# PureConnect Al-Powered WFM

## **Technical Reference**

#### **Abstract**

This document describes the AI-powered workforce management features in PureConnect and provides overview, requirements, and configuration instructions for administrators.

For the latest version of this document, see the PureConnect Documentation Library at: http://help.genesys.com/pureconnect.

For copyright and trademark information, see

https://help.genesys.com/pureconnect/desktop/copyright\_and\_trademark\_information.htm.

## **Introduction to PureConnect AI-Powered Workforce Management**

The artificial intelligence (AI)-powered workforce management features for PureConnect are hosted in Genesys Cloud. The features are available to PureConnect users in Interaction Optimizer.

Interaction Optimizer includes two Al-powered workforce management services for PureConnect:

- The Genesys Cloud Al-powered forecasting service determines contact center load based on historical data and determines the load for the selected week. For more information about Al-powered forecasting, see <a href="Introduction to Al-Powered Workforce">Introduction to Al-Powered Workforce</a> Management Forecasting.
- The Genesys Cloud Al-powered scheduling service automatically and quickly predicts the best possible staffing schedules. For more information about Al-powered forecasting, see <a href="Introduction to Al-Powered Workforce Management Scheduling">Introduction to Al-Powered Workforce Management Scheduling</a>.

Contact your account executive to start the process to enable the Al-powered features.

#### **Genesys Cloud**

Genesys Cloud is a cloud collaboration, communications, and customer engagement product that takes full advantage of the distributed nature of the cloud. PureConnect integrates with Genesys Cloud to provide access to the Al-powered workforce management features.

The integration between PureConnect and Genesys Cloud is seamless for users, but requires configuration by an administrator. For more information, see <a href="Configuration Overview">Configuration Overview</a>.

## **Configuration**

#### **Configuration Overview**

To configure PureConnect Al-powered WFM services, an administrator needs to:

- Confirm that the requirements are met. See Requirements.
- Load the WFM Al-Powered feature license. See License Requirement.
- Gather the required organization information for your Genesys Cloud organization. See Genesys Cloud Organization.
- Configure the integration between PureConnect and Genesys Cloud in Interaction Administrator. See <u>Cloud Configuration in Interaction Administrator</u>.
- Restart the Interaction Optimizer service using IC System Manager.

Once the PureConnect integration with Genesys Cloud configuration is complete, IC Business Manager is ready for Al-powered forecasting and scheduling.

#### Requirements

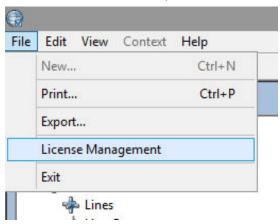

- PureConnect 2019 R2 for Al-powered forecasting.
- The WFM AI-Powered feature license. See License Requirement.
- A Genesys Cloud Tier 3 organization, which is created for you during the process of enabling the Al-powered features. Contact your account executive for more information. If you have an existing Genesys Cloud organization, you may need to upgrade it to Tier 3.

### **License Requirement**

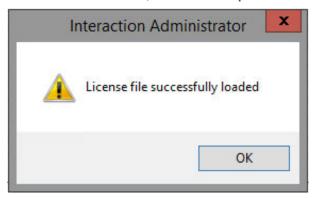

The PureConnect Al-powered WFM service requires you to load the license file provided to you by your account executive. The file contains the WFM\_Al\_POWERED feature license..

To load the license file:

1. In Interaction Administrator, open File > License Management.

- 2. Click Load License.
- 3. Browse for the license file, and then click **Open** to load the license.

For general information about licensing, see the <u>PureConnect Licensing Technical Reference</u>.

#### **Genesys Cloud Organizations**

The Al-powered workforce management features requires a Genesys Cloud organization. When enabling the feature for you, Genesys creates your Genesys Cloud organization. Your CIC server can integrate with only one organization.

You need to know the following information about your organization before you continue with the configuration.

- Administrator email address
- Administrator password
- Organization long name the name used to create the Genesys Cloud organization
- Organization short name the name generated from the organization long name in compliance with DNS restrictions (a-z, 0-9, A-Z)

#### Note:

If you are unsure of the organization short name, log in to Genesys Cloud at <a href="https://login.mypurecloud.com">https://login.mypurecloud.com</a> and navigate to Admin>Account Settings>Organization Settings. Both the organization long name and short name are listed here.

