is 10 seconds.
Flexible Field 2: Load Ratio	$t\text{TalkACD} / (t\text{AgentOnACDCall} + t\text{AgentInACW})$	Flexible Field: The ratio of total ACD talk time to the amount of time actually worked during the selected interval. This ratio is most meaningful when agents are allowed to take multiple interactions at the same time.
Flexible Field 2: Load – Hold	$(t\text{TalkACD} - t\text{HoldACD}) / (t\text{AgentOnACDCall} + t\text{AgentInACW})$	Flexible Field: The ratio of total ACD talk time minus the time the interactions were on hold to the amount of time actually worked during the selected interval. This ratio is most meaningful when agents are allowed to take multiple interactions at the same time.
Flexible Field 2: Disconnect	$n\text{LocalDisconnectACD}$	Flexible Field: The number of ACD calls that were disconnected locally.
Flexible Field 3: Avg Wait Ans	$t\text{AnsweredACD} / n\text{AnsweredACD}$	Flexible Field: The average amount of time all interactions spent in the workgroup queue before being answered by an agent.
Flexible Field 3: Svc Lvl 1 %	$(n\text{AnsweredACDSvcLvl1} / n\text{AnsweredACD}) * 100$	Flexible Field: The percentage of calls that were answered within the first service level. The first service level interval is determined in Interactive Administrator and the default first service level is 10 seconds.
Flexible Field 3: Load Ratio	$t\text{TalkACD} / (t\text{AgentOnACDCall} + t\text{AgentInACW})$	Default Flexible Field: The ratio of total ACD talk time to the amount of time actually worked during the selected interval. This ratio is most meaningful when agents are allowed to take multiple interactions at the same time.

Flexible Field 3: Load – Hold $(tTalkACD - tHoldACD) / (tAgentOnACDCall + tAgentInACW)$

Flexible Field: The ratio of total ACD talk time minus the time the interactions were on hold to the amount of time actually worked during the selected interval. This ratio is most meaningful when agents are allowed to take multiple interactions at the same time.

Flexible Field 3: Disconnect $nLocalDisconnectACD$

Flexible Field: The number of ACD calls that were disconnected locally.

Record Selection Criteria:

{{QueueStats.dIntervalStart} in {?DateTime} and
{QueueStats.cType} = {QueueStats.cType} and
{QueueStats.cReportgroup} in {?ReportGroup} and
{QueueStats.Siteld} in {?Siteld} and
{@StatusTime} IN {?ShiftTime} and
{QueueStats.cReportGroup} <> "-" and
(IsNull({QueueStats.cHKey3}) or {QueueStats.cHKey3} = "*" or {QueueStats.cHKey3} = "") and
(IsNull({QueueStats.cHKey4}) or {QueueStats.cHKey4} = "*" or {QueueStats.cHKey4} = "") and
{QueueStats.cName} = {?Workgroup}

Formulas:

Ints Ans = The sum of ACD interactions answered for the queue and date range.

Avg Talk = The total incoming ACD talk time divided by the number of ACD interactions answered for the specified queue and date range.

Total Talk = The sum of talk time for interactions answered for the queue and date range.

Avg ACW = The total amount of time the agents in the queue spent on after call work divided by the total number of ACD interactions answered for the specified statistics group and date range.

Total ACW = The total amount of time the agents in the queue spent on after call work.

IntsAban = The sum of ACD interactions abandoned in the queue before connecting to an agent for the specified queue and date range.

Avg Aban = The total amount of time the abandoned interactions spent in an alerting status divided by the total number of ACD interactions that were abandoned for the specified statistics group and date range.

% Aband = The total number of ACD interactions that were abandoned divided by the total number of interactions that entered the ACD queue for the specified queue and date range. This number is multiplied by 100 to give the percentage.

Max Wait Ans = The maximum amount of time a interaction waited in the queue before being answered.

Avg Wait Ans = The total amount of time the interactions were in queue before reaching a client connected state divided by the total number of ACD interactions answered for the specified queue and date range.

% Srv Level = The total number of ACD interactions that were answered within the first service level divided by the total number of ACD interactions that were answered. This number is then multiplied by 100 to give the percentage.

Load Ratio = The total amount of time an agent is in the queue spent on ACD related interactions divided by the amount of time the agent was on an ACD interaction. In a multiple interaction environment, an agent's total talk time can exceed the time of the interval. This ratio is the amount of total talk time during an interval divided by the actual amount of time in the interval the agent spent on ACD related activities.

Load – Hold = The total amount of time an agent spent on ACD related interactions minus the amount of the ACD interactions were on hold divided by the amount of time the agent was in the an agent on an ACD interaction plus the amount of time the agent was in an ACW state. In a multiple interaction environment, an agent's total talk time can exceed the time of the interval. This ratio is the amount of total talk time during an interval divided by the actual amount of time in the interval the agent spent on ACD related activities.

Disconnect = The sum of the ACD interactions that were disconnected locally.

All times are expressed as hh:mm:ss. This formula is used throughout the report to convert seconds to hh:mm:ss. This formula is external to the report file.

Distribution Queue Performance (Queue by Interaction Type) Report

This report allows you to see a detailed view of queue activity grouped by interaction type. It includes such information as interactions answered, total talk time, and average speed of answer, average wait time. It also shows information on ACW time and Abandons.

The report has Flexible Fields that are configurable in Interaction Administrator. By default, IC displays Average Wait to Answer, Percentage of Calls Answered in First Service Level and the Load Ratio in these flexible fields, but you can easily change these fields in Interaction Administrator, to show other values.

Parameters

You specify the range of queues, dates and time, shift times, and site IDs as parameters. You can specify all or part of a day in the time range. The report is based on a logging subsystem that is updated every 10 seconds plus time dependent on implementation architecture or topology.

This report sorts the information by queue and then by media type, in ascending order.

Sample report

Click on the image below to view a sample of this report.

The screenshot shows a 'Sample Report' from Genesys. The report title is 'IWrkgrpQueueStats' and the data source is 'QPS_DS_QUEUE_MEDIATYPE'. The table contains 12 columns: Site ID, Queue, Media Type, Date/Time, Ints Ans, Avg Talk, Total Talk, Avg ACW, Total ACW, Ints Aban, and two columns for 'Performance' (n and %). The data is grouped by Site ID and Queue, with rows for different Media Types and Date/Time intervals.

Report Element

Report Field or Value

Field or Value Description

Site ID

SiteID

The name of the Site ID as specified in the range.

Queue

cName

The queue name as specified in the queue range.

Media Type

chKey3

The name of the various media types, Call, Chat, Email Object, Generic Object.

Date/Time

dIntervalStart

The date and time for each date included in the date range selected for this report. The date can be displayed as interval, hour, day, week or month.

Ints Ans

nAnsweredACD

The number of ACD interactions that were answered.

Avg Talk

tTalkACD / nAnsweredACD

The average amount of time spent on the incoming ACD interactions.

Total Talk

tTalkACD

The total amount of time spent on incoming ACD interactions.