Region

#### **Cloud Configuration in Interaction Administrator**

The Al-powered WFM features use services that are hosted in the Genesys Cloud platform, so using these features requires the configuration of a bridge between PureConnect and Genesys Cloud.

You can configure the bridge in Interaction Administrator. For more information, see the <u>Genesys Cloud for PureConnect Administrator's Guide</u> or the <u>Interaction Administrator help</u>.

#### Important:

Once you configure the bridge and successfully test the connection, restart the Interaction Optimizer service using IC System Manager.

## **AI-Powered Forecasting**

#### **Introduction to AI-Powered Workforce Management Forecasting**

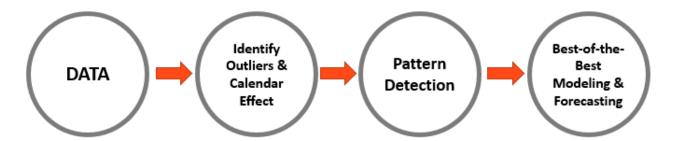

Al-powered workforce management forecasting in PureConnect is available in Interaction Optimizer. Interaction Optimizer includes a forecasting option to use the cloud-based Al-powered forecasting service. Interaction Optimizer sends historical data to the service and, based on that data, the service determines outliers and missing data. The service chooses the best forecasting method to use and which parameters to use within the selected method. The service supports weekly forecasting.

For information about using the forecasting method, see the Interaction Optimizer help.

The Al-powered forecasting service provides users with an easy-button approach to an otherwise complex operation of predicting the workload and service time of agents for contact center planning.

The automated forecasting service does the following:

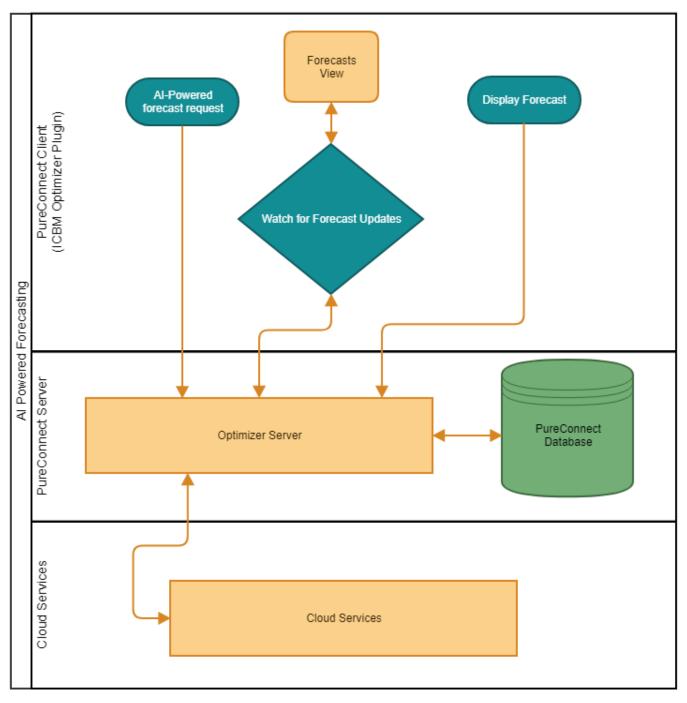

- Performs data transformation and clean-up
- Detects and deals with outliers and holiday effects
- Detects seasonality and trend patterns
- Optimizes using multi-fold cross-validation to select the best of many algorithms

Because it is cloud-based, updates to the forecasting service are automatically applied. The service is continuously evolving and growing with a continuous infusion of the most cutting edge algorithms in the library and inspired by the latest research in the field. Genesys leverages best practices in data science and in the industry.

#### **Data Flow**

This diagram describes how forecasting data flows between the Interaction Optimizer client in IC Business Manager, the Optimizer server, the PureConnect database, and the Genesys Cloud Al-powered forecasting service.

PureConnect provides communication services to enable the integration between PureConnect and Genesys Cloud.