Note tTalkACD is the time an interaction is active with an agent, including any Hold time with the agent during the interaction.

Avg ACW

tACW / nAnsweredACD

The average amount of time the agents in the queue spent on After Call Work.

Total ACW

tACW

The total amount of time the agents in the queue spent on After Call Work

Ints Aban

nAbandonedACD

The number of interactions abandoned

		while waiting for an agent.
Avg Aband Time	$tAbandonedACD / nAbandonedACD$	The average amount of time the interaction spent in the queue before it was abandoned.
Perc Aband	$(nAbandonedACD / nEnteredACD) * 100$	The percentage of interactions that were abandoned in the queue.
Max Wait Ans	mtAnswered	The maximum number of seconds a interaction was in the queue before it was answered.
Flexible Field 1: Avg Wait Ans	$tAnsweredACD / nAnsweredACD$	Default Flexible Field: The average amount of time all interactions spent in the workgroup queue before being answered by an agent.
Flexible Field 1: Svc Lvl 1 %	$(nAnsweredACDSvcLvl1 / nAnsweredACD) * 100$	Flexible Field: The percentage of calls that were answered within the first service level. The first service level interval is determined in Interactive Administrator and the default first service level is 10 seconds.
Flexible Field 1: Load Ratio	$tTalkACD / tAgentOnACDCall$	Flexible Field: The ratio of total ACD talk time to the amount of time actually worked during the selected interval. This ratio is most meaningful when agents are allowed to take multiple interactions at the same time.
Flexible Field 1: Load – Hold	$(tTalkACD - tHoldACD) / (tAgentOnACDCall + tAgentInACW)$	Flexible Field: The ratio of total ACD talk time minus the time the interactions were on hold to the amount of time actually worked during the selected interval. This ratio is most meaningful when agents are allowed to take multiple interactions at the same time.
Flexible Field 1: Disconnect	nLocalDisconnectACD	Flexible Field: The number of ACD calls that were disconnected locally.
Flexible Field 2: Avg Wait Ans	$tAnsweredACD / nAnsweredACD$	Flexible Field: The average amount of time all interactions spent in the workgroup queue before being answered by an agent.

Flexible Field 2: Svc Lvl 1 %	$(n\text{AnsweredACDSvcLvl1} / n\text{AnsweredACD}) * 100$	Default Flexible Field: The percentage of calls that were answered within the first service level. The first service level interval is determined in Interactive Administrator and the default first service level is 10 seconds.
Flexible Field 2: Load Ratio	$t\text{TalkACD} / (t\text{AgentOnACDCall} + t\text{AgentInACW})$	Flexible Field: The ratio of total ACD talk time to the amount of time actually worked during the selected interval. This ratio is most meaningful when agents are allowed to take multiple interactions at the same time.
Flexible Field 2: Load – Hold	$(t\text{TalkACD} - t\text{HoldACD}) / (t\text{AgentOnACDCall} + t\text{AgentInACW})$	Flexible Field: The ratio of total ACD talk time minus the time the interactions were on hold to the amount of time actually worked during the selected interval. This ratio is most meaningful when agents are allowed to take multiple interactions at the same time.
Flexible Field 2: Disconnect	$n\text{LocalDisconnectACD}$	Flexible Field: The number of ACD calls that were disconnected locally.
Flexible Field 3: Avg Wait Ans	$t\text{AnsweredACD} / n\text{AnsweredACD}$	Flexible Field: The average amount of time all interactions spent in the workgroup queue before being answered by an agent.
Flexible Field 3: Svc Lvl 1 %	$(n\text{AnsweredACDSvcLvl1} / n\text{AnsweredACD}) * 100$	Flexible Field: The percentage of calls that were answered within the first service level. The first service level interval is determined in Interactive Administrator and the default first service level is 10 seconds.
Flexible Field 3: Load Ratio	$t\text{TalkACD} / (t\text{AgentOnACDCall} + t\text{AgentInACW})$	Default Flexible Field: The ratio of total ACD talk time to the amount of time actually worked during the selected interval. This ratio is most meaningful when agents are allowed to take multiple interactions at the same time.

Flexible Field 3: Load – Hold
$$\frac{(tTalkACD - tHoldACD)}{(tAgentOnACDCall + tAgentInACW)}$$
 Flexible Field: The ratio of total ACD talk time minus the time the interactions were on hold to the amount of time actually worked during the selected interval. This ratio is most meaningful when agents are allowed to take multiple interactions at the same time.

Flexible Field 3: Disconnect $nLocalDisconnectACD$ Flexible Field: The number of ACD calls that were disconnected locally.

Record Selection Criteria:

{{QueueStats.dIntervalStart} in {?DateTime} and
 {QueueStats.cType} = {QueueStats.cType} and
 {QueueStats.cReportgroup} in {?ReportGroup} and
 {QueueStats.SiteId} in {?SiteId} and
 {@StatusTime} IN {?ShiftTime} and

 (IsNull({QueueStats.cHKey3}) or {QueueStats.cHKey3} = "*" or {QueueStats.cHKey3} = "") and
 (IsNull({QueueStats.cHKey4}) or {QueueStats.cHKey4} = "*" or {QueueStats.cHKey4} = "") and
 {QueueStats.cName} = {?Workgroup}

Formulas:

- Ints Ans = The sum of ACD interactions answered for the queue and date range.
- Avg Talk = The total incoming ACD talk time divided by the number of ACD interactions answered for the specified queue and date range.
- Total Talk = The sum of talk time for interactions answered for the queue and date range.
- Avg ACW = The total amount of time the agents in the queue spent on after call work divided by the total number of ACD interactions answered for the specified statistics group and date range.
- Total ACW = The total amount of time the agents in the queue spent on after call work.
- IntsAban = The sum of ACD interactions abandoned in the queue before connecting to an agent for the specified queue and date range.
- Avg Aban = The total amount of time the abandoned interactions spent in an alerting status divided by the total number of ACD interactions that were abandoned for the specified statistics group and date range.

% Aband = The total number of ACD interactions that were abandoned divided by the total number of interactions that entered the ACD queue for the specified queue and date range. This number is multiplied by 100 to give the percentage.

Max Wait Ans = The maximum amount of time a interaction waited in the queue before being answered.

Avg Wait Ans = The total amount of time the interactions were in queue before reaching a client connected state divided by the total number of ACD interactions answered for the specified queue and date range.

% Srv Level = The total number of ACD interactions that were answered within the first service level divided by the total number of ACD interactions that were answered. This number is then multiplied by 100 to give the percentage.

Load Ratio = The total amount of time an agent is in the queue spent on ACD related interactions divided by the amount of time the agent was on an ACD interaction. In a multiple interaction environment, an agent's total talk time can exceed the time of the interval. This ratio is the amount of total talk time during an interval divided by the actual amount of time in the interval the agent spent on ACD related activities.

Load – Hold = The total amount of time an agent spent on ACD related interactions minus the amount of the ACD interactions were on hold divided by the amount of time the agent was in the an agent on an ACD interaction plus the amount of time the agent was in an ACW state. In a multiple interaction environment, an agent's total talk time can exceed the time of the interval. This ratio is the amount of total talk time during an interval divided by the actual amount of time in the interval the agent spent on ACD related activities.

Disconnect = The sum of the ACD interactions that were disconnected locally.

All times are expressed as hh:mm:ss. This formula is used throughout the report to convert seconds to hh:mm:ss. This formula is external to the report file.

IVR Summary by Date Report

This summary reports by date, and displays IVR level name, interactions, duration, percent of calls by IVR level name, repeated calls, and percent of calls repeated.

Parameters

You specify a range of dates/time access, exit paths, time in menus, and other statistics to help analyze IVR menu effectiveness. IC sorts this report by Interaction Attendant application names and then by date.

```

Line Activity Summary by Day Report

This report compares day to day line activity in a summary. This report shows the call activity on the configured lines in a line group across several days. You can use this report to help determine individual lines that need further research based on information from the line group reports.

Important note for SIP users

The Line Group reports were *not* designed to report on a SIP Line configuration. As a result, the information calculated for the Line Group reports might not be accurate for SIP lines.

Parameters

You specify the range of dates and times, site IDs, and activity times as parameters. IC sorts this report by SiteID, LineID, then by dIntervalStart. The line identifiers are defined in Interaction Administrator on the IC server. You can specify all or part of a day in the time range.

The report is based on a logging subsystem that is updated every 10 seconds plus time dependent on implementation architecture or topology.

Line Activity Summary by Line Report

This report evaluates line activity for a day. This report shows the call activity for all lines in the specified range of line groups for a specified time and date range. Because this report generates a large amount of data, you should limit the number of days and lines that you select for the report.

Important note for SIP users

The Line Group reports were *not* designed to report on a SIP Line configuration. As a result, the information calculated for the Line Group reports might not be accurate for SIP lines.

Parameters

You specify the range of dates and times, site IDs, and activity times as parameters. IC sorts this report by SiteID, dIntervalStart, then by LineID. The line identifiers are defined in Interaction Administrator on the IC server. You can specify all or part of a day in the time range.

The report is based on a logging subsystem that is updated every 10 seconds plus time dependent on implementation architecture or topology.

Report Element

Report Field or Value

Field or Value Description

Site ID

SiteID

The name of the Site ID as specified in the range.

Line ID

LineID

The name of the line selected in the specified range.

Date

dIntervalStart

The date for each day in the specified

range.

Duration per Line	tResourcesAvailable	The amount of time the average line is available in the line group.
Utilization	tSeized	The amount of time that the lines in the line group were busy or seized.
% Utilization	$(tSeized / tResourceAvailable) * 100$	The percentage of time that the lines in the line group were busy or seized.
Total Calls	nEntered	The number of calls for each line group during the specified range.
Calls Out	nOutboundEntered	The number of outbound calls that entered the line group during the specified date / time range.
% of Calls Out	$nOutboundEntered / nEntered * 100$	The percentage of outbound calls that entered the line group during the specified date / time range.
Avg. Call Duration	tSeized / nEntered	The average amount of time each call occupied the line in the line group.
% Out Blocked	$(nOutboundBlocked / (nEnteredOutbound + nOutboundBlocked)) * 100$	The percentage of outbound calls that were blocked in a line group.

Record Selection Criteria for this report includes:

{LineGroupLines.GroupId} in {?StartLineGroup} to {?EndLineGroup} and
{LineStats.dIntervalStart} in {?StartDateTime} to {?EndDateTime} and
{LineGroupLines.SiteId} in {?StartSiteID} to {?EndSiteId} and
{LineGroupConfig.ReportFlag} = 1 and
{@DateTimeToTime} in {?StartActivityTime} to {?EndActivityTime}

Line Group Activity Summary by Day Report

This report shows the daily summary of line group activity.

Important note for SIP users

The Line Group reports were *not* designed to report on a SIP Line configuration. As a result, the information calculated for the Line Group reports might not be accurate for SIP lines.

Parameters

You specify the range of dates and times, site IDs, and line group identifiers as parameters. IC sorts this report by SiteID, GroupID, and dIntervalStart. The line identifiers are defined in Interaction Administrator on the IC server. You can specify all or part of a day in the time range.

The report is based on a logging subsystem that is updated every 10 seconds plus time dependent on implementation architecture or topology.

Sample report

Click on the image below to view a sample of this report.

The screenshot shows a 'Sample Report' header with the GENESYS logo. Below the header is a table with the following columns: SiteID, Date, Line Group, Avg Lines Available, nDuration, Max Avail Duration, tResourceAvailable, and % of Total Available. The table contains several rows of data for different site IDs and line groups, showing values for each of these metrics.

Report Element

Report Field or Value

Field or Value Description

Site ID

SiteID

The name of the Site ID as specified in the range.

Date

dIntervalStart

The date for each day in the specified range.

Line Group

GroupID

The name of the line group in the specified range. The * line group is the summary line group and includes the information for all the line groups.

GradeOfService

-1

By default, this parameter value is configured to -1. This value ensures that there will not be a return of no records selected if line groups for selected time are all zero.

Avg Lines Available

tResourceAvailable / nDuration
AverageLinesAvailable

The average number of lines available in the line group in the specified range.

Interval Start

dIntervalStart

The time the interval started.

Duration per Line

nDuration

The amount of time the average line is available in the line group.

Max Avail Duration

tResourceAvailable

The maximum time available for the

		entire line group.
Utilization	tSeized	The amount of time that the lines in the line group were busy or seized.
% Utilization	$(tSeized / tResourceAvailable) * 100$	The percentage of time that the lines in the line group were busy or seized.
Total Calls	nEntered	The total number of calls for each line group in the specified range.
Calls Out	nOutboundEntered	The number of outbound calls that entered the line group during the specified date / time range.
% of Calls Out	$nOutboundEntered / nEntered * 100$	The percentage of outbound calls that entered the line group during the specified date / time range.
Avg. Call Duration	$tSeized / nEntered$	The average amount of time each call occupied the line in the line group.
Max Calls Entered	mEntered	The maximum number of calls that entered the line group at the same time. This number can never exceed the number of lines available.
% All Busy	$(tAllBusy / tResourceAvailable) * 100$	The percentage of time that all the lines in the line group were blocked or seized.