#### Handling of Data Issues, Outliers, and Calendar Events

When creating a forecast, the Al-powered forecasting service takes into account the following:

- Missing data such as non-responses, unavailability of information, or issues due to system failures or human errors.
- Outliers -- data that falls outside of the expected data range (outliers).
- · Holidays and special calendar events, seasonal variations, trends, and variations in operating hours.
- · Leading and/or trailing zeroes in data.
- Other issues, such as Daylight Saving Time, time zones, leap years, and more.

The service considers all of these data issues and normalizes the data accordingly when creating forecasts.

#### **Database Parameters for Al-powered Forecasting**

To change the values assigned to these database parameters, a database administrator can use the database scripts located on the CIC Utilities and Downloads page of the product information site.

#### AlForecastingHistoricalWeekCount

This parameter indicates the number of weeks of historical data to use when creating a forecast. To drive the best Al-powered forecast, the default is 156 weeks. To use a smaller data set, decrease this value. The minimum value is 1 and the maximum is 156.

#### AlForecastingEarliestPastDataDate

Use this parameter to set a minimum date for data extraction. This blocks the capturing of data from time periods prior to the minimum date.

For example, suppose a company changed their interaction routing on January 11th, 2019. The change in routing could cause changes to forecasting. They can set this parameter to that date so that only data for the new interaction routing method is used.

#### **AlForecastingHistoryBatchSize**

Use this parameter only with guidance from Customer Care. Its purpose is to fine-tune the way historical data is extracted from the database. The minimum value is 1 and the maximum value is 8.

#### AlForecastingInjectionBatchSize

Use this parameter only with guidance from Customer Care. Its purpose is to fine-tune how forecasts are written to the database. The minimum value is 250 and the maximum value is 2000.

#### **Troubleshooting**

#### **Error Strings**

In the event that something goes wrong when generating Al-powered forecasts, these are the error strings you might see. These error strings are displayed when you attempt to open a failed forecast.

| Error String   | Description  | What To Do   |
|--|--|--|
| A failure occurred generating the Al-powered forecast. If the issue persists, contact your administrator to consult the IC Business Manager and server logs for additional details.                      | An unknown failure occurred during the forecasting process   | Review related logs in Interaction Optimizer.  |
| Forecast generation is still in progress and must complete before the selected forecast can be opened.   | Al-powered forecasts cannot be opened until they are done processing. Wait for the completed status.                                     | Wait for the forecast to complete processing.  |
| An error occurred while trying to authenticate to the Al-powered forecasting cloud service. Contact your administrator to verify the Genesys Cloud configuration has been properly set up on the system. | An authentication error occurred when connecting to Genesys Cloud.   | In Interaction Administrator, verify that the Genesys Cloud configuration has been completed and ensure that clicking Test Genesys Cloud Connection results in a successful connect.   |
| A network issue occurred while communicating with the Al-powered forecasting cloud service. Try again. If the error persists, contact your administrator to review Interaction Optimizer server logs.    | A network issue occurred and PureConnect could not communicate with the cloud.   | <ul> <li>Ensure that the network is functional and the PureConnect server(s) have access to the internet.</li> <li>In Interaction Administrator, verify that the Genesys Cloud configuration has been completed and ensure that clicking Test Genesys Cloud Connection results in a successful connect.</li> </ul> |
| The Al-powered forecasting cloud service experienced an unexpected error while processing the forecast data. Contact your administrator to review logs to determine the issue with the service.          | An unknown error occurred while processing the forecast request in the cloud services.   | <ul> <li>Review the PureConnect Interaction<br/>Optimizer logs for details.</li> <li>Provide Customer Care with requested<br/>logs and database information so they<br/>can review the errors in the forecasting<br/>service.</li> </ul>   |
| A database operation failed while extracting data from PureConnect. Contact your administrator to review Interaction Optimizer server logs.  | An issue occurred on the PureConnect side while trying to extract history from the database.   | <ul> <li>Ensure that the database is operating correctly.</li> <li>Review the PureConnect Interaction Optimizer logs for any details.</li> <li>Provide Customer Care with requested logs and database information so they can review the errors in the forecasting service.</li> </ul>                             |
| An error occurred while generating the Alpowered forecast request. Contact your administrator to review Interaction Optimizer server logs.   | An issue occurred on the PureConnect side while attempting to generate the request that would have been sent to the cloud service.       | <ul> <li>Ensure that the database is operating correctly.</li> <li>Review the PureConnect Interaction Optimizer logs for any details.</li> <li>Provide Customer Care with requested logs so they can review the errors in the forecasting service.</li> </ul>  |
| An error occurred while parsing the Al-powered forecast. Contact your administrator to review Interaction Optimizer server logs.   | A response was successfully received from the cloud service, however PureConnect is having an issue processing the received information. | <ul> <li>Review the PureConnect Interaction<br/>Optimizer logs for any details.</li> <li>Provide Customer Care with requested<br/>logs so they can review the errors in the<br/>forecasting service.</li> </ul>  |
| A database operation failed while storing the Alpowered forecast. Contact your administrator to review Interaction Optimizer server logs.  | The forecast was generated but could not be created due to a PureConnect database issue.   | Ensure that the database is operating correctly.     Review the PureConnect Interaction Optimizer logs for any details.  |