% Out Blocked	$(nOutboundBlocked / (nEnteredOutbound + nOutboundBlocked)) * 100$	The percentage of outbound calls that were blocked in a line group.

Record Selection Criteria for this report includes:

{LineGroupStats.GroupId} in {?StartLineGroup} to {?EndLineGroup} and
 {LineGroupStats.dIntervalStart} in {?StartDateTime} to {?EndDateTime} and
 {LineGroupStats.SiteId} in {?StartSiteId} to {?EndSiteId} and
 ({LineGroupConfig.ReportFlag} = 1 or {LineGroupConfig.GroupID} = '*' and
 {@PercAllLinesBusy} > {@PercGradeOfService} and
 {LineGroupStats.tAllBusy} > ?

Line Group Activity Summary by Line Report

This report evaluates the line group activity for a day. This reports show call activity on the configured line groups across several days.

Important note for SIP users

The Line Group reports were *not* designed to report on a SIP Line configuration. As a result, the information calculated for the Line Group reports might not be accurate for SIP lines.

Parameters

You specify the range of dates and times, site IDs, and line group identifiers as parameters. IC sorts this report by SiteID, dIntervalStart, and GroupID. The line identifiers are defined in Interaction Administrator on the IC server. You can specify all or part of a day in the time range.

The report is based on a logging subsystem that is updated every 10 seconds plus time dependent on implementation architecture or topology.

Line Group All Trunks Busy for Interval By Grade of Service Report

This report shows all intervals during which a report line group had all lines busy, and the line group had a grade of service less than the grade of service report parameter value entered during runtime. Use this report to evaluate line traffic distribution and the need for line resources.

Important note for SIP users

The Line Group reports were *not* designed to report on a SIP Line configuration. As a result, the information calculated for the Line Group reports might not be accurate for SIP lines.

Parameters

You specify the range of dates and times, line group identifiers, site IDs, and grade of service as parameters. The line identifiers are defined in Interaction Administrator on the IC server. You can specify all or part of a day in the time range.

The report is based on a logging subsystem that is updated every 10 seconds plus time dependent on implementation architecture or topology.

In order to produce more readable graph output, select a narrow range of date / time parameters and one or more specific line identifiers.

Queue Period Statistics Abandon Report

The Queue Period Statistics (QPS) Abandon report displays the percentages of all ACD interactions abandoned at the various service level thresholds. The service level thresholds are determined by your settings in Interaction Administrator. This report includes interactions answered, interactions entering the queue, and the percentage of interactions abandoned at each service level threshold.

Parameters

You specify a range of queues, dates, site IDs and the shifts to report on. IC sorts this report by queue, then by date in ascending order, by default. To group or sort a report by other fields, on the **Enter Report Parameters** dialog use the **Report Sort/Group Order 4** page to specify another option.

Queue1	2010-01-01	1000	800	200	20%	...
Queue2	2010-01-02	1500	1200	300	20%	...

Report Element

Report Field or Value

Field or Value Description

Site ID

SiteID

The name of the Site ID as specified in the range

Queue

cReportGroup

The name of the distribution queue.

Date

dIntervalStart

The date or time of the interactions entered the distribution queue as specified in the date/time range.

Ints Offered

nEnteredACD

The number of ACD interactions that were offered to the queue.

Ints Answered

nansweredACD

The number of ACD interactions that were answered.

Ints Aband

nAbandonedACD

The number of ACD interactions that were abandoned in the queue.

Perc Aband

(nAbandonedACD /

The percentage of interactions that

	$nEnteredACD) * 100$	were abandoned in the queue.
Average Speed of Answer	$tAnsweredACD / nAnsweredACD$	Flexible Field - The average amount of time an interaction spent alerting before it was answered by the agent. The total amount of time the interactions were alerting the agents divided by the total number of ACD interactions answered for the specified range.
Avg Aband Time	$tAbandonedACD / nAbandonedACD$	Default Flexible Field - The average amount of time an interaction spent in the queue before it abandoned.
Local Disc.	$nLocalDisconnectAc$	The number of local disconnects. A local disconnect is defined as a disconnect by an IC agent/user or the IC system.
Service Threshold 1	$(nAnsweredACDSvcLv1 / nAnsweredACD) * 100$	The percentage of interactions that were answered within the first service level. The first service level interval is determined in Interactive Administrator and the default first service level is 10 seconds.
Service Threshold 2	$(nAnsweredACDSvcLv2 / nAnsweredACD) * 100$	The percentage of interactions that were answered within the second service level. The default second service level is 20 seconds.
Service Threshold 3	$(nAnsweredACDSvcLv3 / nAnsweredACD) * 100$	The percentage of interactions that were answered within the third service level.
Service Threshold 4	$(nAnsweredACDSvcLv4 / nAnsweredACD) * 100$	The percentage of interactions that were answered within the fourth service level.
Service Threshold 5	$(nAnsweredACDSvcLv5 / nAnsweredACD) * 100$	The percentage of interactions that were answered within the fifth service level.
Service Threshold 6	$(nAnsweredACDSvcLv6 / nAnsweredACD) * 100$	The percentage of interactions that were answered within the sixth service level.
Aband Svc Lvl 1	$(nAbandACDSvcLv1 / nEnteredACD) * 100$	The percentage of interactions that were abandoned with in the first service level.

Aband Svc Lvl 2	$(nAbandACDSvcLvl1 / nEnteredACD) * 100$	The percentage of interactions that were abandoned with in the first service level.
Aband Svc Lvl 3	$(nAbandACDSvcLvl1 / nEnteredACD) * 100$	The percentage of interactions that were abandoned with in the first service level.
Aband Svc Lvl 4	$(nAbandACDSvcLvl1 / nEnteredACD) * 100$	The percentage of interactions that were abandoned with in the first service level.
Aband Svc Lvl 5	$(nAbandACDSvcLvl1 / nEnteredACD) * 100$	The percentage of interactions that were abandoned with in the first service level.
Aband Svc Lvl 6	$(nAbandACDSvcLvl1 / nEnteredACD) * 100$	The percentage of interactions that were abandoned with in the first service level.
Accumulative Abandoned and Answered	Uses the above calculations, but as service Thresholds go up, the sum of the previous answered or abandoned is added to the current service Threshold.	The percentage of interactions that were abandoned or answered in a given service level. The last service level will not always have a value of 100 percent, since any interactions that exceeded the last service level threshold will not be counted.

Record selection criteria:

{QueueStats.DINTERVALSTART} in {?DateTime} and
 {QueueStats.CTYPE} = {QueueStats.CTYPE} and
 {QueueStats.CREPORTGROUP} in {?ReportGroup} and
 {QueueStats.SITEID} in {?SiteId} and
 {@StatusTime} IN {?ShiftTime} and
 {QueueStats.CNAME} = {?Workgroup}

Formulas:

All times are expressed as hh:mm:ss. This formula is used throughout the report to convert seconds to hh:mm:ss. This formula is external to the report file.

Ints Answered = The sum of ACD interactions answered.

Ints Offered = The sum of incoming ACD interactions that were offered to the queue.

Ints Aband = The sum of the incoming ACD interaction that were abandoned in the queue.

Avg Wait = The total amount of time the interactions were alerting the agents divided by the total number of ACD interactions answered.

Avg Abandoned Time = The sum of time the interactions were in the queue before abandoning divided by the number of interactions abandoned.