## **AI-Powered Scheduling**

#### **Introduction to AI-Powered Workforce Management Scheduling**

Al-powered workforce management scheduling in PureConnect is available in Interaction Optimizer. Interaction Optimizer sends scheduling data to a Genesys Cloud service and, based on the provided data, the service does the following:

- Automatically creates advanced AI modeling by deriving customer behavior and its relationship with service performance and changes in queue workload.
- Leverages the advanced AI modeling to ensure accurate staffing requirements and performance predictions.
- Leverages mathematical optimization to ensure optimization of generated schedules.

For information about using the forecasting method, see the Interaction Optimizer help.

When Genesys creates your Genesys Cloud organization, it should have the Genesys Cloud **wfmAiPoweredScheduling** product key assigned, with the following permissions:

- wfm:adhocModel:add
- wfm:adhocModel:view
- wfm:schedulingrequest:add
- · wfm:schedulingrequest:view

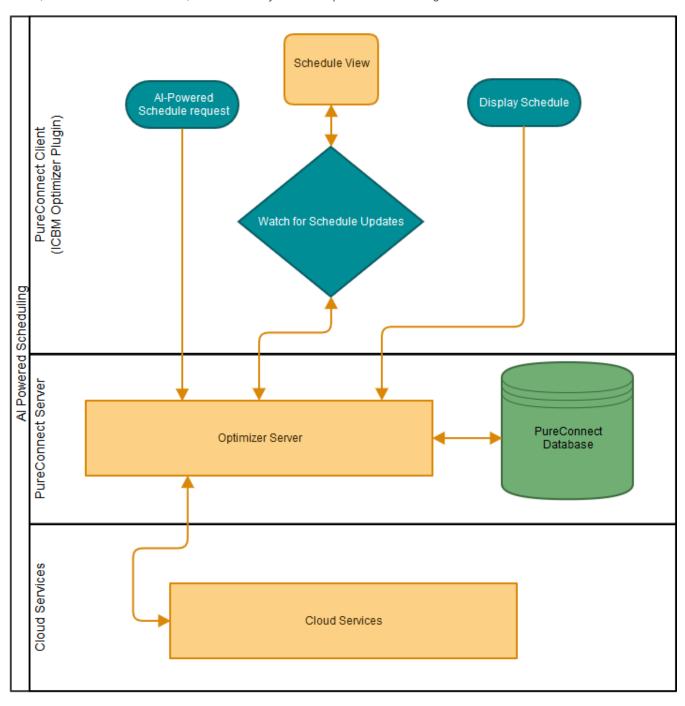

Alternatively, you can assign All Permissions for scheduling:

Workforce Management>Adhoc Scheduling > All Permissions

For more information about Genesys Cloud organizations, see **Genesys Cloud Organization**.

#### **Data Flow**

This diagram describes how scheduling data flows between the Interaction Optimizer client in IC Business Manager, the Optimizer server, the PureConnect database, and the Genesys Cloud Al-powered scheduling service.

#### **Database Parameters for AI-Powered Scheduling**

To change the values assigned to these database parameters, a database administrator can use the database scripts located on the <a href="CIC Utilities and Downloads">CIC Utilities and Downloads</a> page of the product information site.

#### AlModelExpiryInDays

Use this parameter to set the expiration period in days for model response from the Genesys Cloud service, which is saved on the CIC server. If the model is past its expiration date, then the Al-powered scheduling service requests a new model response from Genesys Cloud. Otherwise, the service uses the saved model response. The default value is 7 days. The minimum value is 1 and the maximum value is 180.