Perc Abandoned = The total number of ACD interactions that were abandoned divided by the total number of interactions that entered the ACD queue. This number is then multiplied by 100 to get the percentage.

Service Levels 1 – 6 = The total number of ACD interactions that were answered within the selected service level divided by the total number of ACD interactions that were answered. This number is then multiplied by 100 to get the percentage.

Abandoned Service Levels 1 – 6 = The total number of ACD interactions that were abandoned in the queue within the selected service level divided by the total number of interactions that entered the queue. This number is then multiplied by 100 to get the percentage.

Queue Period Statistics Abandon Report (Accumulative Percentage) Report

The Queue Period Statistics (QPS) Abandon Report (Accumulative Percentage) displays the accumulated percentages of all ACD interactions abandoned at the various service level thresholds. The service level thresholds are determined by your settings in Interaction Administrator. This report includes interactions answered, interactions entering the queue, and the accumulated percentage of interactions abandoned at each service level threshold.

Parameters

You specify a range of queues, dates, site IDs and the shifts to report on. IC sorts this report by queue, then by date in ascending order, by default. To group or sort a report by other fields, on the **Enter Report Parameters** dialog use the **Report Sort/Group Order 4** page to specify another option.

Formulas:

All times are expressed as hh:mm:ss. This formula is used throughout the report to convert seconds to hh:mm:ss. This formula is external to the report file.

Ints Answered = The sum of ACD interactions answered.

Ints Offered = The sum of incoming ACD interactions that were offered to the queue.

Ints Aband = The sum of the incoming ACD interaction that were abandoned in the queue.

Avg Wait = The total amount of time the interactions were alerting the agents divided by the total number of ACD interactions answered.

Avg Abandoned Time = The sum of time the interactions were in the queue before abandoning divided by the number of interactions abandoned.

Perc Abandoned = The total number of ACD interactions that were abandoned divided by the total number of interactions that entered the ACD queue. This number is then multiplied by 100 to get the percentage.

Service Levels 1 – 6 = The total number of ACD interactions that were answered within the selected service level divided by the total number of ACD interactions that were answered. This number is then multiplied by 100 to get the percentage.

Abandoned Service Levels 1 – 6 = The total number of ACD interactions that were abandoned in the queue within the selected service level divided by the total number of interactions that entered the queue. This number is then multiplied by 100 to get the percentage.

Queue Period Statistics Response Report

The Queue Period Statistics (QPS) Response report displays the percentages of all ACD interactions answered at the various service level thresholds. The service level thresholds are determined by your settings in Interaction Administrator. This report includes interactions answered, interactions entering the queue, and the percentage of interactions answered at each service level threshold.

Parameters

You specify a range of queues, dates, site IDs and the shifts to report on. IC sorts this report by queue, then by date in ascending order, by default. To group or sort a report by other fields, on the **Enter Report Parameters** dialog use the **Report Sort/Group Order 4** page to specify another option.

Report Element

Report Field or Value

Field or Value Description

Site ID

SiteID

The name of the Site ID as specified in the range

Queue

cReportGroup

The name of the distribution queue.

Date

dIntervalStart

The date or time of the interactions entered the distribution queue as specified in the date / time range.

Ints Offered

nEnteredACD

The number of ACD interactions that were offered to the queue.

Ints Answered

nansweredACD

The number of ACD interactions that were answered.

Ints Aband

nAbandonedACD

The number of ACD interactions that were abandoned in the queue.

Perc Aband

$(nAbandonedACD / nEnteredACD) * 100$

The percentage of interactions that were abandoned in the queue.

Average Speed of Answer

$tAnsweredACD / nAnsweredACD$

The average amount of time an interaction spent alerting before it was answered by the agent. The total amount of time the interactions were alerting the agents divided by the total number of ACD interactions answered for the specified range.

Local disconnect

nLocalDisconnectAc

The number of ACD calls that were disconnected locally.

Service Threshold 1

$(nAnsweredACDSvcLvl1 / nAnsweredACD) * 100$

The percentage of interactions that were answered within the first service level. The first service level interval is determined in Interactive Administrator and the default first service level is 10

		seconds.
Service Threshold 2	$(\text{nAnsweredACDSvcLvl2} / \text{nAnsweredACD}) * 100$	The percentage of interactions that were answered within the second service level. The default second service level is 20 seconds.
Service Threshold 3	$(\text{nAnsweredACDSvcLvl3} / \text{nAnsweredACD}) * 100$	The percentage of interactions that were answered within the third service level.
Service Threshold 4	$(\text{nAnsweredACDSvcLvl4} / \text{nAnsweredACD}) * 100$	The percentage of interactions that were answered within the fourth service level.
Service Threshold 5	$(\text{nAnsweredACDSvcLvl5} / \text{nAnsweredACD}) * 100$	The percentage of interactions that were answered within the fifth service level.
Service Threshold 6	$(\text{nAnsweredACDSvcLvl6} / \text{nAnsweredACD}) * 100$	The percentage of interactions that were answered within the sixth service level.
Aband Svc Lvl 1	$(\text{nAbandACDSvcLvl1} / \text{nEnteredACD}) * 100$	The percentage of interactions that were abandoned with in the first service level.
Aband Svc Lvl 2	$(\text{nAbandACDSvcLvl1} / \text{nEnteredACD}) * 100$	The percentage of interactions that were abandoned with in the first service level.
Aband Svc Lvl 3	$(\text{nAbandACDSvcLvl1} / \text{nEnteredACD}) * 100$	The percentage of interactions that were abandoned with in the first service level.
Aband Svc Lvl 4	$(\text{nAbandACDSvcLvl1} / \text{nEnteredACD}) * 100$	The percentage of interactions that were abandoned with in the first service level.
Aband Svc Lvl 5	$(\text{nAbandACDSvcLvl1} / \text{nEnteredACD}) * 100$	The percentage of interactions that were abandoned with in the first service level.
Aband Svc Lvl 6	$(\text{nAbandACDSvcLvl1} / \text{nEnteredACD}) * 100$	The percentage of interactions that were abandoned with in the first service level.
Accumulative Abandoned and Answered	Uses the above calculations, but as service Thresholds go up, the sum of the previous	The percentage of interactions that were abandoned or answered in a given service level. The last service level

answered or abandoned is added to the current service Threshold.

will not always have a value of 100 percent, since any interactions that exceeded the last service level threshold will not be counted.

Record selection criteria for this report includes:

{QueueStats.DINTERVALSTART} in {?DateTime} and
{QueueStats.CTYPE} = {QueueStats.CTYPE} and
{QueueStats.CREPORTGROUP} in {?ReportGroup} and
{QueueStats.SITEID} in {?SiteId} and
{@StatusTime} IN {?ShiftTime} and
{QueueStats.CNAME} = {?Workgroup}

Formulas:

All times are expressed as hh:mm:ss. This formula is used throughout the report to convert seconds to hh:mm:ss. This formula is external to the report file.

Ints Answered = The sum of ACD interactions answered.

Ints Offered = The sum of incoming ACD interactions that were offered to the queue.

Ints Aband = The sum of the incoming ACD interaction that were abandoned in the queue.

Avg Wait = The total amount of time the interactions were alerting the agents divided by the total number of ACD interactions answered.

Avg Abandoned Time = The sum of time the interactions were in the queue before abandoning divided by the number of interactions abandoned.

Perc Abandoned = The total number of ACD interactions that were abandoned divided by the total number of interactions that entered the ACD queue. This number is then multiplied by 100 to get the percentage.

Service Levels 1 – 6 = The total number of ACD interactions that were answered within the selected service level divided by the total number of ACD interactions that were answered. This number is then multiplied by 100 to get the percentage.

Abandoned Service Levels 1 – 6 = The total number of ACD interactions that were abandoned in the queue within the selected service level divided by the total number of interactions that entered the queue. This number is then multiplied by 100 to get the percentage.

Queue Period Statistics Response Report (Accumulative Percentage) Report

The Queue Period Statistics (QPS) Response Report (Accumulative Percentage) displays the accumulated percentages of all ACD interactions answered at the various service level thresholds. The service level thresholds are determined by the settings in Interaction Administrator. This report includes interactions

answered, interactions entering the queue, and the percentage of interactions answered at each service level threshold.

Parameters

You specify a range of queues, dates, site IDs and the shifts to report on. IC sorts this report by queue, then by date in ascending order, by default. To group or sort a report by other fields, on the **Enter Report Parameters** dialog use the **Report Sort/Group Order 4** page to specify another option.

Service Threshold 5	$(nAnsweredACDSvcLvl5 / nAnsweredACD) * 100$	The percentage of interactions that were answered within the fifth service level.
Service Threshold 6	$(nAnsweredACDSvcLvl6 / nAnsweredACD) * 100$	The percentage of interactions that were answered within the sixth service level.
Aband Svc Lvl 1	$(nAbandACDSvcLvl1 / nEnteredACD) * 100$	The percentage of interactions that were abandoned with in the first service level.
Aband Svc Lvl 2	$(nAbandACDSvcLvl1 / nEnteredACD) * 100$	The percentage of interactions that were abandoned with in the first service level.
Aband Svc Lvl 3	$(nAbandACDSvcLvl1 / nEnteredACD) * 100$	The percentage of interactions that were abandoned with in the first service level.
Aband Svc Lvl 4	$(nAbandACDSvcLvl1 / nEnteredACD) * 100$	The percentage of interactions that were abandoned with in the first service level.

Aband Svc Lvl 5	$(nAbandACDSvcLvl1 / nEnteredACD) * 100$	The percentage of interactions that were abandoned with in the first service level.
Aband Svc Lvl 6	$(nAbandACDSvcLvl1 / nEnteredACD) * 100$	The percentage of interactions that were abandoned with in the first service level.
Accumulative Abandoned and Answered	Uses the above calculations, but as service Thresholds go up, the sum of the previous answered or abandoned is added to the current service Threshold.	The percentage of interactions that were abandoned or answered in a given service level. The last service level will not always have a value of 100 percent, since any interactions that exceeded the last service level threshold will not be counted.

Record selection criteria:

{QueueStats.DINTERVALSTART} in {?DateTime} and
 {QueueStats.CTYPE} = {QueueStats.CTYPE} and
 {QueueStats.CREPORTGROUP} in {?ReportGroup} and
 {QueueStats.SITEID} in {?SiteId} and
 {@StatusTime} IN {?ShiftTime} and
 {QueueStats.CNAME} = {?Workgroup}

Formulas:

All times are expressed as hh:mm:ss. This formula is used throughout the report to convert seconds to hh:mm:ss. This formula is external to the report file.

Ints Answered = The sum of ACD interactions answered.

Ints Offered = The sum of incoming ACD interactions that were offered to the queue.

Ints Aband = The sum of the incoming ACD interaction that were abandoned in the queue.

Avg Wait = The total amount of time the interactions were alerting the agents divided by the total number of ACD interactions answered.

Avg Abandoned Time = The sum of time the interactions were in the queue before abandoning divided by the number of interactions abandoned.

Perc Abandoned = The total number of ACD interactions that were abandoned divided by the total number of interactions that entered the ACD queue. This number is then multiplied by 100 to get the percentage.

Service Levels 1 – 6 = The total number of ACD interactions that were answered within the selected service level divided by the total number of ACD interactions that were answered. This number is then multiplied by 100 to get the percentage.

Abandoned Service Levels 1 – 6 = The total number of ACD interactions that were abandoned in the queue within the selected service level divided by the total number of interactions that entered the queue. This number is then multiplied by 100 to get the percentage.

Recorder Scoring Detail Report

The Recorder Scoring Detail Report displays detailed information on quality scoring, grouped by recording and then by Questionnaire. The report shows: if a Questionnaire was marked for Calibration; if there were critical questions, and their scores; and if questions were marked N/A during scoring. The report also displays comments attached to questions during the scoring process.

Parameters

You specify the Recording Date, Questionnaire Name, RecordedIC User, and Scored User as parameters.

Recorder Scoring Summary for Admin Report

This report summarizes the questionnaire scores for each Interaction Recorder questionnaire in the specified range. It lists a summary line for each scored recording under each questionnaire name listed by IC Scorer (reviewer). Recordings that have not been scored will not appear in the list. The summary line provides an overview of how an agent performed on each recorded, scored interaction in the range. To see a report like this sorted by user instead of by IC Scorer, see the Recorder Scoring User Summary for Admin report.

Parameters

Specify a range of questionnaire names, dates/times, and recorded users, to include in the report. IC sorts this report by questionnaire name and IC Scorer. Note that the date/time range refers to the date/time the original recording was made, not the date/time that the recording was scored (graded) by the reviewer.

Report Element

Field or Value Description

Name

The name of a questionnaire included in the "Questionnaire Range or List" parameter. These are predefined in the IR Questionnaire Builder, accessible in Interaction Administrator. Note the IC Scorer (reviewer) is also listed in this field.

Questionnaire Min Score

The overall minimum score possible in this questionnaire. The Min score is defined in the questionnaire builder and it applies to questions scored with Integer, Numeric, True/False, and Multiple Choice types of questions.

Questionnaire Max Score

The overall maximum score possible in this questionnaire. The Max score is defined in the questionnaire builder and it applies to questions scored with Integer, Numeric, True/False, and Multiple Choice types of questions.

IC User

The IC user name as defined in Interaction Administrator

Title

The title given to the recording by Interaction Recorder

Recording Date

The date and time of the original recording.

Media

Indicates the type of interaction. This could be CALL,

	CHAT, EMAIL, or FAX
Score	The final score given to a recording.
Percentile	The final percentile of the scored recording. This is the Score divided by the Questionnaire Max Score.
Rank	If a rank order is specified, the percentile is matched with the ranges in the rank order and the corresponding rank title is shown.
Average Score	The Average Score is displayed for each questionnaire at the end of the report.

Record Selection Criteria:

{VW_ScoringSummary.QUESTIONNAIRENAME} in {?Questionnaire} and
 {VW_ScoringSummary.ICUSERID} in {?User} and
 {VW_ScoringSummary.RECORDINGDATE} in {?DateTime}