#### AIStatusNotFoundMaxRetryInHrs

Use this parameter to set the maximum number of hours to retry an Al-driven request when the response from Genesys Cloud results in http status 404 (not found). The default value is 12 hours. The minimum value is 1 and the maximum value is 96.

#### **Troubleshooting**

#### **Error Strings**

In the event that something goes wrong when generating Al-powered schedules, these are the error strings you might see. These error strings are displayed when you attempt to open a failed schedule.

| Error String  | Description  | What To Do   |
|---|--|--|
| A failure occurred generating the Al-powered schedule. If the issue persists, contact your administrator to consult the IC Business Manager and server logs for additional details.                     | An unknown failure occurred during the scheduling process  | Review related logs in Interaction Optimizer.  |
| Schedule generation is still in progress and must complete before the selected schedule can be opened.  | Al-powered schedules cannot be opened until they are done processing. Wait for the completed status.                                     | Wait for the schedule to complete processing.  |
| An error occurred while trying to authenticate to the Al-powered scheduling cloud service. Contact your administrator to verify the Genesys Cloud configuration has been properly set up on the system. | An authentication error occurred when connecting to Genesys Cloud.   | In Interaction Administrator, verify that the Genesys Cloud configuration has been completed and ensure that clicking Test Genesys Cloud Connection results in a successful connect.   |
| A network issue occurred while communicating with the Al-powered forecasting cloud service. Try again. If the error persists, contact your administrator to review Interaction Optimizer server logs.   | A network issue occurred and PureConnect could not communicate with the cloud.   | <ul> <li>Ensure that the network is functional and the PureConnect server(s) have access to the internet.</li> <li>In Interaction Administrator, verify that the Genesys Cloud configuration has been completed and ensure that clicking Test Genesys Cloud Connection results in a successful connect.</li> </ul> |
| The Al-powered scheduling cloud service experienced an unexpected error while processing the schedule data. Contact your administrator to review logs to determine the issue with the service.          | An unknown error occurred while processing the scheduling request in the cloud services.   | <ul> <li>Review the PureConnect Interaction         Optimizer logs for details.</li> <li>Provide Customer Care with requested         logs and database information so they         can review the errors in the scheduling         service.</li> </ul>  |
| A database operation failed while extracting data from PureConnect. Contact your administrator to review Interaction Optimizer server logs.   | An issue occurred on the PureConnect side while trying to extract scheduling data from the database.                                     | <ul> <li>Ensure that the database is operating correctly.</li> <li>Review the PureConnect Interaction Optimizer logs for any details.</li> <li>Provide Customer Care with requested logs and database information so they can review the errors in the forecasting service.</li> </ul>                             |
| An error occurred while generating the Alpowered schedule request. Contact your administrator to review Interaction Optimizer server logs.  | An issue occurred on the PureConnect side while attempting to generate the request that would have been sent to the cloud service.       | <ul> <li>Ensure that the database is operating correctly.</li> <li>Review the PureConnect Interaction Optimizer logs for any details.</li> <li>Provide Customer Care with requested logs so they can review the errors in the scheduling service.</li> </ul>   |
| An error occurred while parsing the Al-powered schedule. Contact your administrator to review Interaction Optimizer server logs.  | A response was successfully received from the cloud service, however PureConnect is having an issue processing the received information. | Review the PureConnect Interaction Optimizer logs for any details. Provide Customer Care with requested logs so they can review the errors in the scheduling service.  |
| A database operation failed while storing the Alpowered schedule. Contact your administrator to review Interaction Optimizer server logs.   | The schedule was generated but could not be created due to a PureConnect database issue.   | Ensure that the database is operating correctly.     Review the PureConnect Interaction Optimizer logs for any details.  |

## **Change Log**

The following changes have been made to the PureConnect Al-Powered WFM Technical Reference since its initial release.

| Date              | Changes   |
|-------------------|---|
| 14-May-2019       | Created.  |
| 24-July-2019      | Added Al-Powered Scheduling                                 |
| 8-November-2019   | Updated to use the new Genesys Cloud bridge for PureConnect |
| 24-August-2020    | Renamed PureCloud to Genesys Cloud                          |
| 17-September-2020 | Added scheduling parameters to TOC                          |