Recorder Scoring User Summary for Admin Report

This report summarizes the questionnaire scores for each IC user and Interaction Recorder questionnaire in the specified range. It lists a summary line for each scored recording under each IC User name included in the first column of the report, and is sorted by that name. Recordings that have not been scored will not appear in the list. The summary line provides an overview of how an agent performed on each recorded, scored interaction in the range. To see a report like this sorted by questionnaire instead of by user, see the Recorder Scoring Summary for Admin report.

Parameters

Specify a range of dates/times, users, and questionnaire names to include in the report. IC sorts this report by user name and then by questionnaire name under each user. **Note** that the date/time range refers to the date/time the original recording was made, not the date/time that the recording was scored (graded) by the reviewer.

Legacy Reports

Legacy Reports

The **Legacy Reports** category contains reports that are generated using ActiveReports. The reports in the Legacy Reports category have been replaced in Interaction Reporter in IC Business Manager with new versions built on Crystal Reports. The new Crystal reports can be found in Interaction Reporter under their respective categories. For example, the new Crystal User reports can be found under the User Reports category, and the new Crystal Queue reports can be found under the Queue Reports category.

Wrap Up Codes Report

The Wrap Up Codes Report displays statistics for completed interactions, summarized by group, including: Wrap-up code, Queue, User, or Date. The flexibility in creating this report allows the User to display the groups in any order or not include a group in the report. The report also allows the User to choose to display interaction details. The statistics displayed in this report include:

- Wrap-up code
- Queue

- User
- Date
- Total Interactions
- Total Duration
- Average Duration
- Number of Outbound Interactions
- Outbound Duration
- Average Outbound Duration
- Number of Inbound Interactions
- Inbound Duration
- Average Inbound Duration
- Optional Interaction Details for Date and Total Duration

Parameters

The following parameters can be specified for the Wrap Up Codes report:

- Date Range
- Queue
- User List
- WrapUp Code
- Display Interaction Detail
- Group Order

Sample report

Click on the image below to view a sample of this report.

The screenshot shows a 'Sample Report' from Genesys. The report title is 'Sample Report' and it includes the Genesys logo. Below the title, there is a table with the following columns: Queue, Agent, Application, Interactions, Call Time, % Call Missed, and % Call Answered. The table contains several rows of data, including a summary row for 'All Agents' and several rows for individual agents and queues. The data is presented in a clear, tabular format with alternating row colors for readability.

Line Detail Report

The Line Detail Report displays detailed line statistics. These statistics are grouped and summarized by site, line, month, week, day, and interval. The detailed statistics include:

- Average number of lines available
- Duration of time the line was in use
- Maximum duration a line was available
- Total amount of time the line was in use
- Percentage of time the line was in use
- Total number of calls for a line
- Number of outbound calls on a line
- Percentage of outbound calls on a line
- Average call duration on a line
- Percentage of outbound calls blocked on a line

Parameters

The following parameters can be specified for the Line Detail report:

- Date Time Range
- Line
- Average Lines Available
- Subtotal by (Month or Week #)

Queue Detail Report

The Queue Detail Report displays detailed statistics on Workgroup Queues. The statistics are reported to the interval level of detail. These statistics are grouped and summarized by site, queue, media type, skill (optional), and day. Data for Answered and Abandons is summarized per service levels on each media type.

The detailed statistics include:

- Number of interactions offered
- Number of interactions answered
- Percentage of interactions answered
- Number of interactions abandoned
- Percentage of interactions abandoned
- Average Speed of Answer (ASA)
- Percentage answered in Service Levels
- Average talk time
- Average hold time
- Average ACW time
- Average handle time
- Number of Flow Outs to another queue
- Number of interactions placed on hold
- Data for up to 5 configured Service Levels for Answered and Abandons

Percentage Answered	$(n\text{AnsweredACD} / n\text{EnteredACD}) * 100$
Number Abandoned	nAbandonedACD
Percentage Abandoned	$(n\text{AbandonedACD} / n\text{EnteredACD}) * 100$
Average Speed of Answer	$t\text{AnsweredACD} / n\text{AnsweredAcD}$
Percentage Answer Service Level	$n\text{AnsweredACDSvcLvl} / n\text{AnsweredACD}$
Average Talk Time	$\text{Avg}(t\text{TalkACD} - t\text{HoldACD})$
Average Hold	$\text{Avg}(t\text{HoldACD})$
Average ACW	$\text{Avg}(t\text{ACW})$
Average Handle	$\text{Avg}(t\text{TalkACD} + t\text{ACW})$
Number Flow outs	nFlowOutAcD
Number Holds	nHoldAcD
Answered in Service levels*	nAnsweredAcDSvcLvl
Abandoned in Service levels*	nAbandonAcDSvcLvl

*The report displays up to 5 Answered and Abandoned configured service levels

Queue Service Level Report

The Queue Service Level Report displays the summary and details of the configured service levels, up to 12, in an absolute or cumulative view, with a percentage option. The Summary View includes Answered and Abandoned interactions across all intervals. The Detail View includes Answered and Abandoned interactions per interval, with chart data for each interval.

The summarized statistics include:

- Workgroup
- Media Type
- Service Levels
- Answered Service Level
- Answered Total
- Abandoned Service Levels
- Abandoned Total

Parameters

The following parameters can be specified for the Queue Service Level report:

- Date Time Range
- Workgroup
- Media Type
- Site ID
- Interval Configuration
- Service Level Format
- Show Detail
- Target Service Level Calculation

Sample report

Click on the image below to view a sample of this report.

Queue Summary Report

The Queue Summary Report displays summarized statistical data on Workgroup Queues. These statistics are grouped and summarized by site, media type, and interval. The report also displays a chart for Interactions Distributions and Service Level.

The summarized statistics include:

- Number of interactions offered
- Number of interactions answered
- Percentage of interactions answered
- Number of interactions abandoned
- Percentage of interactions abandoned
- Average Speed of Answer (ASA)
- Percentage answered in Service Levels
- Average talk time
- Average hold time
- Average ACW time
- Average handle time
- Number of Flow Outs to another queue
- Number of interactions placed on hold
- Data for up to 6 configured Service Levels for Answered and Abandons

Parameters

The following parameters can be specified for the Queue Summary report:

- Date Time Range
- Media Type
- Site ID
- Workgroup
- Interval Configuration
- Target Answered Service Level Percentage
- Target Service Level Calculation

User Availability Detail Report

The User Availability Detail report displays information about users in two tables, per user per day, and includes an Overall Summary Duration graph.

- The first table, for each user, displays a summary grouped by status and shows the duration and frequency for each status.
- The second table, for each user, displays detailed information on the changes of states per day, within the specified date and time range.

Parameters

The following parameters can be specified for the User Availability Detail report:

- Status Date
- ACD Logged In
- Company
- After Call Work
- Department
- Do Not Disturb
- Job Title
- Last Name
- Logged In
- Site ID
- Status
- User
- User List

Sample report

Click on the image below to view a sample of this report.

The screenshot shows a 'Sample Report' header with the Genesys logo. Below the header is a table with the following columns: User, Status, Application, Application Available, Max Avail Per User, Max Avail Duration, Availability, Logged In, Call Time, Call Time, Max Avail, Max Avail, % of Max Avail, and % of Max Avail. The table contains several rows of data, including entries for 'User1', 'User2', and 'User3'.

Report Element Descriptions

Report Element	Database Column or Computation
Status Time	Time part of StatusDateTime
Status	StatusKey
Duration	LoggedIn
Status group	StatusGroup
Logged in flag	If LoggedIn = 1 then true else false
Non ACD flag	If AcdLoggedIn = 0 then true else false

DND flag	StatusDnd
ACW flag	StatusAcw
Available	Computed: sum of duration if status group is Available
Break	Computed: sum of duration if status group is Break
Follow Up	Computed: sum of duration if status group is Follow up
Unavailable	Computed: sum of duration if status group is Unavailable
Training	Computed: sum of duration if status group is Training

User Availability Summary Report

The User Availability Summary report displays the following information for a user:

- A pie chart that summarizes the user's ACD vs. Non ACD durations for the Date and Time period of the report
- A comparative chart of the summary of time in the Status groups: Available, Break, Follow Up, Unavailable, and Training
- A table displaying the user's first logon time of the day and the total daily durations for: Logged In, Non ACD, DND, ACW, Available status, Break status, Follow Up status, Unavailable status, and Training status

Parameters

The following parameters can be specified for the User Availability Summary report:

- Status Date
- Duration
- Last Name
- Site ID
- Status
- User
- User List

Sample Report

Click on the image below to view a sample of this report.

The screenshot shows a 'Sample Report' header with the GENESYS logo. Below the header is a table with the following columns: Status, Program Available, Duration Per Line, Max Avail Duration, Utilization, %, Yearly Util, Calls Tot, Avg Avail Duration, Max Avail Element, % Utilization, and % Not Monitored. The table contains several rows of data, including a summary row for 'Group' and 'Total'.

Report Element Descriptions

Report Element	Database Column or Computation
Date	Datepart of StatusDateTime
Logged At	Earliest time of the day in logged in status
Logged In	Sum of LoggedIn duration per day
Non ACD	If AcdLoggedIn = 0 then true else false
DND	StatusDnd
ACW	StatusAcw
Available status	Computed: sum of duration if status group is Available
Break status	Computed: sum of duration if status group is Break

Follow up status	Computed: sum of duration if status group is Follow up

User Call Detail Report

The User Call Detail report displays detailed data for each agent on interactions—calls, e-mails, and chats—for the specified date and period of time.

The information in this report is displayed for each user, by day, including:

- Initiated time
- Connected time
- Media type—such as: call, e-mail, chat, social conversation
- Direction—Intercom, Inbound, Outbound
- Type—Intercom or External
- Remote Number
- Remote Name
- Duration
- Hold Time
- Account Code

Parameters

The following parameters can be specified for the User Call Detail report:

- Date/time Connected

- Date/time Initiated
- Account code
- Call Direction
- Call Duration
- Call Type
- Hold Time
- Caller ID
- Interaction Direction
- Media Type
- Remote Name
- Remote Number
- Site ID
- User
- User List

Sample report

User Call Summary Report

The User Call Summary report displays summarized interaction data for each agent within the specified period of time. The summarized data is displayed in a table and a pie chart.

The table displays the information for each user, by day, including:

- Number, duration, and average duration of interactions—such as: calls, chats, e-mails, and social conversation
- Number, duration, average duration, and call type—External or Intercom—for Inbound interactions
- Number, duration, average duration, and call type—External or Intercom—for Outbound interactions

The pie chart displays a comparison of percentages of the types of interactions for the user within the specified period of time, by:

- Inbound/External
- Inbound/Intercom
- Outbound/External
- Outbound/Intercom

Parameters

The following parameters can be specified for the User Call Summary report:

- Date/Time Connected
- Date/Time Initiated
- Call Type
- Call Direction
- Media Type
- Site ID
- User
- User List

User Productivity Summary Report

The User Productivity Summary Report displays summarized statistics related to users for the specified Date and Time. The summarized data is displayed in tables and a graph.

The **Summaries Per User** table displays a statistical summary of counts, percentages, and durations for each user, including:

- The number of interactions Offered
- The number and percentage of interactions Answered
- The number and percentage of interactions Abandoned
- The number and percentage of Flow Outs
- The number and percentage of interactions Transferred
- The Duration and Average for Talk Time
- The Duration and Average for Hold Time
- The Duration and Average for ACW Time
- The Duration and Average for Handle Time
- The number and average of Non-ACD interactions Inbound
- The number and average of Non-ACD interactions Outbound

This table also displays the Grand Totals of these statistics.

The **Summaries Per User and Queue** table displays all the statistical information from the **Summaries Per User** table with the addition of agent queue statistics, including Totals.

Parameters

The following parameters can be specified for the User Productivity Summary report:

- Date
- Media Type
- User
- Site ID
- User List
- DNIS

Line Group Detail Report

The Line Group Detail Report displays detailed statistics of line groups. These statistics are grouped and summarized by site, line, month, week, day, and interval. The detailed statistics include:

- Average lines available
- Duration per line
- Maximum available duration
- Utilization duration and percentage
- Total number of calls
- Number and percentage of calls out
- Average call duration
- Maximum calls entered
- Percentage of all busy
- Percentage of outbound calls blocked

Parameters

The following parameters can be specified for the Line Group Detail report:

- Date Time Range
- Line Group
- Site ID
- Subtotal By (Month or Week #)

Sample report

Quality Scoring Details Report

The Quality Scoring Details Report displays detailed information on quality scoring, grouped by recording and then by Questionnaire. The report shows: if a Questionnaire was marked for Calibration; if there were critical questions, and their scores; and if questions were marked N/A during scoring. The report also displays comments attached to questions during the scoring process. The detailed information in the report includes:

- Recording Date
- Media
- Questionnaire Name

Passed/Failed	IsFailed=0 "Passed", IsFailed=1 "Failed", IsFailed=NULL Hidden
Form Score	CombinedScore
Percentile	CombinedPercentileScore
Rank	RankName

Calibration Recording Summary Report

The Calibration Recording Summary Report aggregates scores across all the scorecards for a specific questionnaire and identifies anomalies in the responses.

The detailed information in the report includes:

- Questionnaire Directory
- Questionnaire Name
- Questionnaire Notes
- Media Type
- Recorded Date
- Recording ID
- Interaction ID Key
- Initiation Policy
- Recording Length
- Direction
- Number of Scorecards
- Average Score
- Median Score
- Highest Score
- Lowest Score
- Score Variance

Parameters

The following parameters can be specified for the Calibration Recording Summary Report.

- Recording Date/Time
- Questionnaire Name
- Interaction ID Key
- Media Type
- Recording ID
- Scored User
- Scoring User
- Workgroup Queue
